MONTHLY - MENSUEL

ADVANCE NOTICE - AVERTISSEMENT

DECEMBER - 1974 - DÉCEMBRE

Prices Division is about to introduce a major revision of the Industry Selling Price Indexes, moving the time and weight bases from 1961 = 100 to 1971 = 100. The most notable features of the revision are:

- (1) the introduction of 1971 time and weight bases;
- (2) a switch to the 1970 Standard Industrial Classification;
- (3) an increase in the number of industries and commodities compared with the 1961 = 100 based series;
- (4) better price samples for continuing series;
- (5) where feasible, establishment of weighting to take into account the relative importance of each company's shipments in 1971.

The revised series will supersede those previously published and become the official Industry Selling Price Indexes of Manufacturing as of May 1975. Indexes from 1971 forward will reflect the relative importance of commodities sold by Canadian Industries in 1971. Previously published indexes for the period prior to 1971 will be arithmetically converted to a 1971 = 100 base and appear together with cross reference identification codes from the old to the new series in a special supplement to the May Issue of "Prices and Price Indexes" Catalogue No. 62-002.

A detailed reference paper on the revision will be published in the near future.

La Division des prix s'apprête à effectuer une révision en profondeur des indices des prix de vente dans l'industrie en alignant la période de référence et la base de pondération de 1961 = 100 sur 1971 = 100. Les principales caractéristiques de cette révision sont:

- 1) l'introduction de la période de référence et de la base de pondération 1971 = 100;
- 2) l'emploi de la Classification des activités économiques de 1970;
- 3) l'accroissement du nombre d'industries et de produits par rapport aux séries utilisant l'ancienne base (1961 = 100);
- 4) des échantillons de prix plus représentatifs pour les séries continues;
- 5) l'établissement, là où c'est possible, de schémas de pondération permettant de prendre en compte l'importance relative des livraisons de chaque société en 1971.

Les séries révisées remplaceront celles publiées auparavant et deviendront à compter de mai 1975 les indices officiels des prix de vente dans l'industrie (fabrication). À partir de 1971, les indices traduiront l'importance relative des produits vendus par les industries canadiennes en 1971. Les indices parus antérieurement pour la période précédant 1971 seront ramenés arithmétiquement sur la base 1971 = 100 et ils seront publiés, avec des codes d'identification permettant de passer des anciennes séries aux nouvelles, dans un supplément spécial de la livraison de mai de la publication n° 62-002 intitulée Prix et indices des prix.

Un document de référence détaillé sur la révision paraîtra bientôt.

NOTE TO USERS REGARDING CONSTRUCTION PRICE STATISTICS

AVIS AUX UTILISATEURS DES STATISTIQUES DES PRIX DE LA CONSTRUCTION

DECEMBER - 1974 - DÉCEMBRE

Beginning with the January 1975 issue of Prices & Price Indexes Tables 18 to 26 inclusive will be omitted from this publication. These construction-oriented statistics are now available in summary form in a monthly bulletin, Construction Price Statistics, publication 62-007, \$4.00 per year. Users wanting full detail may prefer to subscribe to the quarterly report Construction Price Statistics publication 62-008, \$5.60 per year.

A compter du numéro de janvier 1975, la publication Prix et indices ne comportera plus les tableaux 18 à 26 inclusivement. On peut maintenant consulter une version abrégée de ces statistiques reliées à la construction dans un bulletin mensuel intitulé Statistiques des prix de la construction n° 62-007 au catalogue, \$4.00 par année. Les utilisateurs intéressés par des statistiques plus détaillées préféreront peut-être s'abonner au bulletin trimestriel Statistiques des prix de la construction n° 62-008 au catalogue, \$5.60 par année.

NOTES ON PRICES AND PRICE INDEX NUMBERS

Industry Selling Price Index: Manufacturing (1961=100)

The industry selling price index (Total Manufacturing) moved 1.6% higher in July to 172.7 from the June index 169.9.

In terms of the relative contribution to the overall change in the total manufacturing index, the more notable changes were increases recorded in food and beverages group (1.9%), particularly in the slaughtering and meat packing industry (3.4%). Price increases recorded in the corrugated box manufacturers industry (9.5%) were mainly responsible for advances in the paper and allied products group (8.0%). Increases also occurred in the chemical products group (3.2%) reflecting higher prices registered in the manufacturers of mixed fertilizers industry.

Decreases were recorded in the miscellaneous manufacturers group (-2.7%) as a result of lower prices recorded in the jewellery and silverware industry (-4.6%). Slight decreases were also evident in the wood products group with sawmills and planing mills industry declining (-1.6%).

NOTES SUR LES PRIX ET LES INDICES DE PRIX

Indice des prix de ventes dans l'industrie: industries manufacturières (1961=100)

L'indice des prix de vente dans l'industrie (ensemble des industries manufacturières) a progressé de 1.7% en juillet (172.7) par rapport à juin (169.9).

En ce qui a trait à l'apport relatif des groupes à la variation globale de l'indice des industries manufacturières, les changements les plus remarquables ont été des augmentations dans le groupe des aliments et boissons (1.9%), particulièrement dans l'industrie de l'abattage et du conditionnement de la viande (3.4%). Les augmentations de prix relevées dans l'industrie des boîtes en carton ondulé (9.5%) ont été le principal facteur de la progression dans le groupe du papier et des activités annexes (8.0%). Il y a également eu des accroissements dans le groupe des produits chimiques (3.2%) traduisant des augmentations de prix dans l'industrie des engrais mélangés.

On signale des diminutions dans le groupe des industries manufacturières diverses (-2.7%) par suite de baisses de prix dans l'industrie de la bijouterie et l'orfèvrerie (-4.6%). De légères baisses se sont également manifestées dans le groupe des produits du bois, où les scieries et les ateliers de rabotage ont subi une diminution (-1.6%).

General Wholesale Price Index (1935-39=100)

The general wholesale price index rose 2.2% in July to 462.5 from the revised June index of 452.5 with increases evident in all eight major group indexes.

The wood products group index rose 4.4% in July to 583.0 from 558.2 on higher prices for wood pulp, whose index rose 13.2% between June and July. It was 63.0% higher than July 1973. An advance of 2.8% to 342.2 from the revised June index of 332.9 in non-metallic minerals reflected price increases for sulphur, tumblers and coke. Higher prices for cured meats, livestock and hides & skins were chiefly responsible for an increase of 2.6% to 497.2 from revised 484.6 in the animal products group index. The vegetable products group index moved 2.4% higher to 464.2 from revised 453.3 on price increases for vegetable oil products, grains and canned fruits. Advances of a lesser degree were recorded in four major group indexes, chemical products 1.9% to 322.0 from revised 316.0, iron products 0.9% to 448.2 from 444.1, textile products 0.4% to 428.8 from revised 427.3 and non-ferrous metals 0.1% to 428.7 from revised 428.3.

Indice général des prix de gros (1935-39 = 100)

L'indice général des prix de gros a atteint 462.5 en juillet soit 2.2% de plus que l'indice rectifié de juin (452.5), suite à des augmentations qui se sont manifestées dans les indices de chacun des huit principaux groupes.

L'indice du groupe des produits du bois a monté de 4.4% en juillet pour atteindre 583.0, contre 558.2, par suite d'augmentations dans le cas de la pâte de bois, dont l'indice a progressé de 13.2% entre juin et juillet. Il était également de 63.0% plus élevé qu'en juillet 1973. Une progression de 2.8% qui a fait passer à 342.2 l'indice rectifié de juin (332.9) des minéraux non métalliques traduisait des augmentations de prix du soufre, des verres sans pied et du coke. Les hausses de prix des viandes traitées, des bestiaux et des cuirs et peaux sont les principaux facteurs d'une augmentation de 2.6% qui a fait passer l'indice du groupe des produits d'origine animale de 484.6 (chiffre rectifié) à 497.2. L'indice du groupe des produits d'origine végétale a augmenté de 2.4% pour atteindre 464.2 par rapport à l'indice rectifié de 453.3, par suite d'augmentations du prix de l'huile de table, des céréales et des fruits en conserve. Il y a eu des augmentations de moindre importance dans les indices de quatre grands groupes: l'indice des produits chimiques est passé de 316.0 à 322.0 (1.9%), celui des produits du fer de 444.1 à 448.2 (0.9%), celui des produits textiles de 427.3 à 428.8 (0.4%) et celui des métaux non ferreux de 428.3 (rectifié) à 428.7 (0.1%).

Security Price Indexes (1961=100)

The investors' index of common stock prices fell 3.1% in 1961 from 161.0 in June to 156.0 in July. This index stood at 184.0 a year ago, which means a 15.2% year-to-year decrease. Of the three major groups, industrials decreased 2.4% to 166.8, utilities 3.5% to 119.9 and finance 6.5% to 154.9. All of the 13 industrial sub-groups showed a loss, except petroleum and chemicals which went up 2.0% and 0.8% respectively. All utilities went down, except telephone, with a 10.6% decrease not recorded for electric power. The setback in the finance index is accounted for by a 7.0% loss in banks, which stood at 185.1 and by a 4.7% loss in investment and loan (106.7).

Over the same period, the mining index grew 2.3% to 242.2; golds increased 7.7% to 242.2, and base metals fell 1.6% to 87.5.

As far as the two supplementary indexes are concerned, uraniums fell 1.1% from 241.7 to 239.0 and primary metal and gas went down 4.4% to 314.6.

The preferred stock index fell 4.0% to 62.0.

Canadian Farm Products Index (1935-39=100)

The price index of Canadian farm products at terminal markets advanced 1.5% to 528.5 in July, from the revised index of 520.9. The animal products index moved 4.1% up to 583.6 from a revised index of 560.6 on price increases for hogs and steers on both markets, for cheesemilk in the East and lambs in the West. Lower prices were shown for hogs and poultry in the East, and calves, raw wool and lamb in the West.

The field products index declined 1.6% to 473.3 from 481.2 reflecting lower prices for hay and potatoes on both markets, and for barley and wheat in the East. Higher prices were shown for rye on both markets, and for corn in the East and flax in the West.

Thirty Industrial Materials Price Index (1935-39=100)

The price index of thirty industrial materials, calculated as an unweighted geometric average, moved up 1.2% to 497.9 in July from the revised June index of 491.8. Prices were higher for twelve commodities, lower for six and unchanged for twelve. Principal changes included increases for hogs, steel scrap, structural shapes, steers, wheat, iron ore, crude oil, bleached sulphite pulp, raw sugar, crude oil, oats, unbleached sulphite pulp while decreases were recorded for rubber, tin, raw wool, raw cotton, spruce lumber and

Indices des cours des valeurs mobilières (1961=100)

L'indice des cours de placement des actions ordinaires a baissé de 3.1% passant de 161.0 en juin à 156.0 en juillet. Le même indice se situait à 184.0 à pareille date l'an passé, ce qui représente une diminution annuelle de 15.2%. Parmi les trois grands groupes, les valeurs industrielles ont diminué de 2.4% pour se fixer à 166.8, les services publics ont baissé de 3.5% pour s'inscrire à 119.9 et les valeurs de finances ont perdu 6.5% pour s'établir à 154.9. Les treize sous-groupes industriels ont tous diminué sauf le pétrole et les produits chimiques qui ont augmenté de 2.0% et 0.8% respectivement. Les services d'utilité publique ont tous diminué sauf le téléphone; une baisse de 10.6% est à signaler dans le cas de l'énergie électrique. La diminution de l'indice des finances est attribuable à une baisse des valeurs bancaires de 7.0% pour se fixer à 185.1 et à une perte de 4.7% des valeurs des placements et des prêts (106.7).

Au cours de la même période, l'indice du cours des titres miniers a augmenté de 2.3% pour s'établir à 242.2; les aurifères ont augmenté de 7.7% (242.2), et les métaux communs ont baissé de 4.8% (87.5).

En ce qui a trait aux deux indices supplémentaires, l'uranium a diminué de 1.1% (de 241.7 à 239.0); le pétrole et le gaz primaires ont baissé de 4.4% en s'inscrivant à 314.6.

L'indice des actions privilégiées a diminué de 4.0% à 62.0.

Indice des prix des produits agricoles canadiens (1935-39=100)

L'indice des prix des produits agricoles canadiens sur les marchés terminaux a atteint 528.5 en juillet, soit 1.5% de plus que l'indice rectifié de juin (520.9). L'indice des produits d'origine animale a monté de 4.1% passant à 583.6 (l'indice rectifié du mois précédent étant de 560.6), suite à des hausses du prix des porcs et des bouvillons sur les deux marchés, du lait de fromagerie dans l'Est et des agneaux dans l'Ouest. Le prix des agneaux et de la volaille a diminué dans l'Est et celui des veaux, de la laine brute et des oeufs a baissé dans l'Ouest.

L'indice des produits de grandes cultures est tombé de 481.2 à 473.3 (-1.6%) traduisant une baisse du prix du foin et des pommes de terre sur les deux marchés, et de l'orge et du blé dans l'Est. Il y a eu des augmentations de prix du seigle sur les deux marchés, du maïs dans l'Est et du lin dans l'Ouest.

Indice des prix de trente matières industrielles (1935-39=100)

L'indice des prix de trente matières industrielles, qui est une moyenne géométrique non pondérée, a progressé de 1.2% pour atteindre 497.9 en juillet par rapport à l'indice rectifié de 491.8 en juin. Les prix ont augmenté dans le cas de douze marchandises, ont diminué dans six cas et sont demeurés stationnaires dans douze autres. Parmi les principaux changements, il faut mentionner des augmentations dans le cas des porcs, des déchets d'acier, des profilés de construction, des bouvillons, du blé, du minerai de fer, de l'huile de lin, de la pâte au sulfite blanchie, du sucre brut, du pétrole brut, de l'avoine, et de la pâte au sulfite non blanchie, tandis qu'il y a eu des diminutions dans le caoutchouc, l'étain, la laine brute, le coton brut, le bois d'épinette et le sisal.

Consumer Price Movements

The Consumer Price Index for Canada (1961 = 100) rose 0.8% to 168.0 in July from 166.7 in June. Though all major components moved up, a 0.9% rise in the Food index accounted for over one-third of the All-Items rise, and a 0.6% increase for Housing contributed a further quarter. Recreation, Education and Reading advanced 2.2% and Transportation rose 0.8%. Among the remaining major components, Health and Personal Care increased 0.4%, while the indexes for Clothing and for Tobacco and Alcohol each rose 0.3%. In the latest month, the price level for All-Items other than Food moved up 0.7%. Between July 1973 and July 1974, the All-Items Index advanced 11.3%.

The Food index rose 0.9% to 190.2 in July from 188.4 in June as home-consumed food prices increased 0.9%, while the index for food eaten away from home moved up 1.3%. Over half of the increase in the food at home index was attributable to a 2.7% rise in beef prices. While most beef cuts recorded increases, hamburger fell in price for a fifth consecutive month to a level almost 16% below its peak in February. Pork prices, after declining for nine months in a row, moved up 3.1% in the latest month. The poultry and the fish indexes, by contrast, decreased by 1.7% and 1.4%, respectively. Fresh produce exhibited mixed price movements as lower quotations for potatoes, lettuce and bananas outweighed increases for apples, celery, carrots and onions. On average, the price of fresh vegetables decreased 1.4% and fresh fruit 1.2%. The indexes for dairy products, up 0.3%, and cereal products, up 0.5%, were relatively stable in the latest month, but fats and oils advanced 1.2% chiefly in response to higher prices for margarine. Among other foods, sugar rose 2.0% to a level 132% above a year earlier. Other sugar-based products such as jelly powders, jams, and soft drinks also rose in the latest month as did most frozen and convenience foods. Between July 1973 and July 1974, the Food index moved up 16.3% with the price of food consumed at home rising 15.2% and that for food away from home 21.6%.

The Housing index rose 0.6% to 166.5 in July from 165.5 in June as a result of increases in both the shelter and household operation components. Within shelter, the homeownership index rose 0.5% because of an increase in the mortgage interest index. Rents edged up 0.3%. The household operation component rose 0.9% as higher prices were recorded for furniture, floor coverings, linens and draperies. Most household supplies also increased in the latest month as did the price of domestic help. In the twelve months to July 1974, the Housing index rose 9.0%.

The Clothing index edged up 0.3% to 152.5 in July from 152.0 in June. Price increases were recorded for the

Mouvements des prix à la consommation

L'indice des prix à la consommation pour le Canada (1961 = 100) a progressé de 0.8%, passant de 166.7 en juin à 168.0 en juillet. Même si tous les principaux éléments ont augmenté, la hausse de 0.9% de l'indice des aliments a rendu compte de plus d'un tiers de la hausse de l'indice d'ensemble et une augmentation de 0.6% dans l'habitation en a représenté le quart. L'indice des loisirs, de la formation et de la lecture a augmenté de 2.2% et celui des transports, de 0.8%. Parmi les autres éléments principaux, l'indice des soins personnels et hygiène a avancé de 0.4%, alors que l'indice de l'habillement et celui des tabacs et alcools ont tous deux progressé de 0.3%. Au cours du dernier mois, le niveau des prix pour les éléments de l'indice d'ensemble autres que l'alimentation a avancé de 0.7%. De juillet 1973 à juillet 1974, l'indice d'ensemble a avancé de 11.3%.

L'indice des aliments a progressé de 0.9%, passant de 188.4 en juin à 190.2 en juillet à la suite d'une hausse de 0.9% des prix des aliments consommés à la maison alors que l'indice des repas pris à l'extérieur a monté de 1.3%. Plus de la moitié de la hausse du prix des aliments consommés à la maison est attribuée à la hausse de 2.7% du prix du boeuf. Alors que l'on observe une augmentation du prix de la plupart des coupes de boeuf, le prix du boeuf haché a baissé pour le cinquième mois consécutif pour son niveau à 16% de moins qu'en février. Le prix du porc, après avoir baissé pendant neuf mois de suite, a augmenté de 3.1% au cours du mois dernier. D'autre part, les indices du poisson et de la volaille ont régressé de 1.7% et de 1.4% respectivement. Les fruits et légumes frais ont présenté des mouvements de prix variés: la baisse du prix des pommes de terre, de la laitue et des bananes a compensé la hausse du prix des pommes, du céleri, des carottes et des oignons. En moyenne, le prix des légumes frais a diminué de 1.4% et celui des fruits frais, de 1.2%. L'indice des produits laitiers (+ 0.3%) et celui des produits de céréales, (+ 0.5%) ont été relativement stables au cours du mois dernier mais le prix des matières grasses et des huiles a monté de 1.2% surtout à cause de la hausse du prix de la margarine. Entre autres aliments, le sucre a augmenté de 2.0% pour atteindre un niveau supérieur de 132% à celui d'il y a un an. Le prix d'autres produits à base de sucre, que les poudres à gelée, les confitures et les boissons gazeuses, ont aussi monté au cours du mois dernier, tout comme la plupart des aliments congelés et des plats cuisinés. De juillet 1973 à juillet 1974, l'indice des aliments a progressé de 16.3%; le prix des aliments consommés à la maison a monté de 15.2% et celui des repas pris à l'extérieur, de 21.6%.

L'indice de l'habitation a avancé de 0.6% passant de 165.5 en juin à 166.5 en juillet en raison des augmentations enregistrées pour les éléments logement et dépenses de ménage. Dans le logement, l'indice de la propriété a augmenté de 0.5% à cause d'une avance de l'indice de l'intérêt hypothécaire. Les loyers ont monté de 0.3%. L'élément dépenses de ménage a progressé de 0.9% à la suite de la hausse du prix des meubles, des revêtements de sol, des draps et des rideaux. Le prix de la plupart des fournitures de maison a aussi augmenté au cours du mois de juillet de même que le coût de l'aide domestique. Au cours des douze derniers mois se terminant en juillet 1974, l'indice de l'habitation a avancé de 9.0%.

L'indice de l'habillement a progressé de 0.3%, passant de 152.0 en juin à 152.5 en juillet. La plupart des éléments de

majority of apparel groups, but mid-summer sales on some outer wear and sports wear items moderated the overall clothing increase. Footwear prices, on average, rose 0.5%. The Clothing index moved up 10.3% in the latest twelve months.

The Transportation index rose 0.8% to 152.4 in July from 151.2 in June. Over three-quarters of the increase was attributable to higher automobile insurance rates, mainly in Eastern Canada. New car prices rose 0.5% in the latest month bringing the increase in this index since last July to 6.5%. Gasoline prices, by contrast, decline 0.6% in the latest month but were still 22% higher than a year earlier. Among public transportation items, the train fares index recorded a seasonal increase, while taxi fares rose in Vancouver and St. John's. The Transportation index increased 11.5% in the latest twelve months.

The Health and Personal Care index moved up 0.4% to 169.9 in July from 169.3 in June. In the health care component, prescribed drugs rose 0.4%, while among personal care supplies, notable increases were recorded for toilet soap, hair preparations and cleansing tissues. The Health and Personal Care component stood 8.7% higher than a year earlier.

The Recreation, Education and Reading index rose 9.2% to 160.4 in July from 156.9 in June. Virtually all of the advance was attributable to generally higher prices for hotel and motel rooms and to increased newspaper subscription rates in a number of major cities. The Recreation, Education and Reading index stood 9.2% higher than a year earlier.

The Tobacco and Alcohol index rose 0.3% to 143.9 in July from 143.5 in June. Over four-fifths of the increase was attributable to higher prices for domestic wines in several provinces. The Tobacco and Alcohol index stood 5.5% higher than a year earlier.

Consumer price movements, reclassified by goods and services, offer another view of the incidence of price change. Between June and July, the total goods index rose 0.6% with the main impetus coming from non-durables which rose 0.9% mainly in response to higher prices for food and household supplies, and increased newspaper subscription rates. The index for durable goods rose 0.4% chiefly because of higher quotations for automobiles, furniture, floor coverings, boats and motors. Semi-durable goods edged up 0.3% in response to higher prices for clothing and some home furnishings. A rise of 1.0% was recorded in the services index following increases in shelter, hotel and motel rates, automobile insurance and domestic help. In the latest twelve months, the total goods index advanced 13.0% and that for services 11.1%.

groupe ont enregistré des augmentations de prix mais les ventes de la mi-été de vêtements de dessus et de vêtements sport ont modéré la hausse globale du prix de l'habillement. Les prix des chaussures ont augmenté de 0.5% en moyenne. L'indice de l'habillement a avancé de 10.3% au cours des douze derniers mois.

L'indice des transports a progressé de 0.8%, passant de 151.2 en juin à 152.4 en juillet. Plus des trois quarts de cette progression sont imputables à une hausse des taux d'assurance-automobile, principalement dans l'est du Canada. Le prix des voitures neuves a augmenté de 0.5% le mois dernier, ce qui porte à 6.5% l'augmentation de cet élément depuis juillet 1973. Par contre, le prix de l'essence a diminué de 0.6% au cours du mois observé, mais il était encore supérieur de 22% à celui de l'an passé. Parmi les éléments des transports publics, le tarif des trains a enregistré une hausse saisonnière, tandis que le tarif des taxis a augmenté à Vancouver et à St-Jean (T.-N.). L'indice des transports a progressé de 11.5% au cours des douze derniers mois.

L'indice des soins personnels et de l'hygiène a progressé de 0.4%, passant de 169.3 en juin à 169.9 en juillet. Dans l'élément hygiène, les médicaments prescrits ont augmenté de 0.4%, tandis que dans les produits pour les soins personnels, on a observé des hausses d'importance pour le savon de toilette, les produits capillaires et les papiers-mouchoirs. L'élément soins personnels et hygiène a progressé de 8.7% par rapport à l'an passé.

L'indice des loisirs, de la formation et de la lecture a progressé de 9.2%, passant de 156.9 en juin à 160.4 en juillet. La progression est presque entièrement attribuable à une hausse générale du prix des chambres d'hôtel et de motel et à une augmentation du prix d'abonnement aux journaux dans un certain nombre de grandes villes. L'indice des loisirs, de la formation et de la lecture a progressé de 9.2% par rapport à juillet 1973.

L'indice des tabacs et alcools a progressé de 0.3%, passant de 143.5 en juin à 143.9 en juillet. Plus des quatre cinquièmes de la progression sont attribuables à une hausse des vins canadiens dans plusieurs provinces. L'indice des tabacs et alcools a progressé de 5.5% par rapport à l'an dernier.

Si l'on classe les articles qui entrent dans l'indice des prix à la consommation par biens et services, on obtient une image différente du mouvement des prix à la consommation. Entre juin et juillet, l'indice d'ensemble des biens a progressé de 0.6%, la plus forte augmentation ayant été enregistrée par les biens non durables (0.9%) par suite principalement d'une hausse du prix des aliments et des fournitures de ménage ainsi que de l'abonnement aux journaux. L'indice des biens durables a progressé de 0.4% en raison principalement d'une hausse du prix des automobiles, des meubles, des revêtements de sol, des embarcations et moteurs. L'indice des biens semi-durables a progressé de 0.3% par suite d'une hausse du prix des vêtements et de certains articles de maison. L'indice des services a progressé de 1.0% par suite d'une hausse du prix du logement, des chambres d'hôtel et de motel, de l'assurance-automobile et de l'aide domestique. Au cours des douze derniers mois, l'indice d'ensemble des biens a progressé de 13.0% et celui des services, de 8.1%.

TABLE 2. INDUSTRY SELLING PRICE INDEXES BY INDUSTRY AND SELECTED COMMODITIES
 TABLEAU 2. INDICE DES PRIX DE VENTE DANS L'INDUSTRIE PAR INDUSTRIE ET PAR CERTAINS PRODUITS

1961 = 100

Industries and selected commodities(1) Industrie et certains produits(1)	Month — Mois												Annual Annuel
	J	F	M	A	M	J	J	A	S	O	N	D	Annuel
	1971												
	1972												
	1973												
	1974												
Industry selling price index: manufacturing(7) — indice de prix de vente dans l'industrie: industries manufactu- rières(7)	1970	119.1	119.4	119.6	119.7	119.6	119.1	118.8	118.5	118.5	118.9	118.8	119.1
	1971	119.4	119.8	120.3	121.2	121.2	121.7	122.3	122.4	122.5	122.6	122.7	121.6
	1972	124.5	125.3	125.9	126.5	126.7	126.9	127.4	127.8	128.5	129.0	129.7	127.4
	1973	133.1	134.6	136.6	138.2	139.5	141.0	143.0	147.8	147.7	148.8	150.2	142.7
	1974	156.8	159.3	162.2	165.5	167.9	169.9	172.7					

- (1) Indexes for 1972, 1973 and 1974 are subject to revision. — Les indices pour 1972, 1973 et 1974 sont sujets à révision.
- (2) This industry was changed in commodity content, price sample and weights in accordance with significant changes within the industry. Figures are revised from January 1971 to date. — La composition en marchandises, les échantillons de prix et les mesures de poids ont changé dans cette industrie conformément à des changements importants survenus dans l'industrie même. Les chiffres sont révisés de janvier 1971 à aujourd'hui.
- (3) Effective January 1973 changes have been made in the calculation of this index. For details see page 88. — À compter de janvier 1973, on a modifié le calcul de cet indice. Pour plus de détails, voir la page 88.
- (4) An extensive revision of the weight and price sample (including the incorporation of goods purchased and resold in same condition as purchased) necessitated by developments in the industry's production pattern since 1961 have resulted in the introduction of new price indexes and a discontinuity in the industry price index. — Une révision approfondie de l'échantillon des pondérations et des prix (y compris l'intégration des biens achetés et revendus sans aucune modification), nécessitée par l'évolution du régime de production de l'industrie depuis 1961, a amené l'adoption de nouveaux indices des prix ainsi qu'une solution de continuité dans l'indice des prix industriels.

	Old Series — Ancienne série	New series — Nouvelle série
December — 1970 — Décembre	95.1	92.3
January — 1971 — Janvier	95.1	92.1
Average — 1971 — Moyenne	95.2	91.8

- (5) This series has been revised from January 1969 forward. An expanded list of establishments and commodities has been selected and prices for these have been aggregated to a total industry index using 1971 shipments data. The price quotations are, in general, of an improved quality. Selected commodity data on a 1971 time and weight base, are available on request. — Les chiffres de cette série ont été révisés à partir de janvier 1969. Une liste augmentée des établissements et des produits a été établie, et les prix de ces produits ont été agrégés p total de l'activité économique à partir des données sur les livraisons de 1971. De manière générale, le calcul prix est plus fiable. Les utilisateurs peuvent obtenir sur demande des données sur certains produits utilisant les facteurs de pondération de 1971 et dont la période de référence est 1971.
- (6) Motor gasoline prices are 'List' and may not be a reflection of actual transaction prices. — Les prix de l'essence sont des prix de détail suggérés et peuvent ne pas traduire les prix réels à la transaction.
- (7) Gross weighted, including inter-industry shipments. For explanation see page 88. — Indice pondéré brut comprenant les livraisons inter-industrielles. Pour toute explication voir page 88.

ALL-ITEMS Consumer Price Index Converted to 1949=100 - July 1974 - L'indice des prix à la consommation de tous les éléments converti à 1949=100 - Juillet 1974 217.1

(1) Indexes prior to May 1973 incorporate 1957 expenditure weights, those for May 1973 forward are based on 1967 expenditures. The revised series is linked to its predecessor at April 1973. For further explanation, see page 92. - Avant mai 1973 les indices étaient calculés à l'aide des pondérations fondées sur les dépenses de 1957; à partir de mai 1973 ils sont calculés à l'aide des pondérations fondées sur les dépenses de 1967. Les séries révisées sont raccordées aux précédentes en avril 1973. Pour plus de renseignements, voir page 92.

TABLE 9. Consumer Price Indexes for Canada - Main Groups and Selected Components and Items(1)

TABLEAU 9. Indices des prix à la consommation, Canada - Groupes principaux, éléments et articles choisis(1)
(1961=100)

	July 1974 Juill.	June 1974 Juin	July 1973 Juill.	June 1973 Juin	1973	1972	1971
All-items - Indice d'ensemble	168.0	166.7	151.0	149.7	150.4	139.8	133.4
Food - Aliments	190.2	188.4	163.5	160.5	152.0	141.4	131.4
Food for home consumption - Aliments consommés à la maison	184.6	183.0	160.2	156.8	157.9	137.5	127.4

Shortening - Graisse végétale	186.3	185.5	127.1	124.9	129.2	121.8	118.7
Salad/cooking oil(2) - Huile à frire ou de table(2)	153.6	152.2	100.7	99.9
Salad dressing - Vinaigrette	148.5	147.2	110.8	110.8	114.2	109.9	105.4
Meat, poultry and fish - Viande, volaille et poisson	195.1	191.7	180.3	175.8	182.6	147.7	130.9
Meat - Viande	189.9	185.3	179.4	175.0	181.3	147.5	131.2
Beef - Boeuf	211.1	205.5	194.1	188.4	190.4	157.6	144.3
Sirloin steak - Bifteck de surlonge ..	213.9	199.0	183.9	174.7	176.1	152.4	143.4
Round steak - Bifteck dans la ronde ..	222.2	214.7	200.4	193.1	195.2	160.4	148.0
Prime rib roast - Rôti de côtes de choix	207.3	194.4	183.6	179.6	181.6	154.3	139.9
Blade roast - Rôti de palette	196.2	175.1	181.7	181.9	182.0	148.9	133.1
Stewing beef - Boeuf pour ragoût	209.7	206.4	185.7	182.1	186.3	157.3	145.9
Hamburg - Boeuf haché	214.8	227.6	220.0	215.8	217.8	170.4	148.5
Liver - Foie	192.7	195.5	168.5	167.9	168.6	134.8	119.1
Pork - Porc	157.3	152.7	158.6	155.1	168.4	132.4	109.6
Bacon(3) - Bacon(3)	137.1	131.6	141.1	133.0	153.2	115.8	88.8
Smoked ham(4) - Jambon fumé(4)	143.7	142.6	147.4	147.3	158.8	125.7	110.7
Cottage Roll - Roulé de haut d'épaule	162.4	165.2	169.4	168.7	176.9	135.0	110.9
Loin cuts - Coupes de longe	182.6	172.7	180.4	175.8	187.5	153.0	122.7
Shoulder cuts - Coupes d'épaule	142.4	136.6	160.3	160.2	173.8	128.0	120.4
Sausages - Saucisses	175.8	177.5	159.6	159.0	166.4	130.9	119.6
Other meat - Autres viandes	187.5	186.0	174.0	172.2	178.8	146.6	133.1
Wiensers - Saucisses de Francfort	163.9	162.0	156.0	155.3	160.1	127.8	119.0
Veal - Veau	247.5	246.6	225.6	219.7	225.5	189.9	165.0
Canned meat - Viandes en conserve	181.7	183.0	145.0	142.7	151.5	123.3	123.0
Poultry - Volaille	183.4	186.6	163.9	158.5	164.3	124.6	108.9
Chicken - Poulet	190.3	192.9	169.0	163.5	169.1	128.9	112.0
Turkey - Dinde	152.8	157.4	139.1	134.5	140.4	105.4	95.8
Fish - Poisson	278.1	278.9	209.2	207.6	222.3	180.5	157.0
Canned salmon - Saumon en boîte	241.8	241.7	159.5	158.1	181.3	149.0	143.0
Canned tuna(2) - Thon en boîte(2)	120.1	119.3	105.2	103.4
Eggs - Oeufs	148.6	149.0	132.0	126.7	136.5	94.7	87.3
Fruit and vegetables - Fruits et légumes ..	213.7	215.3	195.0	184.1	166.7	139.8	130.5
Fresh fruit - Fruits frais	221.8	224.6	203.4	197.2	175.6	143.2	132.7
Oranges - Oranges	124.3	122.2	114.7	115.4	119.8	104.4	111.9
Bananas - Bananes	104.5	117.2	93.7	91.4	82.8	79.3	76.2
Apples - Pommes	242.8	225.9	196.1	167.5	160.0	123.8	118.8
Grapefruit - Pamplemousses	179.9	172.9	172.6	161.8	158.7	153.4	154.8
Processed fruit - Fruits traités	170.2	168.4	141.8	139.7	142.4	127.6	122.7
Canned peaches - Pêches en conserve	182.9	178.2	158.8	155.4	155.9	140.8	135.5
Canned pears - Poires en conserve	147.8	145.6	132.6	131.9	132.7	124.5	120.7
Canned apple sauce(2) - Compote de pommes en conserve(2)	145.4	141.6	103.7	102.3
Canned apple juice(3) - Jus de pommes en conserve(3)	186.6	187.1	134.8	132.8	138.3	122.0	110.4
Canned orange juice - Jus d'oranges en conserve	117.8	117.7	112.3	112.4	112.6	115.0	108.9
Raisins - Raisins secs	264.1	263.6	201.9	194.0	207.2	153.4	150.2
Fresh vegetables - Légumes frais	246.4	250.0	237.7	212.6	180.6	147.0	135.0
Potatoes - Pommes de terre	338.2	363.7	317.8	251.8	212.3	128.2	114.7
Tomatoes - Tomates	253.0	245.3	205.3	161.2	173.7	167.5	162.2
Lettuce - Laitue	218.4	241.1	258.6	293.4	189.3	162.9	160.8
Carrots - Carottes	191.1	175.1	155.5	133.2	126.6	124.9	123.4
Celery - Céleri	210.1	178.4	189.0	169.4	167.4	164.2	141.6
Onions - Oignons	210.2	189.7	256.4	323.2	221.6	157.9	128.5
Cabbage - Choux	224.3	235.4	265.5	220.4	199.1	171.9	150.4
Turnips - Navets	166.8	164.6	257.7	225.0	182.0	154.2	125.1

(1) Indexes prior to May 1973 incorporate 1957 expenditures weights, those for May 1973 forward are based on 1967 expenditures. The revised series is linked to its predecessor at April 1973. For further explanation see page 92. - Avant mai 1973 les indices étaient calculés à l'aide des pondérations fondées sur les dépenses de 1957; à partir de mai 1973 ils sont calculés à l'aide des pondérations fondées sur les dépenses de 1967. Les séries révisées sont raccordées aux précédentes en avril 1973. Pour plus de renseignements, voir page 92.

(2) Excludes accessories and notions. - Ne comprend pas les accessoires et menus articles.

(3) Includes clothing accessories and notions. - Comprend les accessoires et menus articles vestimentaires.

(4) Includes constant weighted food component. - Comprend l'élément aliments calculé à l'aide de pondérations constantes.

TABLE 11. Consumer Price Indexes, Regional Cities(1)

TABLÉAU 11. Indices des prix à la consommation, agglomérations urbaines(1)

Note: (i) These indexes measure within each city the percentage change in consumer prices from the base period to the subsequent time periods. They cannot be used to compare levels of prices between cities. (ii) For inter-city indexes of retail price differentials refer to Table 14. - Nota: (1) Les indices mesurent dans chaque ville le pourcentage de variation des prix à la consommation depuis la période de base jusqu'à des périodes subséquentes. Ils ne peuvent servir à comparer les niveaux des prix d'une ville à l'autre. (ii) Pour les indices comparatifs des prix de détail, se reporter au Tableau 14.

(1) Indexes prior to May 1973 incorporate 1957 expenditure weights, those for May 1973 forward are based on 1967 expenditure. The revised series is linked to its predecessor at April 1973. For further explanation, see page 92. - Avant mai 1973 les indices étaient calculés à l'aide des pondérations fondées sur les dépenses de 1957; à partir de mai 1973 ils sont calculés à l'aide des pondérations fondées sur les dépenses de 1967. Les séries révisées sont raccordées aux précédentes en avril 1973. Pour plus de renseignements, voir page 92.

(2) Until April 1973, the shelter element of regional cities' housing indexes moved on the basis of changes in rents only. However, from May 1973 on, homeownership has been included in the shelter element of regional cities' housing indexes, so that the Canada and regional city shelter indexes now contain the same elements. See also page 93. - Jusqu'en avril 1973, l'élément logement des indices de l'habitation des agglomérations urbaines était basé uniquement sur les variations des loyers. Toutefois, depuis mai 1973, les frais de possession d'une maison ont été incorporés à l'élément logement des indices de l'habitation des agglomérations urbaines; il en résulte que les indices du logement pour le Canada et pour les agglomérations urbaines comportent maintenant les mêmes éléments. Voir aussi la page 93.

(1) Indexes prior to May 1973 incorporate 1964 expenditure weights, those for May 1973 forward are based on 1967 expenditures. The revised series is linked to its predecessor at April 1973. For further explanation, see page 92. - Avant mai 1973 les indices étaient calculés à l'aide des pondérations fondées sur les dépenses de 1964; à partir de mai 1973 ils sont calculés à l'aide des pondérations fondées sur les dépenses de 1967. Les séries révisées sont raccordées aux précédentes en avril 1973. Pour plus de renseignements, voir page 92.

(2) Includes shelter and household operation. Until April 1973, the shelter element of regional cities housing indexes moved on the basis of changes in rents only. However, from May 1973 on, homeownership has been included in the shelter element of regional cities' housing indexes, so that the Canada and regional city shelter indexes now contain the same elements. See also page 93. - Comprend le logement et l'entretien du ménage. Jusqu'en avril 1973, l'élément logement des indices de l'habitation des agglomérations urbaines était basé uniquement sur les variations des loyers. Toutefois, depuis mai 1973, les frais de possession d'une maison ont été incorporés à l'élément logement des indices de l'habitation des agglomérations urbaines; il en résulte que les indices du logement pour le Canada et pour les agglomérations urbaines comportent maintenant les mêmes éléments. Voir aussi la page 93.

(1) Indexes for 1974 are subject to revision. - Les indices pour 1974 sont sujets à revision.

(2) The Canada Index is the weighted average of the General Contractors and the Sub-trade Contractors Indexes as well as being the weighted average of the regional indexes. - L'indice pour le Canada est la moyenne pondérée des indices des entrepreneurs généraux et sous-traitants. Il correspond également à la moyenne pondérée des indices régionaux.

(1) Indexes for 1974 are subject to revision. - Les indices pour 1974 sont sujets à révision.

(2) From Table 18. For explanation of recent revisions see Vol 1, No. 7 of Construction Price Statistics, Service Bulletin 62-006. - Du Tableau 18. Pour une explication des récentes révisions voir Vol 1, No. 7 du bulletin de service "Statistique des prix dans la construction" 62-006.

(3) National Income and Expenditure Accounts, Catalogue 13-001, quarterly. - (No. 13-001 au catalogue, trimestriel).

(4) Indexes for 1973 and 1974 are subject to revision. - Les indices pour 1973 et 1974 sont sujets à révision.

(5) From Table 19. For explanation of recent revisions see Vol 1, No. 10 of Construction Price Statistics, Service Bulletin 62-006. - Du Tableau 19. Pour une explication des récentes révisions voir Vol 1, No. 10 du bulletin de service "Statistique des prix dans la construction" 62-006.

(6) This series contains an engineering component as well as a building component, and is therefore not precisely comparable in coverage with the non-residential composite index. The implicit price indexes are adjusted for changes in contractor profit and productivity. - Cette série comprend une composante génie aussi bien qu'une composante construction: elle n'a donc pas tout à fait la même portée que l'indice synthétique pour la construction non-résidentielle. Les indices synthétiques sont corrigés des variations des profits et de la productivité des entrepreneurs.

- (1) To assist comparison with other published series the indexes presented have been arithmetically converted from 1956=100 to 1961=100. The 1956=100 indexes are available on request. - Pour faciliter la comparaison avec d'autres séries publiées, ces indices ont été recalculés sur la base 1961=100. Les indices originaux (1956=100) sont disponibles.
- (2) The years refer to fiscal years. Thus 1961 refers to the period April 1, 1961 to March 31, 1962. - Années financières; par exemple, 1961 couvre la période du 1er avril 1961 au 31 mars 1962.
- (3) Major components for the provincial indexes are presented annually in Construction Price Statistics, Service Bulletin No. 62-006. - Les principaux éléments des indices pour les provinces sont publiés annuellement dans le bulletin de service, Statistiques des Prix dans la Construction, no 62-006.
- (4) Direct comparisons should not be made between this index and the highway index published by the Ontario Department of Transportation & Communications. The item content of the indexes is different. - On ne peut comparer directement cet indice avec celui de la voirie publié par le Département du transport et des communications de l'Ontario. Les éléments des deux indices sont différents.

Explanation of Methods Used and Additional Sources for Price Series

Industrial Price Indexes

Industry Selling Price Indexes (1961 = 100)

Industry selling price indexes are published for approximately 100 industries within manufacturing. Also published are approximately 425 commodity price indexes for the products of these industries. The Classification system is that of the 1960 standard industrial classification, thus permitting the joint use of price statistics with other data such as production and employment similarly classified.

The data upon which both the initial selection of commodities to be priced and responding firms are made are contained in the Census of Manufacturers, a series of annual surveys collecting statistics on shipments of commodities, employment and materials used. Prices are collected on the 15th of each month or the nearest transaction date for the commodity being priced; sales and excise taxes are excluded.

The industry classified price indexes are useful for analysis of price movements, for estimation of the constant dollar value of shipments, and for purposes of contract escalations.

A complete description of these indexes is contained in: Industry Selling Price Indexes 1956-68, Catalogue No. 62-528.

Industry Selling Price Index: Manufacturing

The index is gross weighted. It measures the movements of prices of gross shipments of manufacturing industries, including inter-industry shipments between individual industries within manufacturing. Therefore, it duplicates the movements of some prices in the sense that, for example, flour prices are given full weight as part of the shipments of the Flour Mills Industry and then are implicitly counted again through full weighting of the shipment prices of those manufacturing industries which use flour as an ingredient in their outputs, e.g., bread, biscuits, cakes, etc.

"Iron & Steel Mills:" 12-2910

The principal change in the index is as follows: From January 1973 forward prices collected from the various companies are, for any given commodity, weighted together in a way that reflects the relative importance of each company's shipments of the commodity to the total shipments of that commodity by all companies in the year 1971. In addition prices for stainless products were deleted from the series bars hot rolled etc. (12-2910-082), in September 1972 and from the series sheets and strip cold rolled etc. (12-2910-084) in October 1972. Prices for stainless products, however, are included in the price index for the iron and steel mills industry.

The concept of price change measured is net return to mill.

Explication des méthodes utilisées et sources supplémentaires des séries de prix

Indices des prix industriels

Indices des prix de vente dans l'industrie (1961 = 100)

Les indices des prix de vente dans l'industrie sont publiés pour environ 100 industries manufacturières. Près de 425 indices des prix des produits de ces industries sont également publiés. Les produits sont classés d'après la Classification type des industries de 1960, ce qui permet d'utiliser la statistique des prix avec d'autres données telles que la production et l'emploi classées de la même manière.

Les données sur lesquelles se fonde le choix initial des produits dont il faut déterminer le prix et des établissements enquêtés figurent dans le "recensement des manufactures", série de bulletins sur les enquêtes annuelles au cours desquelles on recueille des statistiques sur les expéditions de produits, sur l'emploi et sur les matières utilisées. La collecte des prix a lieu le 15 de chaque mois ou à la date de transaction la plus rapprochée pour le produit en question; les taxes de vente et droits d'accise ne sont pas pris en compte.

Les indices des prix classés par industrie servent à analyser les mouvements de prix, à estimer la valeur des expéditions en dollars constants et à indexer les contrats.

La description complète de ces indices est donnée dans "Indices des prix de vente dans l'industrie, 1956-68", numéro 62-528 au catalogue.

Indices des prix de vente dans l'industrie: Industries manufacturières

Il s'agit d'un indice pondéré brut. Il mesure les mouvements du prix des livraisons brutes des industries manufacturières y compris les livraisons inter-industrielles des industries manufacturières. Il prend donc deux fois en compte les mouvements de certains prix: les prix de la farine, par exemple, font l'objet d'une pondération complète comme ayant trait aux livraisons de meuneries et ils sont comptés à nouveau implicitement du fait de la pondération complète des prix de livraisons des industries manufacturières qui utilisent de la farine comme ingrédient de leurs produits, tels que le pain, les biscuits ou les gâteaux.

"Sidérurgie:" 12-2910

Le principal changement apporté à l'indice est le suivant depuis janvier 1973, les prix recueillis auprès des différentes sociétés sont, pour tout produit, pondérés de manière à refléter l'importance relative des livraisons de chaque société par rapport aux livraisons totales de ce produit par toutes les sociétés en 1971. En outre, les prix des produits en acier inoxydable ont été enlevés de la série "barres, laminés à chaud, etc." (12-2910-082) en septembre 1972 et de la série "tôles et feuillards, laminés à froid, etc." (12-2910-084) en octobre 1972. Ils sont toutefois compris dans l'indice des prix de l'industrie de la sidérurgie.

Le concept de la mesure de la variation des prix se fonde sur le revenu net à l'usine.

Purchase Price Indexes of Secondary Metals (1969 = 100)

Ferrous and non-ferrous indexes are compiled from a series of input prices, inclusive of transportation and brokerage fees, submitted by a wide variety of purchasers from selected industries. Indexes for certain categories of metals cannot be published because of the confidentiality of the data under the Statistics Act.

Canadian Farm Products Price Index (1935-39 = 100)

Prices of Western grains used in the index are Canadian Wheat Board buying prices for the grades listed below. Initial payments are first used in the index calculation and are revised as further payments are announced.

Final payments for the crop year August 1972 - July 1973 were announced on November 6, 1973 for wheat, oats and barley. The estimates of Final payments for the 1973-74 crop year are based on wheat Board predictions of April 1974.

Indices du prix d'achat des métaux de deuxième fusion (1969 = 100)

L'indice des métaux ferreux et non ferreux est établi à partir d'une série de prix comprenant les frais de transport et de dédouanement; ces données sont fournies par un large éventail de clients de certaines industries. Confidentiels en vertu de la Loi sur la statistique, les indices de certaines catégories de métaux ne peuvent être publiés.

Indice des prix des produits agricoles canadiens (1935-39 = 100)

Les prix des céréales de l'Ouest figurant dans l'indice représentent les prix à l'acheteur de la Commission canadienne du blé pour les catégories énumérées ci dessous. Les paiements initiaux servent d'abord au calcul de l'indice et sont ensuite révisés lorsque d'autres paiements sont annoncés.

Les prix définitifs pour la campagne allant d'août 1972 à juillet 1973 ont été annoncés le 6 novembre 1973, en ce qui concerne le blé, l'avoine et l'orge. Les estimations des paiements totaux pour la campagne agricole 1973-74 sont fondées sur les prévisions d'avril 1974 de la Commission canadienne du blé.

Used in original indexes from Aug. 1972 to July 1973. — Utilisé dans les premiers indices d'août 1972 jusqu'en juillet 1973.
Incorporated retroactively in revised final indexes Aug. 1972 to July 1973. — Inclus rétroactivement dans les indices finals révisés d'août 1972 à juillet 1973.
Used in current indexes. — Utilisé dans les indices courants.

General Wholesale Index (1935-39 = 100)

The General Wholesale Index is a commodity classified index of prices. The index is "general" inasmuch as it incorporates a diverse selection of both primary and processed commodities. It is called "wholesale" because its ingredient prices relate to that broad and heterogeneous area of commodity distribution which excludes only retail trade. In fact, the term "wholesale" has more of a connotation of bulk trading than of any homogeneous level of distribution. Thus, though the index mainly includes prices of producers, it also covers transactions of "middle men" who trade in commodities of a type or in quantities characteristic of primary marketing functions.

Though general wholesale price indexes have been calculated by many countries for years there is no precise answer to the question of what such an index measures. This is so because the index cannot be associated with any adequately definable value aggregate. Unlike a consumer price index which can be identified with expenditures of household consumers, a general wholesale index covers a host of overlapping transactions sometimes involving the same ingredient in as many as three different stages of processing. Yet, conceptually, it is not a measure of the purchasing power of money because it omits significant areas of monetary transactions such as prices of land, labour, securities and services, except in so far as prices of these things are implicit in commodity prices. As a conventional summary figure, its use has tended towards a reference level against which to observe the behaviour of particular price groups such as farm products, industrial materials, building materials and the various other groupings for which indexes are published. And as an indicator of general business conditions it is usually included in the group which is regarded as approximately coincident with the business cycle. However, its main attribute now lies in its long historical continuity.

For further details about the General Wholesale Index please consult: Wholesale Price Indexes 1913-50 (Reference Paper No. 24) Prices and Price Indexes 1949-52 (Vol. 23) (Catalogue No. 62-501).

Thirty Industrial Materials, (1935-39 = 100)

The price index of thirty industrial materials is calculated as an unweighted geometric average of prices of the selected commodities. The formula is as follows:

$$\sqrt[30]{\frac{P^1_{tN}}{P^1_{t\ 35-39}} \times \frac{P^2_{tN}}{P^2_{t\ 35-39}} \times \frac{P^3_{tN}}{P^3_{t\ 35-39}} \times \dots \times \frac{P^{30}_{tN}}{P^{30}_{t\ 35-39}}}$$

Indice général des prix de gros (1935-39 = 100)

L'indice général des prix de gros est un indice des prix classés par produit. Cet indice est "général" du fait qu'il comprend une variété de produits primaires et de produits transformés. Il est appelé "de gros" parce que les prix qui le composent se rapportent au domaine vaste et hétérogène de la distribution des produits dont seul le commerce de détail est exclu. En réalité l'expression "de gros" fait penser plus au commerce de gros qu'à un niveau homogène de distribution. Bien que l'indice comprenne surtout les prix établis par les producteurs, il englobe également les transactions des "intermédiaires" qui vendent des produits dont le genre et la qualité sont particuliers aux fonctions premières de la commercialisation.

De nombreux pays calculent l'indice général des prix de gros depuis des années; il n'en reste pas moins impossible de définir exactement ce que cet indice mesure, car on ne peut l'associer à une valeur globale que l'on puisse définir exactement. Contrairement à l'indice des prix à la consommation que l'on peut identifier grâce aux dépenses des ménages, l'indice général des prix de gros couvre une foule de transactions à double emploi impliquant parfois le même élément considéré jusqu'à trois étapes différentes de la transformation. Cependant, du point de vue conceptuel, cet indice ne constitue pas une mesure du pouvoir d'achat du dollar parce qu'il ne tient pas compte de transactions monétaires aussi importantes que le prix du terrain, du travail, des valeurs mobilières et des services, sauf si elles sont comprises dans le prix de produits. En tant que chiffre représentatif classique, on a une tendance à s'en servir pour comparer le comportement de certains groupes de prix, par exemple, celui des produits agricoles, des matières industrielles, des matériaux de construction et de divers autres groupes pour lesquels on publie des indices. Comme indicateur de la situation générale du commerce, l'indice est habituellement intégré au groupe dont on considère qu'il correspond le plus exactement au cycle commercial. Sa qualité principale réside cependant dans sa longue continuité chronologique.

Pour plus de détails sur l'indice général des prix de gros consulter *Wholesale Price Indexes 1913-50* (Reference Paper No. 24) et *Prices and Price Indexes 1949-52* (Vol. 23) (no 62-501 a catalogue).

Indice des prix de trente matières industrielles (1935-39 = 100)

L'Indice des prix de trente matières industrielles est calculé comme moyenne géométrique non pondérée des prix de certaines marchandises. La formule est la suivante:

$$\sqrt[30]{\frac{P^1_{tN}}{P^1_{t\ 35-39}} \times \frac{P^2_{tN}}{P^2_{t\ 35-39}} \times \frac{P^3_{tN}}{P^3_{t\ 35-39}} \times \dots \times \frac{P^{30}_{tN}}{P^{30}_{t\ 35-39}}}$$

The selection of materials for pricing relates to groups such as "stable" prices, numbering 12, food prices, numbering 5 and "sensitive" prices, numbering 13. We plan to construct an index of industrial prices that will relate to current usage of materials and that will be of the more traditional Laspeyre's type in its construction. The presently published index contains prices for some materials that no longer constitute important industrial inputs.

The Consumer Price Index for Canada (1961=100)

The Consumer Price Index measures the percentage change through time in the cost of purchasing a constant "basket" of goods and services representing the purchases by a particular population group in a specified time period. The "basket" is an unchanging or equivalent quantity and quality of goods and services, consisting of items for which there are continually measurable market prices over time.

The index relates to a broad but specific group of urban families and reflects the price changes experienced by that "target group". The index may not represent closely the experience of any one specific family within the group, nor could it be expected to reflect price change for other population groups for which income, family size and place of residence are characteristically different. The target group to which the current index relates is composed of families — (a) living in cities with over 30,000 population, (b) ranging in size from two to six persons and (c) with annual incomes in 1967 ranging from \$4,000 to \$12,000. To measure the influences of price change on the cost of goods and services purchased by such families, the Consumer Price Index reflects movements of some 300 items.

The history of consumer price indexes in Canada extends back to the early 1900's and encompasses periodic revisions of index base reference periods and weighting patterns. In January 1969, the time base was updated to 1961=100 from 1949=100; details are contained in the January 1969 issue of the monthly publication *Prices and Price Indexes*, Catalogue 62-002.

From March 1961 to April 1973 inclusive, the weights and relative importance of the items in the Consumer Price Index were based on 1957 family expenditure patterns; details of these weights can be found in *The Consumer Price Index for Canada (1949=100) (Revision Based on 1957 Expenditures)*, Catalogue 62-518. A subsequent weight revision to reflect 1967 family expenditure patterns (and within the food component, 1969 detailed spending habits) was introduced in May 1973. Full details of the latest weighting pattern and other background information on the Consumer Price Index is available in the occasional paper *The Consumer Price Index for Canada (1961=100) (Revision Based on 1967 Expenditures)*, Catalogue 62-539.

Le choix des matières servant au prélèvement des prix et se rapportant à des groupes tels que prix "stables", (12 matières), prix des aliments (5 matières) et prix "variables" (13 matières). Nous projetons d'établir un indice des prix industriels qui se rapportera à l'utilisation courante des matières et dont la structure se rapprochera plus du type Laspeyres plus traditionnel. L'indice publié ici renferme les prix de certaines matières qui ne sont plus considérées comme intrants importants dans l'industrie.

L'indice des prix à la consommation pour le Canada (1961=100)

L'indice des prix à la consommation mesure le taux de variation dans le temps du coût à l'achat d'un "panier" constant de biens et de services représentant les achats d'un groupe déterminé de la population au cours d'une période donnée. Le "panier" est constitué par des biens et des services en quantité et de qualité constantes; il comprend uniquement les biens et services qui ont un prix et dont les prix peuvent être observés de façon continue.

L'indice se rapporte à un groupe vaste, mais délimité, de familles urbaines et rend compte des changements de prix auxquels ce "groupe cible" doit faire face. L'indice peut ne pas suivre de près les changements de prix touchant une famille en particulier de ce groupe, pas plus que les changements de prix touchant d'autres groupes de la population dont le revenu, la taille des familles ou les lieux de résidence diffèrent sensiblement. Le groupe cible auquel se rapporte l'indice actuel se compose de familles a) vivant dans des villes de plus de 30,000 habitants, b) dont la taille est comprise entre deux et six personnes, et c) dont les revenus annuels en 1967 étaient compris entre \$4,000 et \$12,000. Afin de mesurer les effets de changements de prix sur le coût des biens et des services achetés par ces familles, l'indice des prix à la consommation suit les mouvements de quelque 300 articles.

L'histoire des indices de prix à la consommation au Canada remonte au début des années 1900, et elle comprend des révisions périodiques des périodes de référence de base de l'indice ainsi que des schémas de pondération. En janvier 1969, on a aligné la base de temps de 1949=100 à 1961=100; d'autres renseignements figurent dans l'édition de janvier 1969 de la publication mensuelle *Prix et indices des prix* (numéro 62-002 au catalogue).

De mars 1961 à avril 1973 inclusivement, les poids, ou l'importance relative des éléments de l'indice des prix à la consommation étaient basés sur les tendances de dépense des familles pour 1957; on peut trouver le détail de ces poids dans la publication *The Consumer Price Index for Canada (1949=100) (Revision based on 1957 Expenditure)*, numéro 62-518 au catalogue. En mai 1973, on a introduit une nouvelle révision des poids afin de prendre en compte les tendances de consommation des familles en 1967 (et, dans l'élément aliments, les habitudes détaillées de dépense en 1969). Le détail complet du dernier schéma de pondération et d'autres renseignements fondamentaux sur l'indice des prix à la consommation figurent dans la publication hors série *L'indice des prix à la consommation du Canada (1961=100) (Révision fondée sur les dépenses de 1967)*, numéro 62-539 au catalogue.

The Consumer Price Index for Canada Reclassified by Goods and Services

A revised supplementary classification system, entitled "The Consumer Price Index Reclassified by Goods and Services", was introduced in May 1973 with the revision of the weighting pattern of the Consumer Price Index to reflect 1967 expenditures.

This supplementary classification introduces an improved framework for regrouping the items which comprise the Index. In it, all items in the C.P.I. have been reclassified into two major categories — goods and services — according to their most characteristic or dominant attribute. The goods component has been sub-divided into three categories: durable, semi-durable, and non-durable goods, according to expected average useful lifetime criteria. Services, on the other hand, have been sub-divided according to broad functional categories.

Historical series conforming to the revised classification system replace the previously published supplementary indexes and are available, with explanatory notes, for the period January 1961 to April 1973 inclusive, in *Retail Prices and Living Costs Service Bulletin*, Catalogue 62-005, Vol. 2 No. 7.

Consumer Price Indexes for Regional Cities (1961 = 100)

Consumer Price Indexes for Regional Cities are published monthly in this bulletin (Table 11). Except for their individual weighting systems, and the fact that they are based on fewer quotations, the regional city indexes are generally similar in concept and item coverage to the Consumer Price Index for Canada.

Prior to May 1973, the city indexes may have underestimated the degree of price movements occurring because the shelter component of the city indexes moved on the basis of changes in rents only, whereas changes in both rents and homeownership costs were, and continue to be, included in the Canada index. As a result of homeownership costs having increased more rapidly than rents, the housing and the all-items indexes for cities tended to underestimate somewhat the rates of price increase particularly over longer periods. From May 1973 forward, however, homeownership costs are included in the regional city consumer price indexes so that the Canada and the regional city indexes are consistent in terms of their content and treatment.

Each city index is designed to measure the influence of changes in retail prices taking place in the locality specified, upon the cost of a fixed basket of goods and services representing the level of consumption of a representative group of families in the particular area specified.

In using the city indexes, it should be remembered that *they do not in any way indicate whether price levels are higher or lower in one city than in another*. Rather, they measure, *within each city*, the percentage change in consumer prices from the base period to subsequent time periods.

L'indice des prix à la consommation au Canada reclassé par biens et services

Un système révisé de classification supplémentaire, intitulé "L'indice des prix à la consommation au Canada reclassé par biens et services", a été introduit en mai 1973 en même temps que la révision des schémas de pondération de l'indice des prix à la consommation afin de rendre compte des dépenses de 1967.

Cette classification supplémentaire regroupe dans un cadre amélioré les éléments de l'indice. En effet, tous les éléments de l'I.P.C. ont été reclassés dans deux grandes catégories, soit la catégorie des biens et celle des services, suivant leur caractère le plus distinctif ou dominant. La catégorie des biens présente trois sous-catégories (biens durables, biens semi-durables, biens non durables) déterminées en fonction de la vie utile moyenne prévisible. D'autre part, on a réparti les services suivant quelques grandes catégories fonctionnelles.

Les séries historiques conformes au système révisé de classification remplacent les indices supplémentaires publiés auparavant, et on peut les trouver, avec des notes explicatives, pour la période janvier 1961-avril 1973, dans la publication "Prix de détail et coût de la vie" - Bulletin de service, numéro 62-005 au catalogue, vol. 2 no 7.

Indices des prix de la consommation dans certaines agglomérations urbaines (1961 = 100)

Ces indices sont publiés tous les mois dans la présente publication (Tableau 11). A l'exception de leurs systèmes de pondération particuliers, et de ce qu'ils font appel à moins de prix, ces indices sont en général semblables par leur concept et par les éléments qui les composent à l'indice des prix à la consommation au Canada.

Avant mai 1973, les indices des agglomérations ont pu sous-estimer le degré de changement des prix, parce que l'élément logement des indices des agglomérations ne variait qu'en fonction de l'évolution des loyers, tandis que l'indice pour le Canada comprenait et ne comprend toujours que les changements de loyers et les coûts de propriété. Comme les coûts de propriété ont augmenté plus vite que les loyers, les indices du logement et l'ensemble pour les villes tendent à sous-estimer quelque peu le taux de croissance des prix, principalement sur des périodes plus longues. A partir de mai 1973, cependant, les coûts de propriété sont inclus dans les indices de prix à la consommation de agglomérations urbaines, de sorte que les indices pour le Canada et les agglomérations urbaines sont homogènes à la fois pour ce qui est de leur contenu et de leur traitement.

Chaque indice de ville est conçu de manière à mesurer l'effet des changements des prix de détail dans la ville en question sur les prix d'un panier constant de biens et de services représentant le niveau de consommation d'un groupe représentatif de familles dans cette ville.

Le lecteur devra toujours garder en mémoire que ces indices *n'indiquent en aucune façon si les prix sont plus élevés dans une ville que dans une autre*. Ils mesurent plutôt dans chaque ville le taux de variation des prix à la consommation à partir de période de base et des périodes subséquentes.

For comparisons of retail price differentials between cities, see Table 14 of this publication and the relevant explanatory notes.

Purchasing Power of the 1961 Consumer Dollar

As consumer prices rise, the sum of money required to purchase an unchanging or equivalent quantity and quality of goods and services increases, and the amount of these items that can be purchased with a fixed sum of money decreases. Conversely, as prices fall, the amount of goods and services that can be purchased with a fixed sum of money increases. Thus, rising prices are associated with declining purchasing power of money and falling prices are associated with its increasing purchasing power.

The purchasing power of the consumer dollar, in other words, bears an inverse relationship to the movement of the Consumer Price Index. For example, by January 1973, compared with their average level in 1961, consumer prices as measured by the C.P.I. were 44.5% higher, so that an equivalent basket of goods and services which could be purchased for \$100.00 in 1961 would cost the consumer \$144.50 in January 1973. Each consumer dollar in January 1973, therefore, buys less than in 1961, and the amount of its reduced value can be expressed in terms of the inverse consumer price movement. Thus, in January 1973 the purchasing power of the 1961 consumer dollar declined to approximately 69 cents ($\$1.00 \times 100.0/144.5 = \0.69).

Users of the tabulation which shows the purchasing power of the 1961 consumer dollar at different points in time (Table 12) should note that, as in the case of the Consumer Price Index from which it is derived, it may not represent closely the experience of any one specific family within the large group to which the C.P.I. relates; nor should it be expected to reflect the experience of other population groups whose income, family size and place of residence are characteristically different. It should also be noted that, like the C.P.I., it is not directly affected by changes in income tax, unemployment insurance premiums and certain other security payments.

Measuring the Purchasing Power of Wages

Changing consumer price levels affect the amounts of consumer goods and services which a dollar will buy, and average wages, insofar as they are spent on such items will, of course, be affected in the same way. A wage measurement which takes the change of consumer prices into account, can be calculated by reducing actual average wages by the percentage rise in consumer price levels, or increasing them if the amount price levels fall. Wages thus adjusted may be used to indicate the comparative purchasing power of average earnings if consumer price levels and consumption patterns had remained constant. The following illustration shows how this kind of an adjustment can be made.

Suppose that a series of average weekly wages rises from \$80.00 in week A to \$100.00 in week B, and that in the same interval a consumer price index advances from 100 to 110.0. Because of the 10% rise in consumer prices, \$1.00 will buy as much in week B as it would in week A. On the

Pour étudier les différences de prix de détail entre les villes, il faut consulter le tableau 14 de la présente publication et les notes explicatives qui l'accompagnent.

Pouvoir d'achat du dollar de consommation 1961

À mesure que les prix à la consommation montent, la somme nécessaire à l'achat d'une quantité et d'une qualité constantes ou équivalentes de biens et de services augmente, et la quantité de ces articles qui peut être achetée avec une somme d'argent fixe diminue. Inversement, à mesure que les prix baissent, la quantité de biens et de services qui peut être achetée avec une somme d'argent constante augmente. Ainsi, la hausse des prix est liée à la baisse du pouvoir d'achat de la monnaie, et la baisse des prix est liée à la hausse du pouvoir d'achat.

Le pouvoir d'achat du dollar de consommation, en d'autres termes, évolue en raison inverse du mouvement de l'indice des prix à la consommation. Ainsi, en janvier 1973, par rapport au niveau de 1961, les prix à la consommation mesurés par l'I.P.C. avaient progressé de 44.5%, de sorte qu'un panier équivalent de biens et de services qui coûtait \$100 à l'achat en 1961 aurait coûté \$144.50 en janvier 1973 au consommateur. Par conséquent, chaque dollar de consommation en janvier 1973 achète moins qu'en 1961, et l'on peut exprimer le montant de sa valeur réduite en fonction de l'inverse du mouvement des prix à la consommation. Ainsi, en janvier 1973, le pouvoir d'achat du dollar de consommation 1961 était tombé approximativement à 69 cents ($\$1.00 \times 100.0/144.5 = \0.69).

Les utilisateurs du tableau qui indique le pouvoir d'achat du dollar de consommation de 1961 à différentes périodes (tableau 12) doivent noter que, comme dans le cas de l'indice des prix à la consommation dont il a été tiré, il peut ne pas suivre de près le cas d'une famille en particulier faisant partie du grand groupe auquel se rapporte l'I.P.C., pas plus qu'il ne rend nécessairement compte des dépenses d'autres groupes de la population dont les revenus, la taille des familles et les lieux de résidence diffèrent sensiblement. Il faut également noter que, tout comme l'I.P.C., in n'est pas touché directement par les changements de l'impôt sur le revenu, les primes d'assurance-chômage et certains autres paiements d'assistance.

Mesure du pouvoir d'achat des salaires

Les changements du niveau des prix à la consommation affectent les quantités de biens et de services de consommation qu'un dollar peut acheter, et les salaires moyens, dans la mesure où ils sont consacrés à de tels articles, seront naturellement touchés de la même façon. Une mesure des salaires qui prendrait en compte les changements de prix à la consommation peut se calculer en réduisant les salaires moyens réels du taux d'accroissement des prix à la consommation, ou en les augmentant dans une proportion égale à la baisse des prix. Les salaires ainsi ajustés peuvent servir à indiquer le pouvoir d'achat comparatif des gains moyens si les prix à la consommation et les tendances de consommation étaient restés constants. L'exemple suivant montre comment on peut procéder à un ajustement de cette nature.

Supposons qu'une série de salaires hebdomadaires moyens passe de \$80 pendant la semaine A à \$100 au cours de la semaine B, et qu'au cours de la même période un indice des prix à la consommation passe de 100 à 110. Par suite de la hausse de 10% des prix à la consommation, \$1 n'achètera pas autant au cours de

other hand, the 25% rise from \$80.00 to \$100.00 will overstate the increase which has occurred in the purchasing power of average weekly wages. This overstatement can be removed by reducing the figure of \$100.00 by the amount of the consumer price index increase. The adjusted average is $\$90.91((100.0/110.0) \times \$100)$, which may be referred to as a weekly wage average for week B expressed in the dollars of period A; or it may be said to indicate the level of real weekly wages relative to week A.

The foregoing calculation can be carried a step further to express, in index number form, the relationship between the week A average of \$80.00 and the week B adjusted figure of \$90.91. Assuming the week A average of \$80.00 as an index equal to 100, the week B index becomes 113.6 $((90.91/80.00) \times 100)$. Such an index may be called an index of average weekly real wages. It indicates that average wages for week B will buy 13.6% more goods and services than they did in week A, in spite of a 10% rise in consumer prices. This 13.6% increase in real wages compares with the 25% rise in money wages $((\$100.00-\$80.00)/\$80.00 \times 100)$.

In Table 13, the index numbers of average weekly wages in manufacturing in current dollar terms (1961 = 100) are calculated by dividing the weekly wages in current dollars by the 1961 average weekly wage in current dollars and multiplying the result by one hundred. For example, the weekly wage index for September 1972 in current dollars (1961 = 100) is 196.4 $((146.23/74.45) \times 100)$. The weekly wages in 1961 dollar terms are determined by dividing the weekly wage in current dollars by the consumer price index for Canada for the month following the month to which the wages relate and multiplying the result by one hundred. Thus, the September 1972 weekly wage in 1961 dollars is \$102.98 $((146.23/142.0) \times 100)$. (The wage and the price data both refer to generally similar time periods: current wages for a particular month relate to the last pay periods in that month, while most prices for the consumer price index of the following month are collected in the first week of that month.)

The index numbers of weekly wages in 1961 dollar terms (1961 = 100) are determined by dividing the weekly wages in 1961 dollars by the base (1961) average weekly wage and multiplying the result by one hundred. For example, the September 1972 weekly wage index in 1961 dollar terms (1961 = 100) is 138.3 $((102.98/74.45) \times 100)$.

It should be noted that while the estimates of average real wages may reflect the experiences of broad groups of workers in manufacturing fairly well, their applicability to individual wage-earners depends upon a number of considerations. For example, individual earnings will differ significantly from the group average, depending upon occupation, industry, geographical location, or sex of the wage-earner. Moreover, individual spending habits differ widely, but the consumer price index which is used to adjust the earnings data refers only to the average consumption pattern of a particular population group. Group spending patterns change over periods of time. To the extent that this occurs, the wage data adjusted by the consumer price index (which has a "fixed" consumption pattern), will gradually be re-

la semaine B qu'au cours de la semaine A. Par contre, la hausse de 25% (de \$80 à \$100) va surévaluer la hausse qui s'est produite dans le pouvoir d'achat des salaires hebdomadaires moyens. Cette surévaluation peut être réduite en réduisant le chiffre de \$100 du montant de l'accroissement de l'indice des prix à la consommation. La moyenne ajustée sera \$90.91 $((100.0/110.0) \times 100)$, et que l'on peut désigner comme étant la moyenne du salaire hebdomadaire pour la semaine B exprimée en dollars de la période A; on peut aussi dire qu'elle indique le niveau réel de salaires par rapport à la semaine A.

On peut pousser ce calcul plus loin, en exprimant à l'aide d'un indice, la relation entre le salaire moyen de \$80 de la semaine A, et le salaire révisé de \$90.91 de la semaine B. En supposant que la moyenne de la semaine A soit un indice égal à 100, l'indice de la semaine B devient 113.6 $((90.91/80.00) \times 100)$. On pourrait appeler un tel indice l'indice de la rémunération hebdomadaire effective. Il indique que le salaire moyen pour la semaine B permettra aux consommateurs d'acheter pour 13.6% de plus en biens et services que pendant la semaine A, et ceci, en dépit de l'augmentation de 10% des prix à la consommation. Cette augmentation effective de 13.6% se compare à l'augmentation de 25% des salaires $((\$100.00-\$80.00)/\$80.00 \times 100)$.

Au Tableau 13, les nombres indices des salaires hebdomadaires moyens dans les industries manufacturières en dollars courants (1961 = 100) s'obtiennent en divisant les salaires hebdomadaires en dollars courants par le salaire hebdomadaire moyen de 1961 en dollars courants et en multipliant le résultat par cent. Ainsi, l'indice des salaires hebdomadaires pour septembre 1972 exprimés en dollars courants (1961 = 100) est 196.4 $((146.23/74.45) \times 100)$. Les salaires hebdomadaires en dollars de 1961 s'obtiennent en divisant les salaires hebdomadaires en dollars courants par l'indice des prix à la consommation pour le Canada pour le mois qui suit celui auquel se rapportent les salaires, et en multipliant le quotient par cent. Ainsi, le salaire hebdomadaire de septembre 1972 exprimé en dollars de 1961 est \$102.98 $((146.23/142.0) \times 100)$. (Les données sur les salaires et les prix portent en général sur des périodes semblables: les salaires courants d'un mois donné sont généralement ceux des dernières périodes de paie du mois, alors que la plupart des prix pour l'indice des prix à la consommation du mois suivant sont recueillis au cours de la première semaine de ce mois.)

Les nombres indices des salaires hebdomadaires en dollars de 1961 (1961 = 100) s'obtiennent en divisant les salaires hebdomadaires en dollars de 1961 par les salaires hebdomadaires moyens de l'année de base (1961) et en multipliant le quotient par cent. Ainsi, l'indice des salaires hebdomadaires pour septembre 1972, exprimés en dollars de 1961 (1961 = 100), sera 138.3 $((102.98/74.45) \times 100)$.

Il convient de souligner que, même si les estimations de salaires réels moyens résument assez bien la situation d'un large éventail de travailleurs dans les industries manufacturières, elle ne peuvent être appliquées aux individus sans quelques précautions. Ainsi, le revenu d'un salarié s'écartera sensiblement de la moyenne du groupe en fonction de sa profession, de l'industrie dans laquelle il travaille, de sa situation géographique ou de son sexe. De plus, les habitudes de consommation varient considérablement d'un individu à l'autre, alors que l'indice des prix à la consommation qui sert à redresser les données sur les gains porte uniquement sur la structure moyenne de consommation d'un groupe déterminé. De même, les habitudes de consommation changent avec le temps. Ainsi, les données sur les gains rajustées par l'indice des prix à la consommation (les habitudes de consom-

ered less valid; the consumer price index weighting pattern was last revised in May 1973, and prior to that, in 1961. Furthermore, some part of income may be saved, and it should be borne in mind that it is not appropriate to reduce savings to a constant dollar basis by using an index which reflects consumption patterns.

It should also be kept in mind that measures of change in real earnings calculated from averages of gross earnings may differ from changes in the purchasing power of "take-home" pay, due to such factors as changes in personal income tax and pay deductions for such things as social insurance and pension plans. Thus index numbers of real wages should not be interpreted as measuring fluctuations in the levels of consumption of wage-earners or wage-earners' families; they are intended to show only the trend in purchasing power of wages over the items covered by the price index, and in addition to the factors already mentioned, do not take into account other family income (including family allowances) or changes in the savings position of families.

The table in this report showing indexes of both actual (current dollar) and real (constant dollar) wages uses 1961 as a reference year. However, any reference period may be chosen as a base since percentage changes between any two periods will be the same regardless of the reference period selected.

Further information regarding Table 13 can be obtained from: Labour Division, Statistics Canada.

Inter-City Retail Price Comparisons

Statistics relating to differences in retail prices between Canadian cities were initially developed for food, and subsequently extended to cover such other elements of the family budget as clothing, transportation, household operation, health and personal care, recreation, education and reading, and tobacco and alcohol. In all, inter-city price comparisons are drawn for commodities and services comprising nearly three-quarters of the budget on which the Consumer Price Index for Canada is currently based with the major omission being shelter (both rented and owned). While recognizing the importance of shelter differentials in any overall comparison of the general price level being countered by consumers in different urban centres, the problems inherent in drawing valid comparisons between cities are such as to require further research. Meanwhile, it is considered that, despite the absence of shelter differentials at this time, publication of retail price comparisons for other elements of the budget will go some distance towards serving the varied needs of users.

Table 14 presents the results of an updating of earlier retail price measurements to May 1971 and includes complete data on several cities. A fuller explanation of the study from which this table is derived is contained in the November 1968, November 1969 and April 1972 issues of *Prices and Price Indexes* (Statistics Canada, Catalogue Number 62-002).

mation étant supposées "fixes") perdront graduellement de leur valeur; le schéma de pondération de l'indice des prix à la consommation a été révisé pour la dernière fois en mai 1973, et avant cela, en 1961. De plus, il ne faut pas oublier qu'une partie du revenu peut être épargnée et qu'il serait faux de recalculer cette épargne en dollars constants à partir d'un indice qui se rapporte à des habitudes de consommation.

De même, il faut se rappeler que l'évaluation des variations des gains effectifs calculées à partir de moyennes effectives peut différer de l'évaluation des variations du pouvoir d'achat du revenu disponible en raison de facteurs tels que l'évolution de l'impôt sur le revenu des particuliers et des retenues destinées à l'assurance sociale, aux régimes de pensions, etc. Ainsi, l'indice de la rémunération effective ne sert pas à mesurer les variations des niveaux de consommation des salariés ou de leurs familles, mais plutôt à montrer les tendances du pouvoir d'achat des salariés par rapport aux articles contenus dans l'indice; enfin, l'indice ne prend pas en compte les autres revenus des familles (tels que les allocations familiales) ou les variations de l'épargne des familles.

La période de référence du tableau qui présente les salaires tant réels (en dollars courants) qu'effectifs (en dollars constants) prend pour base l'année 1961. En fait, on peut choisir n'importe quelle période de référence comme base, puisque les taux de variation entre deux périodes seront les mêmes quelle que soit la période de référence choisie.

On peut obtenir plus de renseignements sur le tableau 13 en s'adressant à la Division du travail, Statistique Canada.

Comparaisons entre les prix de détail d'une ville à l'autre

À l'origine, la statistique des différences entre les prix de détail d'une ville du Canada à l'autre a été mise au point pour l'alimentation; par la suite, on l'a étendue à d'autres postes du budget familial tels que l'habillement, les transports, l'entretien du ménage, la santé et les soins personnels, les loisirs, la formation et la lecture, et le tabac et l'alcool. Au total, les comparaisons d'une ville à l'autre portent sur des biens et des services constituant près des trois quarts du budget servant actuellement à construire l'indice des prix à la consommation au Canada, la seule grande omission étant le logement (location et frais de possession). Sans vouloir nier l'importance des différences en ce qui concerne le logement dans toute comparaison globale du niveau général des prix auxquels les consommateurs doivent faire face dans divers centres urbains, il faut bien dire que les problèmes que comporteraient l'établissement d'une comparaison valable d'une ville à l'autre sont tels qu'ils nécessitent plus de recherche. Entre-temps, on estime que malgré l'absence actuelle de données sur les dépenses de logement, la publication de comparaisons des prix de détail pour d'autres postes du budget permettra de faire de gros progrès en ce qui concerne la satisfaction des besoins variés des utilisateurs.

On trouvera au Tableau 14 le résultat d'une mise à jour de mesures de prix de détail tirées précédemment jusqu'à mai 1971, ainsi que des données plus complètes sur plusieurs villes. Une explication plus détaillée de l'étude dont le tableau en question est tiré figure dans les livraisons de novembre 1968, novembre 1969, et avril 1972 de *Prix et indices des prix* (no 62-002 au catalogue).

The original data base of this study was the wide range of retail price quotations collected in the course of production of the national and urban Consumer Price Indexes. In developing these spatial price comparisons, efforts were made to achieve comparability by equating qualities of goods and services and by matching types of retail outlets, as far as possible. Price relationships between pairs of cities were derived and subsequently converted to a common base of Winnipeg prices equalling 100 to facilitate comparisons over the whole range of cities. Except for foodstuffs and new passenger cars for which inter-city price differentials were derived directly from new comparisons based on May 1971 price data, the updating of these measurements of inter-city retail price differentials was accomplished by application of the relative movement of prices, at the item level in each city, over the intervening periods as derived from the relevant city consumer price indexes. These price relationships at the item level were aggregated on the basis of the Canada urban consumer spending pattern, rather than the patterns applicable to individual cities. While differences in spending patterns exist among cities, the magnitude of these differences in the cities covered is not such as to affect most of the spatial comparisons significantly. Because of the previously mentioned absence of shelter price relationships, which may be of considerable significance in any overall comparison of inter-urban retail price differentials, aggregative indexes beyond major budget groupings are not shown.

The weighting factors used to combine items to group and component levels in Table 14 are based on 1957 expenditures, and therefore will not be identical to the 1967 weights, introduced in May 1973, in Consumer Price Index tables.

It should be noted that the retail prices used in this comparison, being those faced by consumers, include sales and excise taxes as applicable. Variations between provinces in the scale of sales taxes imposed on a wide range of non-food commodities can be of significance in explaining inter-city price differentials for these items.

While these indexes have been expressed in terms of Winnipeg = 100, the selection of Winnipeg as the base city has no special significance, and the indexes may be expressed on the base of any of the individual cities included.

Farm Input Price Indexes (1961 = 100)

Farm Input Price Indexes measure, through time, changes in prices of commodities and services used in Canadian farming operations. The item content and weights are based on data from the 1958 Farm Income and Expenditure Survey, the most recent source of sufficiently detailed data. These data have been modified to reflect 1961 prices and conditions. Farm Input Price Indexes are calculated quarterly for Eastern, Western and all Canada on a 1961 = 100 time base.

Les premières données de base pour la présente étude ont été constituées par l'importante collection de prix de détail recueillie lors de la confection des indices nationaux et urbains des prix à la consommation. Au moment d'établir ces comparaisons géographiques de prix, on s'est efforcé d'assurer la comparabilité en prenant des biens et des services de qualité égale et en assortissant autant que possible les points de vente au détail par type. Les relations de prix entre paires de villes ont été calculées puis converties à la base commune des prix de Winnipeg = 100 afin de faciliter des comparaisons pour l'ensemble de toutes les villes. Sauf pour les denrées alimentaires et les voitures neuves, pour lesquelles les différences de prix entre villes ont été tirées directement de nouvelles comparaisons fondées sur les données de mai 1971, la mise à jour de ces mesures des différences de prix de détail entre les villes a été assurée grâce à l'extension des mouvements relatifs de prix au niveau de chaque article dans chaque ville aux périodes observées selon le calcul établi à partir de l'indice des prix à la consommation pour la ville en question. Ces relations entre les prix au niveau de l'article ont été agrégées sur la base des habitudes de consommation du citoyen pour l'ensemble du Canada et non pas selon les habitudes de dépense applicables à des villes individuelles. Même s'il existe des différences dans les habitudes de dépense d'une ville à l'autre, l'importance de ces différences en ce qui concerne les villes dont il est question ici ne sont pas suffisantes pour influencer sensiblement sur la plupart des comparaisons géographiques. Du fait de l'absence des relations de prix en ce qui concerne le logement, dont il a déjà été question ci-dessus et qui pourrait avoir une importance considérable chaque fois que l'on voudrait tirer une comparaison globale entre les différences de prix à la consommation au détail d'une ville à l'autre, on ne trouvera ici aucun indice synthétique agrégé au-delà des principales composantes du budget.

Les facteurs de pondérations utilisés pour regrouper les articles en groupes et en éléments dans le Tableau 14 sont basés sur les dépenses de 1957; ils ne sont donc pas identiques aux pondérations de 1967 adoptées en mai 1973 dans les tableaux relatifs à l'indice des prix à la consommation.

Il faut remarquer que les prix de détail ayant servi à la présente comparaison sont ceux que doit payer le consommateur et comprennent donc les taxes de vente et les taxes d'accises qui peuvent s'appliquer. Les différences d'une province à l'autre entre les barèmes de taxe de vente imposés sur une grande variété de biens non alimentaires peut avoir une grande importance pour expliquer les différences de prix d'une ville à l'autre pour les articles en question.

Le fait que ces indices aient été exprimés en prenant Winnipeg = 100 ne signifie pas que le choix de Winnipeg comme ville de référence ait une signification particulière et les indices pourraient être exprimés sur la base de n'importe laquelle des villes qui y figurent.

Indices de prix des entrées dans l'agriculture (1961 = 100)

Les indices de prix des entrées dans l'agriculture mesurent l'évolution dans le temps du prix des produits et des services utilisés dans l'exploitation agricole au Canada. Les articles qui sont compris, ainsi que leurs poids, sont fondés sur l'enquête de 1958 sur les revenus et les dépenses des agriculteurs, qui constitue la source la plus récente dont les données soient suffisamment détaillées. Ces données ont été adaptées de manière à rendre compte des prix et des conditions constatées pour 1961. Les indices des prix des entrées dans l'agriculture sont calculés chaque trimestre pour l'Est, l'Ouest et l'ensemble du Canada sur la base 1961 = 100.

Farm Input Price Indexes replace one of the two major component indexes of the previously published series, Price Index Numbers of Commodities and Services Used by Farmers, 1935-39 = 100. The latter index was composed of a Farm Family Living Index and a Composite Index Exclusive of Living Component. The Farm Input Price Indexes replace the Composite Index Exclusive of Living Component from 1961 forward.

A detailed description of concepts, methods and data sources is contained in the occasional paper, *Farm Input Price Indexes, 1961 = 100*, Catalogue No. 62-534, and is reproduced in the September 1971 issue of *Prices and Price Indexes*, Catalogue No. 62-002. The foregoing publications do not contain total and component price indexes for Eastern, Western, and all Canada, from 1961 to and including the third quarter 1971.

Current price indexes will be published on a regular basis in the quarterly publication, *Farm Input Price Indexes, 1961 = 100*, Catalogue No. 62-004, and in the monthly publication *Prices and Price Indexes*, Catalogue No. 62-002.

The Farm Family Living component of the 1935-39 index has not been replaced by an updated counterpart, and publication has been suspended.

Security Price Indexes

Security price indexes measure through time the effect of price change on the value of a portfolio of stocks bought and held by a hypothetical investor (as opposed to the more speculative trader). The portfolio represents stocks of Canadian companies listed on Toronto and Montreal stock exchanges.

The number of shares held for each issue is in proportion to the total number of shares outstanding. Prices in the investor's mining and supplementary stock indexes are Thursday's closing quotations from the exchange (Montreal, Toronto, Vancouver or Calgary) with the highest volume for particular stock, as reported in the Daily Canadian Data Bank of the Financial Post Computer Services Department. For preferred stocks, prices are monthly weighted averages of the daily closing price in which weights are daily total volume. The price reference base for the indexes is the year 1956, and the indexes express prices as a percentage of price 1956, arithmetically converted to the 1961 = 100 base.

Revised indexes on the base 1956 = 100 were first presented in the June 1962 issue of this publication. The most important change in the revision of the indexes, apart from the shift in the price reference base, was the classification of stocks according to the Standard Industrial Classification. In continuing major group Industrials, 4 sub-groups (Mill and Grains, Food and Allied Products, Machinery and Equipment, and Building Materials) were replaced by 8 new sub-groups (Foods, Printing and Publishing, Primary Metals, Metal Fabricating, Non-metallic Minerals, Chemicals, Construction and Retail Trade). The remaining 5 sub-groups of the former index, viz., Industrial Mines, Beverages, Textile

Les indices des prix des entrées dans l'agriculture remplacent l'un des deux principaux éléments d'indices de la série précédente sur l'indice de prix des produits et services utilisés par les agriculteurs, (1935-39 = 100). Cet indice comprenait l'indice du coût de la vie pour les familles agricoles et l'indice synthétique sans le coût de la vie. Les indices des prix des entrées dans l'agriculture remplacent l'indice synthétique sans le coût de la vie à partir de 1961.

Le bulletin hors série *Farm Input Price Indexes, 1961 = 100* (no 62-534 au catalogue) contient une description détaillée des concepts, des méthodes et des sources de données qui est reprise dans *Prices and Price Indexes* de septembre 1971 (no 62-002 au catalogue). Ces deux bulletins contiennent également les indices des prix totaux et partiels pour l'Est et l'Ouest du Canada et pour l'ensemble du Canada, de 1961 au troisième trimestre de 1971 inclusivement.

Les indices des prix en cours seront publiés régulièrement dans le bulletin trimestriel *Farm Input Price Indexes, 1961 = 100* (no 62-004) et dans le bulletin annuel *Prices and Price Indexes* (no 62-002).

On n'a pas remplacé l'indice du coût de la vie pour la famille agricole des séries de 1935-39 par un équivalent à jour et on a cessé de la publier.

Indices des cours des valeurs mobilières

Les indices des cours des valeurs mobilières mesurent dans le temps l'incidence du mouvement des prix sur la valeur d'un portefeuille de titres achetés et détenus par un actionnaire hypothétique (par opposition au spéculateur). Le portefeuille comprend des actions de sociétés canadiennes cotées à la Bourse de Toronto et de Montréal.

Le nombre d'actions détenues pour chaque émission est proportionnel au nombre total d'actions en circulation. Les indices des prix des titres miniers et les indices supplémentaires sont les cours de fermeture de jeudi (Montréal, Toronto, Vancouver et Calgary) affichant le volume le plus élevé pour une valeur en particulier, d'après la Banque des données canadiennes quotidiennes du Service de l'informatique du *Financial Post*. Pour les actions privilégiées, les prix sont les moyennes pondérées mensuelles des cours de clôture de chaque jour et les poids, le volume quotidien total. La période de référence pour les indices est l'année 1956 et les indices représentent les prix exprimés en pourcentage des prix de 1956 recalculé sur la base 1961 = 100.

Les indices révisés sur la base 1956 = 100 ont été publiés pour la première fois dans la livraison de juin 1962 de cette publication. La modification la plus importante à la révision de l'indice, à part le changement de la période de référence, a été le classement des actions d'après la Classification des activités économiques. Dans le cas du grand groupe des valeurs industrielles, 4 sous-groupes (minoterie et céréales, aliments et produits connexes, machines et matériel et matériaux de construction) ont été remplacés par 8 nouveaux sous-groupes (aliments, imprimerie et édition, métaux primaires, produits métalliques, minéraux non métalliques, produits chimiques, construction et commerce de détail). On a conservé les 5 autres sous-groupes de l'ancien indice:

and Clothing, Pulp and Paper, and Oils (renamed Petroleum) were continued. The major group utilities was continued but the Pipelines index was added as a sub-group and the previous Power and Traction sub-group was replaced by two new sub-groups, viz., Electric Power and Gas Distribution. A major group Finance was composed of the former major group Banks and the former supplementary index Investment and Loan. Constant weights which were previously limited to major groups, were extended to sub-groups. Weights in the index continue to be based on shares outstanding.

A revision of the Security Price Indexes to the 1971 = 100 base is under development.

For the list of stocks currently included in the Investors Index and Preferred Index, see *Prices and Price Indexes* for March 1974.

Residential and Non-Residential Building Construction Price Indexes

The fixed-weighted input price indexes of materials and wage rates for residential and non-residential building construction are being published here for the convenience of users (Table 20). A more complete description of the characteristics of the indexes appeared in the May 1970 issue of *Prices and Price Indexes*, and this explanation is available on request from the Prices Division, as is historical monthly data for the series.

Because the indexes measure the impact of price change on the materials and labour inputs to construction, and not the effects of changes in profit margins or productivity, there is thought to be an upward bias in these indexes as indicators of price change for the output of building construction, or buildings in place. Users are therefore warned to exercise caution in making use of the series, for this purpose. A comparison of these series with the implicit price deflators(1) providing an estimate of price change for the output of the industry, derived from the measurement of gross fixed capital formation in constant dollars, will provide some insight into the effects on the price movement of adjusting the fixed-weighted input indexes for changes in productivity and profit margins.

During the period from 1926-1966 a special sample or respondents supplied materials prices for the index. As of 1961 this sample has been replaced with prices from the ISPI system(2). The latter are published monthly in Table 2 of this publication.

The Construction wage rate series is based on wage rate material supplied by the Labour Standards Branch, Dept. of Labour, and relates to minimum wages paid on government contracts for construction in a variety of trades and cities.

mines industrielles, boissons, textiles et habillement, pâte et papiers, et huiles (sous la désignation de pétrole). Le grand groupe de services d'utilité publique a été conservé mais l'indice des pipelines a été ajouté comme sous-groupe et l'ancien sous-groupe d'énergie et traction a été remplacé par deux nouveaux sous-groupes: l'énergie électrique et la distribution du gaz. Le nouveau grand groupe "Finances" est composé de l'ancien grand groupe banques et de l'ancien indice supplémentaire investissements prêts. Les facteurs constants de pondération qui étaient autrefois limités aux grands groupes s'appliquent maintenant aux sous-groupes. Les facteurs de pondération de l'indice continuent à être basés sur les actions en circulation.

On prépare actuellement une révision des Indices des cours des valeurs mobilières sur la base 1971 = 100.

La liste des titres repris actuellement dans les indices des valeurs de placements et dans les indices des valeurs privilégiées se trouve dans *Prix et indices des prix* de Mars 1974.

Indices des prix de la construction résidentielle et non résidentielle

Les indices à pondération fixe des prix des entrées de matériaux et de salaires dans la construction résidentielle et non résidentielle sont publiés ici pour faciliter la tâche aux utilisateurs (Tableau 20). On trouvera une description plus détaillée de caractéristiques des indices dans *Prices and Price Indexes* de mai 1970. On peut s'en procurer un exemplaire ainsi que les données mensuelles chronologiques sur cette série en s'adressant à la Division des prix.

Comme les indices mesurent l'influence des variations de prix sur les entrées de matériaux et de main-d'oeuvre du bâtiment plutôt que les répercussions des variations de marges bénéficiaires ou de productivité, on les croit surestimés en tant qu'indicateurs des variations de prix de la construction, ou des bâtiments construits. Les utilisateurs devront donc faire preuve de discernement quand ils se serviront des séries à cette fin. Si l'on compare ces séries avec les facteurs de dégonflement(1) des prix implicites (qui donnent une estimation de la variation du prix pour la production de l'industrie), obtenus en mesurant la formation brute de capital fixe en dollars constants, on aura un aperçu des effets de l'ajustement sur l'évolution des prix des indices à pondération fixe des entrées pour tenir compte des variations de productivité et de marges bénéficiaires.

Au cours de la période 1926-1966, un échantillon spécial d'enquêtés a donné les prix pour l'indice. En 1961, on a remplacé cet échantillon par les prix tirés du système I.P.V.I.(2). Ces prix sont publiés par mois dans le Tableau 2 du présent bulletin.

La série consacrée au taux de rémunération dans l'industrie du bâtiment est basée sur les chiffres fournis par la Direction des normes du travail du ministère du Travail; elle a trait au salaire minimum versé aux termes de marchés signés avec le gouvernement pour des travaux de construction dans divers corps de métiers et dans diverses villes.

(1) Gross National Product Division, Statistics Canada.
(2) *Industry Selling Price Indexes 1956-1968* Cat. 62-528.

(1) Division du produit national brut, Statistique Canada.
(2) *Indices des prix de vente dans l'industrie, 1956-1968*, 62-528 au catalogue.

Users are reminded that the indexes were arithmetically rebased to the year 1961 = 100 and therefore combining the components with the weights as shown will not provide a composite index provided. Users able to provide their own weights for the components can recombine the components to suit their particular needs.

Basic Union Wage Rate Indexes for Major Construction Trades

Basic union wage rate indexes are prepared for 12 major construction trades in each of 14 cities in Canada. Weighted average city indexes are prepared as well as a 14 city composite. Indexes are released quarterly in summary form in Tables 21 and 22 of Prices and Price Indexes (62-002). This index is found in Table 20 of Prices and Price Indexes (62-002). Full trade detail, by city, is published quarterly in the Construction Price Statistics Service Bulletin, (62-006).

Rates utilized in index calculations are derived mainly from the *Construction Collective Agreement Survey Service* provided by the Canadian Construction Association. These rates are supplemented as necessary by surveys of some non-union locals. While indexes containing supplementary benefits will be available soon, presently published indexes relate to basic union wage rates only. The rates indicate the rate of overtime time compensation for one hour in the city specified. These converted into the form of ratios were combined into weighted average city indexes utilizing 1961 Census of population data on numbers of people employed by trade and average earnings in the construction industry.

The base-weighted indexes provide an estimate of the impact of rate change on basic union wages for the major construction trades employed in a given city. Because union workers in cities tend to be engaged mainly in non-residential commercial building construction and because rates for trades associated with engineering work were excluded from the price sample the indexes best approximate wage rate change for non-residential construction.

Highway Construction Price Indexes (1961 = 100) (3)

The Price Indexes of Highway Construction in Canada express prices paid by provincial governments in contracts awarded for highway construction each year, as a percentage of prices paid in 1961. The arithmetic conversion of the indexes to a 1961 time base does not change their percentage movements as compared to the previously published indexes to a 1956 = 100 time base. Users are warned that an aggregation of the converted major group indexes and the published weights will not yield the published 1961 = 100 all items indexes. The conversion does not create a problem for a user wishing to reweight the converted major group indexes using weights appropriate to this own purpose.

The years refer to fiscal years. Thus 1968 refers to the period April 1, 1968 to March 31, 1969.

Nous rappelons aux utilisateurs que les indices ont été recalculés sur la base 1961 = 100 et qu'ils n'obtiendront pas l'indice synthétique fourni en combinant les éléments et les pondérations donnés. Les utilisateurs qui sont à même de fournir leur propre pondération pour les éléments peuvent procéder à leur propre combinaison adaptée à leurs besoins spécifiques.

Indices du salaire syndical de base dans les principaux corps de métiers

Les indices du salaire syndical de base portent sur les 12 principaux métiers de la construction dans 14 grandes villes canadiennes. On calcule les indices pondérés moyens pour chaque ville de même que l'indice synthétique des 14 villes. Les indices sont publiés chaque trimestre dans les Tableaux 21 et 22 de la publication *Prix et indices des prix* (numéro de catalogue 62-002). On peut trouver cet indice dans le Tableau 20 de la publication *Prix et indices des prix* (no 62-002). Des données détaillées sur tous les métiers de la construction dans chaque ville sont publiés chaque trimestre dans le bulletin de service *Statistique des prix dans la construction* (numéro de catalogue 62-006).

Les taux utilisés dans le calcul des indices proviennent principalement de la publication *Construction Collective Agreement Survey Service* de l'Association canadienne de la construction. Des enquêtes auprès de certaines succursales de syndicats ont été menées lorsqu'il fallait disposer de taux supplémentaires. On publiera sous peu des indices contenant les avantages supplémentaires, mais les indices actuels portent uniquement sur le salaire syndical de base. Les taux correspondent à la rémunération normale pour une heure dans la ville en question. Les taux convertis en ratios ont été transformés en indices pondérés moyens des villes à partir des données tirées du recensement de la population de 1961 sur les effectifs de chaque métier et les gains moyens dans l'industrie de la construction.

Les indices pondérés permettent d'évaluer l'influence de la variation du taux des salaires syndicaux pour les principaux métiers de la construction dans une ville donnée. Étant donné que les travailleurs syndiqués dans les villes s'occupent surtout de la construction non résidentielle, ou commerciale, et que les taux des métiers relevant du génie civil n'ont pas été inclus dans l'échantillon des prix, les indices constituent la meilleure approximation des variations dans les taux de salaire dans la construction non résidentielle.

Indices des prix de la construction routière (1961 = 100) (3)

Les indices des prix de la construction routière au Canada représentent les prix payés chaque année par les administrations provinciales au titre des marchés de construction routière, en pourcentages des sommes payées en 1961. La conversion des indices à la base 1961 = 100 ne modifie pas leur évolution en pourcentages comparativement aux indices publiés précédemment et dont la base était 1956 = 100. Les utilisateurs ne doivent pas s'attendre à ce que le groupement des indices convertis des grands groupes et des pondérations publiées donne l'indice général publié (1961 = 100). Cette conversion ne pose aucun problème à l'utilisateur qui désire réviser la pondération des indices convertis des grands groupes en utilisant les poids adaptés à ses fins propres.

(3) Il s'agit d'exercices financiers. 1968 représente donc la période de 1er avril 1968 au 31 mars 1969.

Base-weighted indexes are published annually and measure, for the period 1956 to 1968, the effect of price change on the cost of specific programmes of highway construction in Canada represented by highway construction contracts of approximately \$50,000 or more awarded by specified provincial governments during the weight-base period. Weights of items in the index, representing the relative importance of units of construction in the year 1956 are held constant. Only the estimates of prices change from year to year, and the indexes thus measure the movement of prices through time. For a more complete statement of the problem of estimating price change for highway construction see pages vi & vii of the December 1967 issue of *Prices and Price Indexes*, Catalogue 62-002 and pages 9 & 10 of the reference paper *Price Indexes of Highway Construction* in Catalogue 62-520. The all-items index or its components are useful for planning and budgeting for highway construction programmes, in escalating or updating previously costed roadwork, in estimating replacement cost of previously completed roadwork, and as historical measurements of price trends in highway construction.

The indexes do not necessarily reflect the price movements of non-contract construction or maintenance work. The indexes are designed to measure price changes for a fixed programme of highway construction, in each of the seven provinces. Because price levels in the time base-period (1961) varied from province to province the indexes cannot be used to compare price differences between provinces, but only to compare differences in the rate at which prices are changing in the provinces.

Prices contained in the index are not for units of labour and materials as is usually the case in construction price indexes but rather for units of construction work put in place such as an acre of clearing, a cubic yard of earth excavation or a ton of bituminous hot-mix paving. In addition, the index contains prices of some materials, such as culvert pipe, usually supplied to the contractor by the highway departments. Prices of highway construction work are annual weighted averages of bid prices of units of construction in groups of contracts awarded, classified by price-determining characteristics of the contracts and the bid items such as volume of the bid item, type of contract and geographic location. Prices of material items of supply are prices paid by government departments to suppliers.

Price Indexes of Electric Utility Construction

In electric utility terms, the index is designed to provide an estimate of the impact of price change on the cost of materials, labour and equipment used in constructing and equipping electric utilities in a specified base period. The index provides an estimate of how much more, or less it would cost to reproduce the base-period programme of construction in another period, using the same construction technology as in the base period and assuming rates of profit and productivity in construction are the same in both periods.

Les indices pondérés en fonction de la base sont publiés chaque année; ils mesurent, pour la période allant de 1956 à 1968, l'influence de l'évolution des prix sur le coût des programmes spécifiques de construction de routes au Canada représenté par les marchés de construction de routes d'environ \$50,000 ou plus accordés par certaines administrations provinciales au cours de la période visée par la base de pondération. Les poids des éléments des indices qui représentent l'importance relative des unités de construction en 1956 sont constants. Seules les estimations de prix varient d'une année à l'autre; les indices mesurent donc l'évolution des prix dans le temps. Pour plus de détails sur l'estimation de l'évolution des prix pour la construction routière, se reporter aux pages vi et vii du numéro de décembre de *Prices and Price Indexes* (Numéro 62-002 au catalogue de Statistique Canada) et aux pages 9 et 10 du bulletin intitulé *Price Indexes of Highway Construction in Canada* (no 62-520 au catalogue de Statistique Canada). L'indice général ou ses éléments servent à la planification et à la budgétisation des programmes de construction routière, à indexer ou à mettre à jour les prix de travaux de routes effectués précédemment, à estimer le coût de remplacement des travaux routiers achevés précédemment et à mesurer chronologiquement l'évolution des prix de la construction routière.

Les indices ne reflètent pas nécessairement l'évolution des prix de la construction effectués hors marché ou des travaux d'entretien; ils servent à mesurer les variations de prix pour un programme déterminé de construction routière dans chacune des sept provinces. Au cours de la période qui a servi de base (1961), les niveaux de prix ont varié d'une province à l'autre; aussi, on ne peut utiliser les indices pour comparer des différences de prix entre les provinces mais on peut seulement les employer pour comparer les différences entre taux de variation des prix dans les provinces.

Les prix compris dans l'indice ne se rapportent pas aux unités de travail ni de matériaux comme c'est habituellement le cas dans l'indice des prix de la construction; ils se rapportent plutôt aux unités de travail de construction effectué, comme le défrichage d'une acre de terrain, l'excavation d'une verge cube ou l'épandage à chaud d'une tonne de béton bitumineux. En outre, l'indice comprend le prix de certains matériaux, par exemple, les tuyaux de ponceau fournis habituellement à l'entrepreneur par les ministères de la Voirie. Les prix des travaux de construction routière sont des moyennes pondérées des prix de soumission pour les unités de construction par groupe de marchés classés selon les caractéristiques des marchés qui déterminent le prix et les éléments d'offre tels que le volume de chaque poste, le type de marché et la situation géographique. Les prix de matériaux fournis sont les prix payés par les ministères aux fournisseurs.

Indices des prix à la construction dans les services d'électricité

En ce qui concerne les services d'électricité, l'indice a pour but de fournir une estimation des conséquences des variations de prix sur le coût des matériaux, de la main-d'œuvre et du matériel utilisés dans la construction et l'équipement des services d'électricité au cours d'une période de référence donnée. L'indice sert à mesurer combien il faudrait payer en plus ou en moins pour réaliser un programme de construction identique à celui de la période de référence en utilisant les mêmes techniques de construction et en supposant que les taux de rentabilité et de productivité de la construction soient les mêmes pour les deux périodes.

As the market does not yield comparable selling prices for such unique transactions as, for example, the sale of a transmission line, it was not possible to produce an index of the prices of completed structures. Completed structure indexes would be appropriate for users wishing either to estimate reproduction costs or to deflate capital formation. For such uses the indexes introduced in this publication have specific short-comings. Nonetheless, they may be helpful for other purposes provided the users understand the deficiencies. As the reader is asked to make particular note of Section 6 of Occasional Paper Catalogue 62-526 Price Indexes of Electrical Utility Construction - The Necessity for Compromise and Section XI, (of the same paper) Uses and Limitations. In addition, because particular construction projects are unique, the aggregate indexes will not likely be appropriate for specific projects since they relate to an average mix of materials, labour and equipment derived from a variety of projects in a specific base period. Thus, if the component price indexes and their weights included in the aggregate index presented herein are inappropriate for a particular purpose the user should consider selecting appropriate component indexes from among those published herein. These indexes could then be combined into an aggregate index by assigning weights derived from the projects or assets to be indexed or deflated.

Prices used in the indexes are for the most part selling prices reported monthly by manufacturers for materials or equipment. The price reported is for units and terms of sale representative of the volume sales of the manufacturer. Where sales to electric utilities form a small share of the total sales of the manufacturer, the price reported may not adequately represent the price to the construction trade and users directly involved in constructing and equipping electric utility facilities. In such cases, prices charged other manufacturers or wholesalers have been included in the index. General sales tax changes are reflected in the index but no adjustments have been made for provincial tax changes. Until December 1964 wage rate data were supplied by the Federal Department of Labour and represented minimum hourly rates paid to construction workers in major cities employed on federal government contracts. In 1965 union wage rates reported by major utilities and some contractors were incorporated into the index. The sample selected provides an estimate of wage rate change for urban on account and contract electric utility construction. Some further improvements will be made to improve the coverage relating to rural non-union work for transmission lines.

Construction has been defined as new construction or reconstruction for distribution systems, transmission and transformation or switching stations. Maintenance and operating costs are excluded. Cost data were supplied by utilities, relating to own account and to contract construction erected during the last half of the 1950's. Weights were derived from these data which indicated the relative importance of the major inputs to the construction. Components of cost relating to distribution and transmission facilities encompass such items as poles, hardware, conductors, insulators, meters, distribution transformers and

Comme il est impossible d'obtenir directement sur le marché des prix de vente comparables pour des opérations de caractère aussi unique, par exemple, que la vente d'une ligne de transport d'énergie, Statistique Canada n'a pu établir un indice du prix des installations en place. Un tel indice ne serait utile que si l'on désirait obtenir une estimation des sommes qu'il faudrait engager pour réaliser à nouveau un programme de construction identique ou encore pour dégonfler une formation de capital. Les indices publiés ici présentent en ce sens certaines lacunes. Ils peuvent néanmoins servir à de telles fins pourvu que les utilisateurs en comprennent les limites. Les lecteurs peuvent se rapporter aux Sections III et XI de la publication *Price Indexes of Electrical Utility Construction* (Statistique Canada, 62-526): "The Necessity for Compromise" et "Uses and Limitations". De plus, en raison du caractère unique de chaque projet de construction, l'indice synthétique ne pourra sans doute pas s'appliquer à un projet bien précis car il porte justement sur une moyenne des matériaux, de la main-d'oeuvre et du matériel utilisés dans la réalisation de plusieurs projets au cours d'une période de référence donnée. Ainsi, si les indices détaillés et les poids correspondants qui composent les indices synthétiques présentés ici ne conviennent pas à un usage bien précis, l'utilisateur pourra toujours se servir des autres indices détaillés et construire, à l'aide des coefficients de pondération, les indices de son choix, soit pour évaluer le coût d'un projet, soit pour établir des facteurs de dégonflement.

La plupart des prix des matériaux et du matériel utilisés pour établir les indices sont les prix de vente déclarés mensuellement par les fabricants. Ces prix sont représentatifs des unités de mesure et des conditions de vente valables pour les ventes en grande quantité de fabricants. Lorsque les ventes aux services électriques ne représentent qu'un faible pourcentage du chiffre d'affaire d'un fabricant, il est possible que le prix déclaré ne représente pas de façon satisfaisante le prix consenti aux entreprises en construction et aux autres industries s'occupant directement de construction et d'installation de services d'électricité. Dans ces cas, on a inclus dans l'indice les prix facturés aux autres fabricants ou grossistes. On a tenu compte, dans l'établissement de l'indice, des variations de la taxe de vente fédérale; toutefois, il n'a été fait aucun redressement pour les variations de taxe provinciale. Jusqu'en décembre 1964, les données sur les taux de rémunération étaient fournies par le ministère fédéral du Travail et représentaient le salaire horaire minimum versé aux personnes travaillant au titre d'un marché accordé par le gouvernement fédéral dans certaines grandes villes. En 1965, on fit entrer dans l'indice le salaire de base exigé par les syndicats et déclaré par les principaux services et par certains entrepreneurs. L'échantillon choisi représente donc une estimation des variations du taux de rémunération dans la construction en ville de services électriques pour compte propre ou au titre d'un marché. Certaines améliorations à l'indice sont prévues de façons à l'étendre aux personnes non syndiquées travaillant dans les régions rurales à la construction de lignes de transport d'énergie.

Le terme "construction" a été défini comme étant la construction neuve ou la réparation des réseaux de distribution, de lignes de transport d'énergie, de postes de transformation ou de postes de manoeuvre. L'entretien et les frais d'exploitation ne sont pas compris. Les données sur les prix de revient sont fournies par les principaux services d'électricité et portent sur la construction exécutée pour compte propre ou au titre d'un marché au cours de la deuxième moitié des années cinquante. Les poids tirés de ces données représentent l'importance relative des principaux éléments entrant dans la construction. Les composantes du coût de la distribution et du transport comprennent certains éléments comme

expenditures for labour, e.g. - linemen and groundmen. Costs relating to construction equipment such as trucks, and components of equipment operating costs such as tires, gasoline and repairs were also included. Transformation and switching stations encompass some of the items listed above but the most important elements of cost relate to transformers and switching equipment. Expenditures for land and rights-of-way have been excluded.

The term Canadian electric utility has been defined to include municipal as well as nonmunicipal utilities but the majority of the cost data tabulated was derived from the major nonmunicipal utilities. Manufacturers who produce electricity for their own use and who may also sell electricity have been excluded from the cost survey.

Price Indexes of Hydro-electric Generating Stations

The following additional points may be of assistance to users of the hydro-electric generating stations index which was described in some detail in Statistics Canada Occasional Paper, Catalogue 62-533.

- (a) Wage rate data are derived from a variety of sources but mainly from the Canadian Construction Association surveys of union agreements and from Federal Pay Research Bureau studies of salaries paid professional, technical and clerical personnel. Basic wage rates, excluding fringe benefits, were used in index calculations.
- (b) Prices for ready-mix concrete and for earth and gravels in place have been utilized as replacements for input prices of labour, materials and equipment rental for concrete production and embankments in place.
- (c) Prices are included for some categories of expense not previously included in input price indexes for construction: interest during construction, overhead expense and the provision and operation of temporary camp accommodation.
- (d) Weighting patterns exclude expenditure for ancillary facilities for logging and navigation permanent houses, etc.

Price Indexes of Machinery and Equipment

In response to the need of users wishing either to correct expenditure data of machinery and equipment for price change or to make comparison of commodity movement, a system of machinery and equipment indexes has been under development for a number of years. This is a system of industry indexes relating to types of equipment purchases made by establishments belonging to industries as defined by the 1960 Standard Industrial Classification.

les poteaux, la quincaillerie, les conducteurs, les isolateurs, les compteurs, les transformateurs de distribution et les dépenses en main-d'oeuvre (monteurs, personnel de service, etc.). Les dépenses entraînées par le matériel de construction (camions et pièces d'équipement) et les frais d'exploitation (pneus, essence et réparations) sont également inclus. Les postes de transformation et les postes de transformation et les postes de manœuvre comprennent certains des éléments ci-dessus; les frais les plus importants sont cependant entraînés par les transformateurs et les appareils de connexion. Les dépenses foncières et les droits de passage ont été exclus.

Par définition, l'expression "service d'électricité canadien" englobe aussi bien les services municipaux que les autres; toutefois, la majeure partie des données de coût ont été tirées des déclarations des services non municipaux. Les fabricants qui produisent de l'électricité destinée à l'auto-consommation et qui peuvent également vendre de l'électricité ont été exclus de cette enquête.

Indices de prix des centrales hydroélectriques

Les points supplémentaires ci-après peuvent aider les utilisateurs de l'indice de centrales hydroélectriques décrit en détail dans le bulletin hors-série de Statistique Canada portant le numéro 62-533.

- (a) Les données sur le taux de rémunération proviennent de diverses sources et surtout des enquêtes sur les accords syndicaux de l'Association canadienne de la construction et des études du Bureau de recherche sur les traitements portant sur la rémunération des travailleurs intellectuels des techniciens et du personnel administratif. Pour le calcul de l'indice, on a utilisé les taux de rémunération de base et les avantages sociaux non compris.
- (b) Au lieu du prix des entrées de main-d'oeuvre, de matériaux et de location de matériel pour la production de béton et des remblais effectués, on a utilisé le prix du béton préparé et celui de la terre et du gravier en place.
- (c) L'indice comprend les prix correspondant à certains postes de dépenses qui n'étaient pas repris auparavant dans les indices de prix des entrées dans la construction: intérêt pendant la construction, frais généraux, fourniture et entretien de barraquements temporaires.
- (d) Les facteurs de pondération ne comprennent pas les dépenses affectées aux installations auxiliaires pour l'exploitation forestière et la navigation, les maisons permanentes, etc.

Indices des prix des machines et du matériel

Afin de répondre au besoin des utilisateurs qui désirent réviser les données sur les dépenses en machines et en matériel ou fonction des changements de prix ou établir une comparaison du mouvement des marchandises, on prépare depuis un certain nombre d'années un système d'indices des prix des machines et du matériel. Il s'agit d'un système d'indices par industrie ayant trait aux genres d'achats de matériel des établissements qui font partie des industries définies dans la Classification type des industries de 1960.

The base-weighted indexes give an estimate of how much more, or less, it would cost today to purchase a group of machines specified for a particular base period.

The interim time base for the indexes is 1968 = 100 and most of the data from which weighting patterns were derived came from 1968 or nearby years. Such data were usually supplied by major purchasers.

Conceptually purchasers' prices should be utilized in such indexes but because of a number of practical problems, manufacturers' selling prices were usually used. Such prices were then corrected as relevant for duty, exchange and federal sales tax.

Foreign prices utilized in the index are either U.S. Bureau of Labour Statistics commodity indexes or Prices Division collections from manufacturers most of whom reside in the United States.

The first industry index was released mid-1971 and related to purchases by the construction industry. Indexes for other industries will be released from time to time as they become available. In the interim preliminary indexes for a number of other industries are available on request. Certain commodity indexes which exclude adjustments for exchange, duty and federal sales tax can also be provided on request.

Les indices pondérés en fonction de la base donnent une estimation de la différence du prix d'achat d'un groupe de machines déterminé pour une période de base donnée.

La base provisoire pour les indices est 1968 = 100. La plupart des données dont on a extrait les facteurs de pondération dataient de 1968 environ. D'habitude, ces données étaient fournies par les principaux acheteurs.

Du point de vue conceptuel, on devrait utiliser les prix des acheteurs dans ce genre d'indices, mais on a habituellement employé les prix de vente de fabricants pour des questions d'ordre pratique. On a ensuite apporté à ces prix les corrections appropriées pour les droits de douane, le change et la taxe de vente fédérale.

Les prix étrangers utilisés dans l'indice sont les indices de prix des marchandises du *U.S. Bureau of Labour Statistics* ou ceux que la Division des prix a recueillis auprès des fabricants dont la majorité réside aux États-Unis.

Le premier indice par industrie a été publié au milieu de 1971; il se rapporte aux achats de l'industrie de la construction. Les indices des autres industries seront publiés de temps à autre, à mesure qu'ils seront disponibles. En attendant, on peut obtenir sur demande les indices préliminaires pour un certain nombre d'autres industries. Il en est de même pour certains indices de prix de marchandises, compte non tenu des ajustements pour le change, les droits de douane et la taxe de vente fédérale.

SYMBOLS

The following standard symbols are used in Statistics Canada publications:

- . . Figures not available.
- . . . Figures not appropriate or not applicable.
- Nil or zero.
- - Amount too small to be expressed.
- p Preliminary figures.
- r Revised figures.
- x Confidential to meet secrecy requirements of the Statistics Act.

SIGNES CONVENTIONNELS

Les signes conventionnels suivants sont employés uniformément dans les publications de Statistique Canada:

- . . Nombres indisponibles.
- . . . N'ayant pas lieu de figurer.
- Néant ou zéro.
- - Nombres infimes.
- p Nombres provisoires.
- r Nombres rectifiés.
- x Confidentiels en vertu des dispositions de la Loi sur la Statistique relatives au secret.

NOTES ON PRICES AND PRICE INDEX NUMBERS

Industry Selling Price Index: Manufacturing (1961 = 100)

The industry selling price index (Total Manufacturing) moved 1.5% higher in August to 175.7 from the July index of 173.1. It was 18.8% higher than the August 1973 index of 147.9.

In terms of relative contribution to the overall change in the total manufacturing index the more notable changes were increases recorded in the food and beverages group (4.4%), particularly in the sugar refineries industry (21.3%), slaughtering and meat packing (2.5%), feed manufacturers (2.9%), and as a result the group index now stands at more than twice its 1961 level, and (4.6%) above the comparable month of 1972.

The paper and allied products group rose (1.4%) as a result of increases in the pulp and paper mills industry (1.5%). The chemical products group rose (1.6%) due to higher prices recorded in the manufacturing of industrial chemical industry (2.5%). Declines occurred in the wood products group (-3.4%) particularly sawmills and planing mill (-3.3%) and veneer and plywood mills (-10.2%). In the petroleum and coal products group some gasoline prices eased slightly.

NOTES SUR LES PRIX ET LES INDICES DES PRIX

Indice des prix de vente dans l'industrie: Industries manufacturières (1961 = 100)

L'indice des prix de vente dans l'industrie pour l'ensemble des industries manufacturières a progressé de 1.5%, passant de 173.1 en juillet (indice rectifié) à 175.7 en août. Il était supérieur de 18.8% à l'indice d'août 1973 (147.9).

Les principaux facteurs qui ont contribué à faire monter l'indice total ont été une hausse du groupe des aliments et boissons (4.4%), en particulier dans l'industrie du raffinage du sucre (21.3%), de l'abattage et du conditionnement de la viande (2.5%) et de la fabrication d'aliments pour animaux (2.9%). Pour cette raison, l'indice d'ensemble est maintenant plus de deux fois supérieur à celui de 1971 et il dépasse celui du mois correspondant de 1972 de 46.0%.

Le groupe des produits du papier et activités connexes a augmenté de 1.4% en raison des hausses enregistrées dans l'industrie des pâtes et papiers (1.5%). L'indice du groupe des produits chimiques a augmenté de 1.6% à la suite de hausses des prix enregistrées dans l'industrie des produits industriels (2.5%). Il y a eu des baisses dans le groupe des produits du bois (-3.4%), en particulier dans les scieries (-3.3%) et dans l'industrie de placages (-10.2%) et de contre-plaqué. Dans le groupe des produits du pétrole et du charbon, on a observé de légères baisses de prix de certaines catégories d'essence.

General Wholesale Price Index (1935-39=100)

The general wholesale price index rose 1.4% in August to 469.3 from the revised July index of 462.7. All of the eight groups increased from last month.

The vegetable products group index rose 4.1% in August to 482.9 from the revised 463.8 due notably to higher prices for sugar and its products, whose index rose 20.3% between July and August, (186.8% higher than August 1973) and to livestock and poultry feeds. An advance of 1.9% to 348.7 from the revised July index of 342.2 in non-metallic minerals reflected price increase for sulphur (now more than two and a half times its August 73 level) salt, coke, asbestos and clay and allied products. Higher prices for gold, zinc and its products and aluminum were chiefly responsible for an increase of 1.3% to 428.6 from the revised 423.2 in non-ferrous metals group index. The animal products group index moved 1.0% higher to 502.2 from the revised 497.3 on price increases for lard and tallow and cured meats. Advances of a lesser degree were recorded in four major group indexes, chemical products 0.5% to 333.2 from the revised 331.6, textile products and iron products both increased 0.2%, textile products to 429.8 from 428.8 and iron products to 454.6 from the revised 453.6. Wood products increased 0.1% to 581.2 from the revised 580.7 as higher prices for newsprint and wrapping paper outweighed lower prices for timber.

Indice général des prix de gros (1935-39=100)

L'indice général des prix de gros a augmenté de 1.4 passant de 462.7 en juillet (indice rectifié) à 469.3 en août. Les huit groupes principaux ont augmenté par rapport au mois précédent.

L'indice du groupe des produits d'origine végétale a augmenté de 4.1%, passant de 463.8 en juillet (indice rectifié) à 482.9 en août, notamment en raison de la hausse des prix du sucre et de ses dérivés, dont l'indice a augmenté de 20.3% entre juillet et août (il s'agit d'une progression de 186.8% par rapport à août 1973) et de celui du prix des aliments pour la volaille et le bétail. L'indice du groupe des minéraux non métalliques est passé de 342.2 en juillet (indice rectifié) à 348.7 en août à la suite de la hausse du prix du soufre (qui est maintenant plus de deux fois et demi supérieur à celui d'août 1973), du sel, du coke, de l'amiant et de la glaise et ses dérivés. L'augmentation des prix de l'or, du zinc et de ses produits ainsi que de l'aluminium est la principale raison de la hausse de 1.3% de l'indice du groupe des métaux non ferreux, lequel est passé de 423.2 en juillet (indice rectifié) à 428.6 en août. L'indice du groupe des produits d'origine animale a progressé de 1.0%, passant de 497.3 (indice rectifié) à 502.2 en août en raison de la hausse du prix des graisses animales, du suif et de la viande salée. Des progressions de moindre importance ont été enregistrées dans le cas de quatre indices, soit les produits chimiques, dont l'indice est passé de 331.6 (indice rectifié) à 333.2 en août, les produits du fer et du textile dont les indices ont tous deux augmenté de 0.2%, le premier passant de 453.6 à 454.6 et le second de 453.6 (indice rectifié) à 454.6. L'indice des produits du bois a augmenté de 0.1%, passant de 580.7 (indice rectifié) à 581.2, en raison de la hausse des prix du papier d'impression et du papier d'emballage qui a compensé la hausse des prix du bois d'œuvre.

* These indexes are preliminary. Ces indices sont provisoires.

Security Price Indexes (1961=100)

The common stock prices index decreased 3.7% to 150.2 in August. Among the three major groups, industrials decreased 4.0% to 160.1, utilities 1.6% to 118.0 and finance 4.5% to 147.9. Within the thirteen industrial sub-groups, beverages stock prices decline 11.1% to 187.9. As far as utilities are concerned, pipeline stocks decreased 5.1% to 108.0. The decrease in finance index resulted from a 3.9% decline in banks to 177.8 and another one of 6.5% for investments and loans, to 99.8.

During the same period, the index of stock prices in mining increased 1.3% to 143.3 as gold was up to 250.7. This offset the 2.0% loss in base metal (85.7).

As far as the two supplementary indexes are concerned, uranium was up 6.9% to 255.6, while primary oils and gas dropped 3.8% to 302.6.

The preferred stock index was down 4.8% to 59.0 in August from 62.0 in July.

Canadian Farm Products Index (1935-39=100)

The price index of Canadian farm products at terminal markets declined 0.4% to 526.2 in August, from the revised July index of 528.4. The field products index decreased 0.3% to 471.8 from 473.3 on price decreases for potatoes on both markets, for hay and for wheat in the East, and for rye in the West. Higher prices were shown for oats, barley, corn and rye in the East, and for flax and hay in the West.

The animal products declined 0.5% to 580.6 from a revised index of 583.5 reflecting lower prices for lambs, calves and steers on both markets and for cheesemilk in the West. Price increases were shown for hogs and eggs on both markets, and for poultry in the East, and cheesemilk, butter and fluid milk in the West.

Thirty Industrial Materials Price Index (1935-39=100)

The price index of thirty industrial materials, calculated as an unweighted geometric average, moved up 2.8% to 509.9 in August from the revised July index of 495.9. Prices were higher for thirteen commodities, lower for four and unchanged for thirteen. Principal changes included increases for cottonseed oil, raw sugar, hogs, linseed oil, unbleached white pulp, domestic zinc, iron ore, oats, raw rubber, domestic wheat, sisal, tin, and bleached sulphite pulp while decreases were recorded for beef hides, spruce lumber, steers and crude oil.

Indices des cours des valeurs mobilières (1961=100)

L'indice des cours des actions ordinaires a diminué de 3.7% en août, pour s'inscrire à 150.2. Parmi les trois grands groupes, les valeurs industrielles ont enregistré une perte de 4.0% pour s'établir à 160.1, les services publics accusent une baisse de 1.6% pour se fixer à 118.0, et les finances ont perdu 4.5% pour marquer 147.9. Parmi les treize sous-groupes industriels, une baisse de 11.1% est à signaler dans le prix des actions des boissons (187.9). En ce qui concerne les services publics les valeurs du pipe-line ont diminué de 5.1% pour se stabiliser à 108.0. La baisse de l'indice des finances est due aux pertes de 3.9% de l'indice bancaire (177.8) et de 6.5% des valeurs des placements et des prêts (99.8).

Au cours de la même période, l'indice des prix des titres miniers a augmenté de 1.3% pour s'établir à 143.3, à la suite d'une augmentation de 3.5% des aurifères (250.7) qui a annulé la perte de 2.0% subie dans les métaux communs (85.7).

Pour ce qui est des deux indices de prix supplémentaires, on a observé une augmentation de 6.9% dans le cas de l'uranium qui s'est fixé à 255.6, alors que le pétrole et le gaz primaires accusaient une baisse de 3.8% et tombaient à 302.6.

L'indice des actions privilégiées a diminué de 4.8%, passant de 62.0 en juillet à 59.0 en août.

Indice des prix des produits agricoles canadiens (1935-39=100)

L'indice des prix des produits agricoles canadiens sur les marchés terminaux est passé de 528.4 en juillet (indice rectifié) à 526.2 en août, soit une baisse de 0.4%. L'indice des produits de grande culture est passé de 473.3 à 471.8, soit une baisse de 0.4% imputable à une diminution du prix des pommes de terre sur les deux marchés, de celui du foin et du blé dans l'Est, et de celui du seigle dans l'Ouest. Le prix de l'avoine, de l'orge, du maïs et du seigle a augmenté dans l'Est; celui du lin et du foin s'est accru dans l'Ouest.

Les produits d'origine animale ont diminué de 0.5%, passant de 583.5 (indice rectifié) à 580.6, en raison de la baisse du prix de l'agneau, du veau et des bouvillons sur les deux marchés et de celui du lait de fromagerie dans l'Est. Il y a eu une majoration du prix du porc et des oeufs sur les deux marchés, et de celui de la volaille dans l'Est et du lait de fromagerie, des matières grasses et du lait de consommation dans l'Ouest.

Indices des prix de trente matières industrielles (1935-39=100)

L'indice des prix de trente matières industrielles calculé comme moyenne géométrique non pondérée a progressé de 2.8%, passant de 495.9 en juillet (indice rectifié) à 509.9 en août. Les prix de treize produits ont augmenté; ceux de quatre produits ont baissé. Ils sont restés inchangés dans le cas de treize autres. Les principales variations comprennent une hausse du prix de l'huile de graine de coton, du sucre brut, du porc, de l'huile de lin, de la pâte au sulphite non blanchie, du zinc canadien, du minerai de fer, de l'avoine, du caoutchouc brut, du blé canadien, du sisal, de l'étain et de la pâte au sulphite blanchie, tandis que le prix des peaux de boeuf, des sciages d'épinette, des bouvillons et du pétrole brut baissait.

Consumer Price Movements

The Consumer Price Index for Canada (1961 = 100) rose 1.0% to 169.6 in August from 168.0 in July. Though increases were recorded for all major components, most of the latest month's advance was attributable to a 1.4% rise in the Food index and to a 0.9% increase in the Housing component. The Transportation index went up 0.6% and that for Recreation, Education and Reading rose 1.0%. The Health and Personal Care element advanced 1.5%, Clothing prices rose 0.5%, on average, and Tobacco and Alcohol went up 0.8%. In the latest month, the price level for All-Items other than Food rose 0.8%. Between August 1973 and August 1974, the All-Items Index advanced 10.8%.

The Food index advanced 1.4% to 192.8 in August from 190.2 in July as the level of prices for food eaten outside the home rose 1.6% and home-consumed food prices moved up 1.4%, or about one-half the average rate of increase between these two months since 1971. Although most major components in the food-at-home index rose in the latest month, fresh vegetables declined in price more than is usually the case between July and August. The fresh vegetables index dropped 18.4%, mainly due to price decreases of over 30% for potatoes and lettuce and a reduction of more than 10% in the price of tomatoes and cabbage. In contrast, fresh fruit prices rose 3.5%, on average, between July and August to stand over 13% above their level of August 1973. Processed fruit and vegetable prices continued to rise and were retailing approximately 20% higher than a year ago. Between July and August, pork and beef prices moved up 8.8% and 4.2%, respectively, while the poultry index edged down 0.3%. All pork and most beef items surveyed registered advances: hamburger, however, fell in price for the sixth consecutive month to a level some 17% below its peak of last February and 8.5% lower than a year ago. Compared with twelve months earlier, beef and poultry prices were up 7.7% and 3.8%, respectively. The pork index, however, stood 6.5% below its level of a year ago as a result of the progressive decline in pork prices from September to June. Egg prices remained relatively stable in the latest month retailing 1.1% below their level of August 1973. The cereal and bakery products index rose 1.5% between July and August, dairy products, on average, recorded a 0.6% rise, and the fats and oils component edged up 0.1%. Amongst other food items, sugar continued its strong advance, rising 12.6% in the latest month to a level approximately 160% above that of a year earlier. Various sugar-related products such as chocolate bars, jelly powder and jam also registered significant upward movements, and price increases were recorded for beverages and most frozen and convenience food items. Between August 1973 and August 1974, the total Food index moved up 14.3% with the price of food consumed at home rising 13.2% and that for food away from home 20.2%.

The Housing index rose 0.9% to 168.0 in August from 166.5 in July. Within the shelter element, home-ownership costs moved up 1.4% reflecting increases in the indexes for

Mouvements des prix à la consommation

Entre juillet et août 1974, l'indice des prix à la consommation au Canada (1961 = 100) a augmenté de 1.0% pour passer de 168.0 à 169.6. Bien que tous les éléments principaux aient enregistré des hausses, l'essentiel de l'augmentation du mois dernier est attribuable à l'augmentation de 1.4% de l'indice de l'alimentation et à celle de 0.9% de l'élément habitation. L'indice de transports a augmenté de 0.6% et celui des loisirs, formation, lecture de 1.0%. L'élément soins personnels et hygiène a augmenté de 1.5% et celui de l'habillement de 0.5%, en moyenne; enfin l'élément tabacs et alcools a augmenté de 0.8%. Au cours du mois dernier, l'indice d'ensemble, sauf l'indice de l'alimentation, a augmenté de 0.8%. Entre août 1973 et août 1974, l'indice d'ensemble a augmenté de 10.8%.

L'indice de l'alimentation a augmenté de 1.4% entre juillet (190.2) et août (192.8) à cause de l'augmentation de 1.6% du prix des repas consommés à l'extérieur et de celle de 1.4% des aliments consommés à la maison, soit environ la moitié du taux moyen d'augmentation entre les deux mêmes mois depuis 1971. Bien que la plupart des éléments principaux de l'indice des aliments consommés à la maison aient augmenté le mois dernier, le prix de légumes frais a diminué plus que de coutume entre juillet et août. L'indice des légumes frais a baissé de 18.4%, surtout grâce à des diminutions de plus de 30% des prix des pommes de terre et de laitue et à une baisse de plus de 10% du prix des tomates et choux. Par contre, les prix des fruits frais ont augmenté de 3.5% en moyenne, entre juillet et août pour se situer à environ 13% au-dessus du niveau d'août 1973. Les prix des fruits et légumes conserve ont continué d'augmenter et présentaient une augmentation d'environ 20% par rapport à l'année précédente. Entre juillet et août, les prix du porc et du boeuf ont augmenté de 8.8% et 4.2%, respectivement, tandis que l'indice de la volaille diminuait de 0.3%. Toutes les coupes de porc et presque toutes celles de boeuf observées dans l'enquête, ont enregistré des augmentations; cependant, le boeuf haché a baissé pour le 6^e mois consécutif tombant à un niveau de 17% inférieur au maximum atteint en février dernier et de 8.5% inférieur à l'année précédente. Par rapport à l'année précédente, les prix du boeuf et de la volaille ont augmenté de 7.7% et 3.8% respectivement. L'indice du porc, par contre, était de 6.5% inférieur à celui de l'année précédente, à la suite de la baisse progressive des prix entre septembre et juin. Le prix des oeufs est resté relativement stable, le mois dernier, plaçant à 1.1% au-dessous de la cote de l'année précédente. L'indice des céréales et produits de boulangerie a augmenté de 1.5% entre juillet et août; les produits laitiers ont enregistré, en moyenne, une augmentation de 0.6% et l'élément graisses et huiles a augmenté de 0.1%. Parmi les autres éléments de l'alimentation, le sucre continue d'augmenter rapidement, avec une hausse de 12.6% le mois dernier et de 160% par rapport à l'année précédente. Les différents produits contenant du sucre, comme les tablettes de chocolat, la poudre à gelée et la confiture ont également enregistré des augmentations sensibles; on a également observé des hausses du prix des boissons et de la plupart des aliments congelés et préparés. Entre août 1973 et août 1974, l'indice d'ensemble de l'alimentation a augmenté de 14.3%, augmentation répartie entre 13.2% pour les aliments consommés à la maison et 20.2% pour les repas pris à l'extérieur.

L'indice de l'habitation a augmenté de 0.9% pour passer de 166.5 en juillet à 168.0 en août. Dans l'élément logement, les coûts de propriété ont augmenté de 1.4%, à la suite des augmen-

new houses, mortgage interest and repairs; rents edged up 1.3%. Among household operation items, the electricity index moved up in response to markedly higher rates in British Columbia. Higher prices, on average, were also recorded for furniture, floor coverings, linens, dishes and most household supplies. In the latest twelve months, the Housing index rose 1.4%.

The Clothing index rose 0.5% to 153.3 in August from 152.5 in July. This advance was attributable to price increases for most items surveyed, and contrasts with July to August movements of recent years when either declines or marginal increases were recorded. The women's wear component, in advancing 0.8%, was a major contributor to the increase in the overall Clothing index. Significant contributions also came from the children's and men's wear elements which rose 0.8% and 0.3%, respectively. The footwear and piece goods indexes both rose 0.4% as most items surveyed recorded increases. The Clothing index advanced 10.8% in the latest twelve months.

The Transportation index rose 0.6% to 153.3 in August from 152.4 in July. The main contributors to this latest advance were new car prices which rose 0.9% following price increases on some models, and air fares which went up, on average, 6.4% in response to higher charges on domestic and trans-Atlantic routes. Increases were also recorded in taxi fares and automobile insurance rates in some centres. On the other hand, the gasoline index declined 0.4% following reductions in some outlets in a number of cities. In the twelve months to August 1974, the Transportation index rose 1.5%.

The Health and Personal Care index advanced 1.5% to 172.4 in August from 169.9 in July. Over half of this increase was attributable to higher prices for men's haircuts and women's hairdressing in a number of major centres. Other contributors to the rise were personal care supplies which rose 1.4%, on average, and pharmaceuticals which moved up 0.9%. In the latest twelve months, the Health and Personal Care index increased 9.5%.

The Recreation, Education and Reading index moved up 1.0% to 162.0 in August from 160.4 in July. Higher admission prices to football games and movies accounted for over three-quarters of the rise. Among other recreation items, price increases were recorded for camera film and accessories, and for pet food. The Recreation, Education and Reading index stood 10.3% higher than twelve months earlier.

The Tobacco and Alcohol index moved up 0.8% to 145.0 in August from 143.9 in July with most of the increase being attributable to higher prices for home-consumed liquor and wine in Ontario. In the latest twelve months, the Tobacco and Alcohol index rose 6.2%.

tions des indices des prix des maisons neuves, de l'intérêt hypothécaire et des réparations; les loyers ont augmenté de 0.3%. Parmi les éléments des dépenses de ménage, l'indice de l'électricité a connu une hausse à cause des tarifs nettement plus élevés enregistrés en Colombie-Britannique. On a également enregistré des hausses pour les meubles, les revêtements de sol, le linge de maison, la vaisselle et la plupart des fournitures de ménage. Au cours des douze derniers mois, l'indice du logement a augmenté au total de 9.4%.

L'indice de l'habillement a augmenté de 0.5% pour passer de 152.5 en juillet à 153.3 en août. Cette hausse est attribuable à l'augmentation des prix de la plupart des articles d'habillement observés et elle va à l'inverse du mouvement habituel observé entre juillet et août ces dernières années, alors que l'on enregistrait des baisses ou des augmentations marginales. L'élément vêtements pour femmes, qui a augmenté de 0.8%, a principalement contribué à faire monter l'indice global de l'habillement. Ont également contribué à la hausse de l'indice les éléments vêtements pour enfants et vêtements pour hommes, qui ont augmenté respectivement de 0.8% et 0.3%. Les indices des chaussures et des tissus à la verge ont augmenté tous les deux de 0.4%, et la plupart des articles observés dans ce groupe ont enregistré des hausses de prix. L'indice de l'habillement a augmenté de 10.8% au cours des douze derniers mois.

L'indice des transports a augmenté de 0.6% pour passer de 152.4 en juillet à 153.3 en août. Ont surtout contribué à cette hausse les prix des voitures neuves (+ 0.9%), à la suite des augmentations de certains modèles, et les tarifs aériens (+ 6.4% en moyenne) à la suite des augmentations des tarifs à l'intérieur du Canada et pour les voyages transatlantiques. On a également enregistré des augmentations des tarifs de taxi et des primes d'assurance-automobile dans certains centres. Par contre, l'indice du prix de l'essence a diminué de 0.4%, à la suite des baisses de prix enregistrées dans certains points de vente de nombreuses villes. Au cours des douze derniers mois, l'indice global des transports a augmenté de 10.5%.

L'indice des soins personnels et de l'hygiène a augmenté de 1.5% pour passer de 169.9 en juillet à 172.4 en août. Plus de la moitié de cette augmentation est due à la hausse des tarifs des coiffeurs pour hommes et pour dames dans un grand nombre de grands centres. Ont également contribué à cette hausse globale les fournitures de soins personnels qui ont augmenté de 1.4%, en moyenne, et les produits pharmaceutiques, qui ont augmenté de 0.9%. Au cours des douze derniers mois, l'indice des soins personnels et de l'hygiène a augmenté de 9.5%.

L'indice des loisirs, formation et lecture a augmenté de 1.0% pour passer de 160.4 en juillet à 162.0 en août. Plus des trois quarts de cette hausse sont dus à l'augmentation du prix des billets d'entrée au cinéma et aux parties de football. Parmi les autres éléments de loisirs, on a enregistré des augmentations du prix des appareils photographiques et du développement des pellicules, et du prix des aliments pour animaux domestiques. L'indice global des loisirs, formation et lecture a augmenté, au cours des douze derniers mois, de 10.3%.

L'indice des tabacs et alcools a augmenté de 0.8% pour passer de 143.9 en juillet à 145.0 en août; cette hausse est surtout due à l'augmentation en Ontario du prix des alcools et des vins destinés à la consommation à la maison. Au cours des douze derniers mois, l'indice global des tabacs et alcools a augmenté de 6.2%.

Consumer price movements, reclassified by goods and services, offer another view of the incidence of price change. Between July and August, the total goods index advanced 0.9% with the main impetus coming from non-durable goods which rose 1.1% mainly in response to higher prices for food, alcoholic beverages and health and personal care supplies. The indexes for durable goods and for semi-durable goods both rose 0.6%, the former mainly because of higher automobile and furniture prices and the latter largely in response to higher quotations for clothing and household furnishings. A rise of 1.1% was recorded in the services indexes as most service components recorded advances but with the major contributors being the shelter, recreation and transportation elements. In the latest twelve months, the total goods index advanced 12.2% and that for services 8.6%.

Le mouvement des prix à la consommation, reclassés par biens et services, présente un autre aspect de l'incidence des variations de prix. Entre les mois de juillet et août, l'indice global des biens a augmenté de 0.9%, essentiellement à cause des biens non durables dont l'indice a augmenté de 1.1%, à la suite de augmentations enregistrées parmi les éléments aliments, boissons alcooliques, et fournitures de soins personnels et d'hygiène. Les indices des biens durables et semi-durables ont augmenté tous les deux de 0.6%, le premier surtout à cause des prix des voitures, des meubles et le second essentiellement à cause des augmentations des prix des vêtements et des articles ménagers. On a enregistré une augmentation de 1.1% de l'indice des services, à la suite d'une augmentation de presque tous les éléments de cet indice en particulier les éléments logement, loisirs et transports. Au cours des douze derniers mois, l'indice global des biens a augmenté de 12.2% et celui des services de 8.6%.

TABLEAU 1. Récapitulation des indices des prix courants

	Indexes				Percentage changes		
	Indices				Variation proportionnelle		
	Aug. 1974	July 1974	Aug. 1973	July 1973	Aug. 1974	Aug. 1973	Aug.
	août 1974	juill. 1974	août 1973	juill. 1973	août 1974	août 1973	août
<u>Industrial price indexes - Indices des prix dans l'industrie</u>							
Industry selling price index: manufacturing - 1961=100(1) - Indices des prix de vente dans l'industrie: industries manufacturières	175.7	173.1	147.9	143.0	1.5	3.4	1
General wholesale index - (1935-39=100)(2) - L'indice général de gros	469.3	462.7r	402.9	375.3	1.4	7.4	1
Vegetable products - Substances végétales	482.9	463.8r	416.2	351.0	4.1	18.6	1
Animal products - Produits animaux	502.2	497.3r	516.3	455.4	1.0	13.4	-
Textile products - Produits textiles	429.8	428.8	336.1	330.7	0.2	1.6	2
Wood products - Produits du bois	581.2	580.7r	506.3	500.6	0.1	1.1	2
Iron products - Produits du fer	454.6	453.6r	355.5	354.7	0.2	0.2	2
Non-ferrous metals - Métaux non ferreux	428.6	423.2r	341.8	333.1	1.3	2.6	2
Non-metallic minerals - Minéraux non métallique	348.7	342.2r	258.8	253.5	1.9	2.1	3
Chemical products - Produits chimiques	333.2	331.6r	265.2	266.0	0.5	0.3	2
<u>Canadian farm products - (1935-39=100)(3) - Produits agricoles canadiens</u>							
agrícolas canadiens	526.2	528.4r	513.2	399.0	- 0.4	28.6	
Eastern - Total - De l'est	507.1	510.8r	476.8	448.6	- 0.7	6.3	
Western - Total - De l'ouest	545.4	546.1	549.6	349.5	- 0.1	57.3	
Field - Cultures	471.8	473.3	447.3	290.8	- 0.3	53.8	
Animal - Animaux	580.6	583.5r	579.0	507.3	- 0.5	14.1	
<u>Selected price indexes - (2) - Certains indices de prix</u>							
Thirty industrial materials - (1935-39=100) - Trente matériaux industriels	509.9	495.9r	420.3	394.7	2.8	6.5	
Residential building construction materials (1971=100) - Matériaux de construction résidentielle	137.3	138.9	125.3r	124.0	- 1.2	1.0	
Non-residential building materials - (1961=100) - Matériaux de construction non résidentielle	193.5	193.0	159.1r	159.1r	0.3	-	
<u>Consumer price indexes - Canada (1961=100) - Indices des prix à la consommation</u>							
All-items - Indice d'ensemble	169.6	168.0	153.0	151.0	1.0	1.3	
Food - Aliments	192.8	190.2	168.7	163.5	1.4	3.2	
Housing - Habitation	168.0	166.5	153.6	152.8	0.9	0.5	
Clothing - Habillement	153.3	152.5	138.4	138.2	0.5	0.1	
Transportation - Transports	153.3	152.4	138.7	136.7	0.6	1.5	
Health and personal care - Soins personnels et hygiène	172.4	169.9	157.5	156.3	1.5	0.8	
Recreation, education and reading - Loisirs, formation et lecture	162.0	160.4	146.9	146.9	1.0	-	
Tobacco and alcohol - Tabacs et alcools	145.0	143.9	136.5	136.4	0.8	0.1	
<u>Security price indexes - (1961=100) - Indices des cours de valeurs mobilières</u>							
Investors index - Total - Indices des portefeuillistes	150.2	156.0	187.2	184.0	- 3.7	1.7	-
Industrials - Total - Industriels	160.1	166.8	203.3	198.0	- 4.0	2.7	-
Industrial mines - Mines industrielles	105.1	107.4	138.8	134.1	- 2.1	3.5	-
Foods - Aliments	150.7	146.3	149.1	149.4	3.0	0.2	-
Beverages - Boissons	187.9	211.3	259.8	255.1	- 11.1	1.8	-
Textiles and clothing - Textiles et vêtements	155.2	165.4	152.4	140.8	- 6.2	8.2	-
Pulp and paper - Pâte et papier	124.1	125.7	141.3	133.1	- 1.3	6.2	-
Printing and publishing - Impression et édition	318.7	346.1	369.9	374.8	- 7.9	1.3	-
Primary metals - Métaux primaires	122.6	124.1	126.7	122.2	- 1.2	3.7	-
Metal fabricating - Fabrications des métaux	163.8	176.7	215.6	207.4	- 7.3	4.0	-
Non-metallic minerals - Minéraux non métalliques	148.5	156.8	181.0	180.9	- 5.3	0.1	-
Petroleum - Pétrole	224.9	230.6	337.3	329.2	- 2.5	2.5	-
Chemicals - Produits chimiques	130.1	129.8	110.7	103.7	0.2	6.8	-
Construction - Construction	136.0	143.9	153.5	142.0	- 5.5	8.1	-
Retail trade - Commerce de détail	129.5	139.3	154.1	158.6	- 7.0	2.8	-
Utilities - Total - Services publics	118.0	119.9	138.6	143.2	- 1.6	3.2	-
Pipeline - Pipe-line	108.0	113.8	140.7	149.4	- 5.1	5.8	-
Transportation - Transport	256.6	263.2	329.2	338.6	- 2.5	2.8	-
Telephone - Téléphone	86.8	85.5	83.2	84.4	- 1.5	1.4	-
Electric power - Énergie électrique	84.1	85.8	105.8	107.7	- 2.0	1.8	-
Gas distribution - Distribution du gaz	137.2	136.9	147.4	155.1	0.2	5.0	-
Finance - Total - Finances	147.9	154.9	178.2	173.9	- 4.5	2.5	-
Banks - Banques	177.8	185.1	210.8	204.6	- 3.9	3.0	-
Investment and loan - Placements et prêts	99.8	106.7	127.1	126.2	- 6.5	0.7	-
<u>Mining - Actions minières</u>							
Mining index - Total - Indices des prix des titres minières	143.3	141.4	137.1	143.1	1.3	4.2	-
Gold - Or	250.7	242.2	170.3	187.2	3.5	9.0	-
Base metals - Métaux communs	85.7	86.5	120.1	120.2	- 2.0	0.1	-
<u>Supplementary indexes - Indices supplémentaires</u>							
Uranium - L'uranium	255.6	239.0	249.6	242.7	6.9	2.8	-
Primary oils and gas - Pétrole et gaz primaires	302.6	314.6	462.2	426.9	- 3.8	8.3	-

- (1) Gross weighted, including inter-industry shipments. For explanation see page 88. - Indice pondéré brut comprenant les livraisons inter-industrielles. Pour toute explication, voir page 88.
- (2) Indexes for 1973 and 1974 are subject to revision. - Les indices pour 1973 et 1974 sont sujets à révision.
- (3) Year to year percentage change not shown since these indexes are not comparable. Indexes subsequent to July 19 are subject to revision. See notes page 89 for details of Western grain prices. - La variation proportionnelle d'une année à l'autre n'est pas indiquée étant donné que ces indices ne sont pas comparables. Les indices postérieurs à juillet 1973 sont sujets à révision. Voir les renvois de la page 89 pour les prix détaillés des grains de l'ouest.

TABLE 2. INDUSTRY SELLING PRICE INDEXES BY INDUSTRY AND SELECTED COMMODITIES

TABLE 2. INDUSTRY SELLING PRICE INDEXES BY INDUSTRY AND SELECTED COMMODITIES
 TABLEAU 2. INDICE DES PRIX DE VENTE DANS L'INDUSTRIE PAR INDUSTRIE ET PAR CERTAINS PRODUITS

1961 = 100

Industries and selected commodities(1) Industrie et certains produits(1)	Month - Mois												Annual Annuel
	J	F	M	A	M	J	J	A	S	O	N	D	
	1971												
	1972												
	1973												
	1974												
Industry selling price index: manufacturing(7) - Indice de prix de vente dans l'industrie: industries manufactu- rières(7)	1970	119.1	119.4	119.6	119.7	119.6	119.1	118.8	118.5	118.5	118.9	118.8	119.1
	1971	119.4	119.8	120.3	121.2	121.2	121.7	122.3	122.4	122.5	122.6	122.7	121.6
	1972	124.5	125.3	125.9	126.5	126.7	126.9	127.4	127.8	128.5	129.0	129.7	127.4
	1973	133.1	134.6	136.6	138.2	139.5	141.0	143.0	147.9	147.7	148.8	150.2	147.7
	1974	156.8	159.3	162.2	165.5	167.9	169.9	173.1	175.7				

- (1) Indexes for 1972, 1973 and 1974 are subject to revision. - Les indices pour 1972, 1973 et 1974 sont sujets à révision.
- (2) This industry was changed in commodity content, price sample and weights in accordance with significant changes within the industry. Figures are revised from January 1971 to date. - La composition en marchandises, les échantillons de prix et les mesures de poids ont changé dans cette industrie conformément à des changements importants survenus dans l'industrie même. Les chiffres sont révisés de janvier 1971 à aujourd'hui.
- (3) Effective January 1973 changes have been made in the calculation of this index. For details see page 88. - À compter de janvier 1973, on a modifié le calcul de cet indice. Pour plus de détails, voir la page 88. - A
- (4) An extensive revision of the weight and price sample (including the incorporation of goods purchased and resold in same condition as purchased) necessitated by developments in the industry's production pattern since 1961 have resulted in the introduction of new price indexes and a discontinuity in the industry price index. - Une révision approfondie de l'échantillon des pondérations et des prix (y compris l'intégration des biens achetés et revendus sans aucune modification), nécessitée par l'évolution du régime de production de l'industrie depuis 1961, a amené l'adoption de nouveaux indices des prix ainsi qu'une solution de continuité dans l'indice des prix industriels.

	Old Series - Ancienne série	New series Nouvelle série
December - 1970 - Décembre	95.1	92.3
January - 1971 - Janvier	95.1	92.1
Average - 1971 - Moyenne	95.2	91.8

- (5) This series has been revised from January 1969 forward. An expanded list of establishments and commodities has been selected and prices for these have been aggregated to a total industry index using 1971 shipments data. The price quotations are, in general, of an improved quality. Selected commodity data on a 1971 time and weight base, are available on request. - Les chiffres de cette série ont été révisés à partir de janvier 1969. Une liste augmentée des établissements et des produits a été établie, et les prix de ces produits ont été agrégés pour former un indice total de l'activité économique à partir des données sur les livraisons de 1971. De manière générale, le calcul des prix est plus fiable. Les utilisateurs peuvent obtenir sur demande des données sur certains produits utilisant les facteurs de pondération de 1971 et dont la période de référence est 1971.
- (6) Motor gasoline prices are 'List' and may not be a reflection of actual transaction prices. - Les prix de l'essence sont des prix de détail suggérés et peuvent ne pas traduire les prix réels à la transaction.
- (7) Gross weighted, including inter-industry shipments. For explanation see page 88. - Indice pondéré brut comprenant les livraisons inter-industrielles. Pour toute explication voir page 88.

ALL-ITEMS Consumer Price Index Converted to 1949=100 - August 1974 - L'indice des prix à la consommation de tous les éléments converti à 1949=100 - Août 1974 219.1

(1) Indexes prior to May 1973 incorporate 1957 expenditure weights, those for May 1973 forward are based on 1967 expenditures. The revised series is linked to its predecessor at April 1973. For further explanation, see page 92. - Avant mai 1973 les indices étaient calculés à l'aide des pondérations fondées sur les dépenses de 1957; à partir de mai 1973 ils sont calculés à l'aide des pondérations fondées sur les dépenses de 1967. Les séries révisées sont raccordées aux précédentes en avril 1973. Pour plus de renseignements, voir page 92.

TABLE 9. Consumer Price Indexes for Canada - Main Groups and Selected Components and Items(1)

TABLEAU 9. Indices des prix à la consommation, Canada - Groupes principaux, éléments et articles choisis(1)

1961=100

	Aug. 1974 Août	July 1974 Juill.	Aug. 1973 Août	July 1973 Juill.	1973	1972	1971
All-items - Indice d'ensemble	169.6	168.0	153.0	151.0	150.4	139.8	133.4
Food - Aliments	192.8	190.2	168.7	163.4	152.0	141.4	131.4
Food for home consumption - Aliments consommés à la maison	187.1	184.6	165.3	160.2	157.9	137.5	127.4

Shelter services - Habitation	184.1	182.4	170.8	170.1	169.0	157.9	149.7
Household utilities - Services publics aux ménages	140.5	138.6	131.1	130.5	130.8	122.3	119.6
Domestic services - Services aux ménages	232.5	229.9	200.0	197.3	196.6	183.8	170.8
Health, personal care, and clothing services - Hygiène, soins personnels et services vestimentaires	197.9	195.7	175.0	173.3	173.3	161.9	152.7
Recreation, education, and communication services - Loisirs, formation et communications	160.5	158.0	151.6	151.6	151.2	144.7	137.9
Transportation services - Transports	199.4	197.3	181.8	178.3	179.2	174.8	168.1

(1) Indexes prior to May 1973 incorporate 1957 expenditures weights, those for May 1973 forward are based on 1967 expenditures. The revised series is linked to its predecessor at April 1973. For further explanation see page 92. - Avant mai 1973 les indices étaient calculés à l'aide des pondérations fondées sur les dépenses de 1957; à partir de mai 1973 ils sont calculés à l'aide des pondérations fondées sur les dépenses de 1967. Les séries révisées sont raccordées aux précédentes en avril 1973. Pour plus de renseignements, voir page 92.

(2) Excludes accessories and notions. - Ne comprend pas les accessoires et menus articles.

(3) Includes clothing accessories and notions. - Comprend les accessoires et menus articles vestimentaires.

(4) Includes constant weighted food component. - Comprend l'élément aliments calculé à l'aide de pondérations constantes.

TABLE 11. Consumer Price Indexes, Regional Cities(1)

TABLEAU 11. Indices des prix à la consommation, agglomérations urbaines(1)

1961=100

Note: (i) These indexes measure within each city the percentage change in consumer prices from the base period to the subsequent time periods. They cannot be used to compare levels of prices between cities. (ii) For inter-city indexes of retail price differentials refer to Table 14. - Nota: (i) Les indices mesurent dans chaque ville le pourcentage de variation des prix à la consommation depuis la période de base jusqu'à des périodes subséquentes. Ils ne peuvent servir à comparer les niveaux des prix d'une ville à l'autre. (ii) Pour les indices comparatifs des prix de détail, se reporter au Tableau 14.

(1) Indexes prior to May 1973 incorporate 1957 expenditure weights, those for May 1973 forward are based on 1967 expenditure. The revised series is linked to its predecessor at April 1973. For further explanation, see page 92. - Avant mai 1973 les indices étaient calculés à l'aide des pondérations fondées sur les dépenses de 1957; à partir de mai 1973 ils sont calculés à l'aide des pondérations fondées sur les dépenses de 1967. Les séries révisées sont raccordées aux précédentes en avril 1973. Pour plus de renseignements, voir page 92.

(2) Until April 1973, the shelter element of regional cities' housing indexes moved on the basis of changes in rents only. However, from May 1973 on, homeownership has been included in the shelter element of regional cities' housing indexes, so that the Canada and regional city shelter indexes now contain the same elements. See also page 93. - Jusqu'en avril 1973, l'élément logement des indices de l'habitation des agglomérations urbaines était basé uniquement sur les variations des loyers. Toutefois, depuis mai 1973, les frais de possession d'une maison ont été incorporés à l'élément logement des indices de l'habitation des agglomérations urbaines; il en résulte que les indices du logement pour le Canada et pour les agglomérations urbaines comportent maintenant les mêmes éléments. Voir aussi la page 93.

(3) Includes shelter and household operation. Until April 1973, the shelter element of regional cities' housing indexes moved on the basis of changes in rents only. However, from May 1973 on, homeownership has been included in the shelter element of regional cities' housing indexes, so that the Canada and regional city shelter indexes now contain the same elements. See also page 93. - Comprend le logement et l'entretien du ménage. Jusqu'en avril 1973, l'élément logement des indices de l'habitation des agglomérations urbaines était basé uniquement sur les variations des loyers. Toutefois, depuis mai 1973, les frais de possession d'une maison ont été incorporés à l'élément logement des indices de l'habitation des agglomérations urbaines; il en résulte que les indices du logement pour le Canada et pour les agglomérations urbaines comportent maintenant les mêmes éléments. Voir aussi la page 93.

(1) Indexes prior to May 1973 incorporate 1964 expenditure weights, those for May 1973 forward are based on 1967 expenditures. The revised series is linked to its predecessor at April 1973. For further explanation, see page 92. - Avant mai 1973 les indices étaient calculés à l'aide des pondérations fondées sur les dépenses de 1964; à partir de mai 1973 ils sont calculés à l'aide des pondérations fondées sur les dépenses de 1967. Les séries révisées sont raccordées aux précédentes en avril 1973. Pour plus de renseignements, voir page 92.

(2) Includes shelter and household operation. Until April 1973, the shelter element of regional cities housing indexes moved on the basis of changes in rents only. However, from May 1973 on, homeownership has been included in the shelter element of regional cities' housing indexes, so that the Canada and regional city shelter indexes now contain the same elements. See also page 93. - Comprend le logement et l'entretien du ménage. Jusqu'en avril 1973, l'élément logement des indices de l'habitation des agglomérations urbaines était basé uniquement sur les variations des loyers. Toutefois, depuis mai 1973, les frais de possession d'une maison ont été incorporés à l'élément logement des indices de l'habitation des agglomérations urbaines; il en résulte que les indices du logement pour le Canada et pour les agglomérations urbaines comportent maintenant les mêmes éléments. Voir aussi la page 93.

(1) Indexes for 1974 are subject to revision. Les indices pour 1974 sont sujets à révision.

(2) The Canada Index is the weighted average of the General Contractors and the Sub-trade Contractors Indexes as well as being the weighted average of the regional indexes. — L'indice pour le Canada est la moyenne pondérée des indices des entrepreneurs généraux et sous-traitants. Il correspond également à la moyenne pondérée des indices régionaux.

- (1) Indexes for 1974 are subject to revision. - Les indices pour 1974 sont sujets à révision.
- (2) From Table 18. For explanation of recent revisions see Vol 1, No. 7 of Construction Price Statistics, Service Bureau 62-006. - Du Tableau 18. Pour une explication des récentes révisions voir Vol 1, No. 7 du bulletin de service "Statistique des prix dans la construction" 62-006.
- (3) National Income and Expenditure Accounts, Catalogue 13-001, quarterly. - (No. 13-001 au catalogue, trimestriel).
- (4) Indexes for 1973 and 1974 are subject to revision. - Les indices pour 1973 et 1974 sont sujets à révision.
- (5) From Table 19. For explanation of recent revisions see Vol 1, No. 10 of Construction Price Statistics, Service Bureau 62-006. - Du Tableau 19. Pour une explication des récentes révisions voir Vol 1, No. 10 du bulletin de service "Statistique des prix dans la construction" 62-006.
- (6) This series contains an engineering component as well as a building component, and is therefore not precisely comparable in coverage with the non-residential composite index. The implicit price indexes are adjusted for changes in cost of profit and productivity. - Cette série comprend une composante génie aussi bien qu'une composante construction: elle n'a donc pas tout à fait la même portée que l'indice synthétique pour la construction non-résidentielle. Les indices synthétiques sont corrigés des variations des profits et de la productivité des entrepreneurs.

- (1) To assist comparison with other published series the indexes presented have been arithmetically converted from 1956=100 to 1961=100. The 1956=100 indexes are available on request. - Pour faciliter la comparaison avec d'autres séries publiées, ces indices ont été recalculés sur la base 1961=100. Les indices originaux (1956=100) sont disponibles.
- (2) The years refer to fiscal years. Thus 1961 refers to the period April 1, 1961 to March 31, 1962. - Années financières; par exemple, 1961 couvre la période du 1er avril 1961 au 31 mars 1962.
- (3) Major components for the provincial indexes are presented annually in *Construction Price Statistics*, Service Bulletin No. 62-006. - Les principaux éléments des indices pour les provinces sont publiés annuellement dans le bulletin de service, *Statistiques des Prix dans la Construction*, no 62-006.
- (4) Direct comparisons should not be made between this index and the highway index published by the Ontario Department of Transportation & Communications. The item content of the indexes is different. - On ne peut comparer directement cet indice avec celui de la voirie publié par le Département du transport et des communications de l'Ontario. Les éléments des deux indices sont différents.

Explanation of Methods Used and Additional Sources for Price Series

Industrial Price Indexes

Industry Selling Price Indexes (1961 = 100)

Industry selling price indexes are published for approximately 100 industries within manufacturing. Also published are approximately 425 commodity price indexes for the products of these industries. The Classification system is that of the 1960 standard industrial classification, thus permitting the joint use of price statistics with other data such as production and employment similarly classified.

The data upon which both the initial selection of commodities to be priced and responding firms are made are contained in the Census of Manufacturers, a series of annual surveys collecting statistics on shipments of commodities, employment and materials used. Prices are collected on the 15th of each month or the nearest transaction date for the commodity being priced; sales and excise taxes are excluded.

The industry classified price indexes are useful for analysis of price movements, for estimation of the constant dollar value of shipments, and for purposes of contract escalations.

A complete description of these indexes is contained in: Industry Selling Price Indexes 1956-68, Catalogue No. 62-528.

Industry Selling Price Index: Manufacturing

The index is gross weighted. It measures the movements of prices of gross shipments of manufacturing industries, including inter-industry shipments between individual industries within manufacturing. Therefore, it duplicates the movements of some prices in the sense that, for example, flour prices are given full weight as part of the shipments of the Flour Mills Industry and then are implicitly counted again through full weighting of the shipment prices of those manufacturing industries which use flour as an ingredient in their outputs, e.g., bread, biscuits, cakes, etc.

"Iron & Steel Mills:" 12-2910

The principal change in the index is as follows: From January 1973 forward prices collected from the various companies are, for any given commodity, weighted together in a way that reflects the relative importance of each company's shipments of the commodity to the total shipments of that commodity by all companies in the year 1971. In addition prices for stainless products were deleted from the series bars hot rolled etc. (12-2910-082), in September 1972 and from the series sheets and strip cold rolled etc. (12-2910-084) in October 1972. Prices for stainless products, however, are included in the price index for the iron and steel mills industry.

The concept of price change measured is net return to mill.

Explication des méthodes utilisées et sources supplémentaires des séries de prix

Indices des prix industriels

Indices des prix de vente dans l'industrie (1961 = 100)

Les indices des prix de vente dans l'industrie sont publiés pour environ 100 industries manufacturières. Près de 425 indices des prix des produits de ces industries sont également publiés. Les produits sont classés d'après la Classification type des industries de 1960, ce qui permet d'utiliser la statistique des prix avec d'autres données telles que la production et l'emploi classées de la même manière.

Les données sur lesquelles se fonde le choix initial de produits dont il faut déterminer le prix et des établissements enquêtés figurent dans le "recensement des manufactures", série de bulletins sur les enquêtes annuelles au cours desquelles on recueille des statistiques sur les expéditions de produits, sur l'emploi et sur les matières utilisées. La collecte des prix a lieu le 15 de chaque mois ou à la date de transaction la plus rapprochée pour le produit en question; les taxes de vente et droits d'accise ne sont pas pris en compte.

Les indices des prix classés par industrie servent à analyser les mouvements de prix, à estimer la valeur des expéditions en dollars constants et à indexer les contrats.

La description complète de ces indices est donnée dans "Indices des prix de vente dans l'industrie, 1956-68", numéros 62-528 au catalogue.

Indices des prix de vente dans l'industrie: Industries manufacturières

Il s'agit d'un indice pondéré brut. Il mesure les mouvements du prix des livraisons brutes des industries manufacturières y compris les livraisons inter-industrielles des industries manufacturières. Il prend donc deux fois en compte les mouvements de certains prix: les prix de la farine, par exemple, font l'objet d'une pondération complète comme ayant trait aux livraisons de meuneries et ils sont comptés à nouveau implicitement du fait de la pondération complète des prix de livraisons des industries manufacturières qui utilisent de la farine comme ingrédient de leurs produits, tels que le pain, les biscuits ou les gâteaux.

"Sidérurgie:" 12-2910

Le principal changement apporté à l'indice est le suivant: depuis janvier 1973, les prix recueillis auprès des différentes sociétés sont, pour tout produit, pondérés de manière à refléter l'importance relative des livraisons de chaque société par rapport aux livraisons totales de ce produit par toutes les sociétés en 1971. En outre, les prix des produits en acier inoxydable ont été enlevés de la série "barres, laminés à chaud, etc." (12-2910-082) en septembre 1972 et de la série "tôles et feuillards, laminés à froid, etc." (12-2910-084) en octobre 1972. Ils sont toutefois compris dans l'indice des prix de l'industrie de la sidérurgie.

Le concept de la mesure de la variation des prix se fonde sur le revenu net à l'usine.

Purchase Price Indexes of Secondary Metals (1969=100)

Ferrous and non-ferrous indexes are compiled from a series of input prices, inclusive of transportation and brokerage fees, submitted by a wide variety of purchasers from selected industries. Indexes for certain categories of metals cannot be published because of the confidentiality of the data under the Statistics Act.

Canadian Farm Products Price Index (1935-39=100)

Prices of Western grains used in the index are Canadian Wheat Board buying prices for the grades listed below. Initial payments are first used in the index calculation and are revised as further payments are announced.

Final payments for the crop year August 1972 - July 1973 were announced on November 6, 1973 for wheat, oats and barley. The estimates of Final payments for the 1973-74 crop year are based on wheat Board predictions of April 1974.

Indices du prix d'achat des métaux de deuxième fusion (1969=100)

L'indice des métaux ferreux et non ferreux est établi à partir d'une série de prix comprenant les frais de transport et de dédouanement; ces données sont fournies par un large éventail de clients de certaines industries. Confidentiels en vertu de la Loi sur la statistique, les indices de certaines catégories de métaux ne peuvent être publiés.

Indice des prix des produits agricoles canadiens (1935-39=100)

Les prix des céréales de l'Ouest figurant dans l'indice représentent les prix à l'acheteur de la Commission canadienne du blé pour les catégories énumérées ci dessous. Les paiements initiaux servent d'abord au calcul de l'indice et sont ensuite révisés lorsque d'autres paiements sont annoncés.

Les prix définitifs pour la campagne allant d'août 1972 à juillet 1973 ont été annoncés le 6 novembre 1973, en ce qui concerne le blé, l'avoine et l'orge. Les estimations des paiements totaux pour la campagne agricole 1973-74 sont fondées sur les prévisions d'avril 1974 de la Commission canadienne du blé.

Used in original indexes from Aug. 1972 to July 1973. — Utilisé dans les premiers indices d'août 1972 jusqu'en juillet 1973.
Incorporated retroactively in revised final indexes Aug. 1972 to July 1973. — Inclus retroactivement dans les indices finals révisés d'août 1972 à juillet 1973.
Used in current indexes. — Utilisé dans les indices courants.

General Wholesale Index (1935-39 = 100)

The General Wholesale Index is a commodity classified index of prices. The index is "general" inasmuch as it incorporates a diverse selection of both primary and processed commodities. It is called "wholesale" because its ingredient prices relate to that broad and heterogeneous area of commodity distribution which excludes only retail trade. In fact, the term "wholesale" has more of a connotation of bulk trading than of any homogeneous level of distribution. Thus, though the index mainly includes prices of producers, it also covers transactions of "middle men" who trade in commodities of a type or in quantities characteristic of primary marketing functions.

Though general wholesale price indexes have been calculated by many countries for years there is no precise answer to the question of what such an index measures. This is so because the index cannot be associated with any adequately definable value aggregate. Unlike a consumer price index which can be identified with expenditures of household consumers, a general wholesale index covers a host of overlapping transactions sometimes involving the same ingredient in as many as three different stages of processing. Yet, conceptually, it is not a measure of the purchasing power of money because it omits significant areas of monetary transactions such as prices of land, labour, securities and services, except in so far as prices of these things are implicit in commodity prices. As a conventional summary figure, its use has tended towards a reference level against which to observe the behaviour of particular price groups such as farm products, industrial materials, building materials and the various other groupings for which indexes are published. And as an indicator of general business conditions it is usually included in the group which is regarded as approximately coincident with the business cycle. However, its main attribute now lies in its long historical continuity.

For further details about the General Wholesale Index please consult: *Wholesale Price Indexes 1913-50* (Reference Paper No. 24) *Prices and Price Indexes 1949-52* (Vol. 23) (Catalogue No. 62-501).

Thirty Industrial Materials, (1935-39 = 100)

The price index of thirty industrial materials is calculated as an unweighted geometric average of prices of the selected commodities. The formula is as follows:

$$\sqrt[30]{\frac{P^1}{t \ 35-39} \times \frac{P^2}{t \ 35-39} \times \frac{P^3}{t \ 35-39} \times \dots \times \frac{P^{30}}{t \ 35-39}}$$

Indice général des prix de gros (1935-39 = 100)

L'indice général des prix de gros est un indice des prix classés par produit. Cet indice est "général" du fait qu'il comprend une variété de produits primaires et de produits transformés. Il est appelé "de gros" parce que les prix qui le composent se rapportent au domaine vaste et hétérogène de la distribution des produits dont seul le commerce de détail est exclu. En réalité, l'expression "de gros" fait penser plus au commerce de gros qu'à un niveau homogène de distribution. Bien que l'indice comprenne surtout les prix établis par les producteurs, il englobe également les transactions des "intermédiaires" qui vendent des produits dont le genre et la qualité sont particuliers aux fonctions premières de la commercialisation.

De nombreux pays calculent l'indice général des prix de gros depuis des années; il n'en reste pas moins impossible de dire exactement ce que cet indice mesure, car on ne peut l'associer à une valeur globale que l'on puisse définir exactement. Contrairement à l'indice des prix à la consommation que l'on peut identifier grâce aux dépenses des ménages, l'indice général des prix de gros couvre une foule de transactions à double emploi impliquant parfois le même élément considéré jusqu'à trois étapes différentes de la transformation. Cependant, du point de vue conceptuel, cet indice ne constitue pas une mesure du pouvoir d'achat du dollar parce qu'il ne tient pas compte de transactions monétaires aussi importantes que le prix du terrain, du travail, des valeurs mobilières et des services, sauf si elles sont comprises dans le prix de produits. En tant que chiffre représentatif classique, on a eu tendance à s'en servir pour comparer le comportement de certains groupes de prix, par exemple, celui des produits agricoles, des matières industrielles, des matériaux de construction et de divers autres groupes pour lesquels on publie des indices. Comme indicateur de la situation générale du commerce, l'indice est habituellement intégré au groupe dont on considère qu'il correspond le plus exactement au cycle commercial. Sa qualité principale réside cependant dans sa longue continuité chronologique.

Pour plus de détails sur l'indice général des prix de gros consulter *Wholesale Price Indexes 1913-50* (Reference Paper No. 24) et *Prices and Price Indexes 1949-52* (Vol. 23) (no 62-501 a catalogue).

Indice des prix de trente matières industrielles (1935-39 = 100)

L'Indice des prix de trente matières industrielles est calculé comme moyenne géométrique non pondérée des prix de certaines marchandises. La formule est la suivante:

$$\sqrt[30]{\frac{P^1}{t \ 35-39} \times \frac{P^2}{t \ 35-39} \times \frac{P^3}{t \ 35-39} \times \dots \times \frac{P^{30}}{t \ 35-39}}$$

The selection of materials for pricing relates to groups such as "stable" prices, numbering 12, food prices, numbering 5 and "sensitive" prices, numbering 13. We plan to construct an index of industrial prices that will relate to current usage of materials and that will be of the more traditional Laspeyre's type in its construction. The presently published index contains prices for some materials that no longer constitute important industrial inputs.

The Consumer Price Index for Canada (1961 = 100)

The Consumer Price Index measures the percentage change through time in the cost of purchasing a constant basket of goods and services representing the purchases by a particular population group in a specified time period. The basket is an unchanging or equivalent quantity and quality of goods and services, consisting of items for which there are continually measurable market prices over time.

The index relates to a broad but specific group of urban families and reflects the price changes experienced by that "target group". The index may not represent closely the experience of any one specific family within the group, nor would it be expected to reflect price change for other population groups for which income, family size and place of residence are characteristically different. The target group to which the current index relates is composed of families (a) living in cities with over 30,000 population, (b) ranging in size from two to six persons and (c) with annual incomes in 1967 ranging from \$4,000 to \$12,000. To measure the influences of price change on the cost of goods and services purchased by such families, the Consumer Price Index reflects movements of some 300 items.

The history of consumer price indexes in Canada extends back to the early 1900's and encompasses periodic revisions of index base reference periods and weighting patterns. In January 1969, the time base was updated to 1961=100 from 1949=100; details are contained in the January 1969 issue of the monthly publication *Prices and Price Indexes*, Catalogue 62-002.

From March 1961 to April 1973 inclusive, the weights and relative importance of the items in the Consumer Price Index were based on 1957 family expenditure patterns; details of these weights can be found in *The Consumer Price Index for Canada (1949=100) (Revision Based on 1957 Expenditures)*, Catalogue 62-518. A subsequent weight revision to reflect 1967 family expenditure patterns (and within the food component, 1969 detailed spending habits) was introduced in May 1973. Full details of the latest weighting pattern and other background information on the Consumer Price Index is available in the occasional paper *The Consumer Price Index for Canada (1961=100) (Revision Based on 1967 Expenditures)*, Catalogue 62-539.

Le choix des matières servant au prélèvement des prix et se rapportant à des groupes tels que prix "stables", (12 matières), prix des aliments (5 matières) et prix "variables" (13 matières). Nous projetons d'établir un indice des prix industriels qui se rapportera à l'utilisation courante des matières et dont la structure se rapprochera plus du type Laspeyres plus traditionnel. L'indice publié ici renferme les prix de certaines matières qui ne sont plus considérées comme intrants importants dans l'industrie.

L'indice des prix à la consommation pour le Canada (1961 = 100)

L'indice des prix à la consommation mesure le taux de variation dans le temps du coût à l'achat d'un "panier" constant de biens et de services représentant les achats d'un groupe déterminé de la population au cours d'une période donnée. Le "panier" est constitué par des biens et des services en quantité et de qualité constantes; il comprend uniquement les biens et services qui ont un prix et dont les prix peuvent être observés de façon continue.

L'indice se rapporte à un groupe vaste, mais délimité, de familles urbaines et rend compte des changements de prix auxquels ce "groupe cible" doit faire face. L'indice peut ne pas suivre de près les changements de prix touchant une famille en particulier de ce groupe, pas plus que les changements de prix touchant d'autres groupes de la population dont le revenu, la taille des familles ou les lieux de résidence diffèrent sensiblement. Le groupe cible auquel se rapporte l'indice actuel se compose de familles a) vivant dans des villes de plus de 30,000 habitants, b) dont la taille est comprise entre deux et six personnes, et c) dont les revenus annuels en 1967 étaient compris entre \$4,000 et \$12,000. Afin de mesurer les effets de changements de prix sur le coût des biens et des services achetés par ces familles, l'indice des prix à la consommation suit les mouvements de quelque 300 articles.

L'histoire des indices de prix à la consommation au Canada remonte au début des années 1900, et elle comprend des révisions périodiques des périodes de référence de base de l'indice ainsi que des schémas de pondération. En janvier 1969, on a aligné la base de temps de 1949=100 à 1961=100; d'autres renseignements figurent dans l'édition de janvier 1969 de la publication mensuelle *Prix et indices des prix* (numéro 62-002 au catalogue).

De mars 1961 à avril 1973 inclusivement, les poids, ou l'importance relative des éléments de l'indice des prix à la consommation étaient basés sur les tendances de dépense des familles pour 1957; on peut trouver le détail de ces poids dans la publication *The Consumer Price Index for Canada (1949=100) (Revision based on 1957 Expenditure)*, numéro 62-518 au catalogue. En mai 1973, on a introduit une nouvelle révision des poids afin de prendre en compte les tendances de consommation des familles en 1967 (et, dans l'élément aliments, les habitudes détaillées de dépense en 1969). Le détail complet du dernier schéma de pondération et d'autres renseignements fondamentaux sur l'indice des prix à la consommation figurent dans la publication hors série *L'indice des prix à la consommation du Canada (1961=100) (Révision fondée sur les dépenses de 1967)*, numéro 62-539 au catalogue.

The Consumer Price Index for Canada Reclassified by Goods and Services

A revised supplementary classification system, entitled "The Consumer Price Index Reclassified by Goods and Services", was introduced in May 1973 with the revision of the weighting pattern of the Consumer Price Index to reflect 1967 expenditures.

This supplementary classification introduces an improved framework for regrouping the items which comprise the Index. In it, all items in the C.P.I. have been reclassified into two major categories — goods and services — according to their most characteristic or dominant attribute. The goods component has been sub-divided into three categories: durable, semi-durable, and non-durable goods, according to expected average useful lifetime criteria. Services, on the other hand, have been sub-divided according to broad functional categories.

Historical series conforming to the revised classification system replace the previously published supplementary indexes and are available, with explanatory notes, for the period January 1961 to April 1973 inclusive, in *Retail Prices and Living Costs Service Bulletin*, Catalogue 62-005, Vol. 2 No. 7.

Consumer Price Indexes for Regional Cities (1961 = 100)

Consumer Price Indexes for Regional Cities are published monthly in this bulletin (Table 11). Except for their individual weighting systems, and the fact that they are based on fewer quotations, the regional city indexes are generally similar in concept and item coverage to the Consumer Price Index for Canada.

Prior to May 1973, the city indexes may have underestimated the degree of price movements occurring because the shelter component of the city indexes moved on the basis of changes in rents only, whereas changes in both rents and homeownership costs were, and continue to be, included in the Canada index. As a result of homeownership costs having increased more rapidly than rents, the housing and the all-items indexes for cities tended to underestimate somewhat the rates of price increase particularly over longer periods. From May 1973 forward, however, homeownership costs are included in the regional city consumer price indexes so that the Canada and the regional city indexes are consistent in terms of their content and treatment.

Each city index is designed to measure the influence of changes in retail prices taking place in the locality specified, upon the cost of a fixed basket of goods and services representing the level of consumption of a representative group of families in the particular area specified.

In using the city indexes, it should be remembered that *they do not in any way indicate whether price levels are higher or lower in one city than in another*. Rather, they measure, *within each city*, the percentage change in consumer prices from the base period to subsequent time periods.

L'indice des prix à la consommation au Canada reclassé par biens et services

Un système révisé de classification supplémentaire, intitulé "L'indice des prix à la consommation au Canada reclassé par biens et services", a été introduit en mai 1973 en même temps que la révision des schémas de pondération de l'indice des prix à la consommation afin de rendre compte des dépenses de 1967.

Cette classification supplémentaire regroupe dans un cadre amélioré les éléments de l'indice. En effet, tous les éléments de l'I.P.C. ont été reclassés dans deux grandes catégories, soit la catégorie des biens et celle des services, suivant leur caractère le plus distinctif ou dominant. La catégorie des biens présente trois sous-catégories (biens durables, biens semi-durables, biens non durables) déterminées en fonction de la vie utile moyenne prévisible. D'autre part, on a réparti les services suivant quelques grandes catégories fonctionnelles.

Les séries historiques conformes au système révisé de classification remplacent les indices supplémentaires publiés auparavant, et on peut les trouver, avec des notes explicatives, pour la période janvier 1961-avril 1973, dans la publication "Prix de détail et coût de la vie" - Bulletin de service, numéro 62-005 au catalogue, vol. 2 no 7.

Indices des prix de la consommation dans certaines agglomérations urbaines (1961 = 100)

Ces indices sont publiés tous les mois dans la présente publication (Tableau 11). A l'exception de leurs systèmes de pondération particuliers, et de ce qu'ils font appel à moins de prix, ces indices sont en général semblables par leur concept et par les éléments qui les composent à l'indice des prix à la consommation au Canada.

Avant mai 1973, les indices des agglomérations ont pu sous-estimer le degré de changement des prix, parce que l'élément logement des indices des agglomérations ne variait qu'en fonction de l'évolution des loyers, tandis que l'indice pour le Canada ne comprenait et ne comprend toujours que les changements de loyers et les coûts de propriété. Comme les coûts de propriété ont augmenté plus vite que les loyers, les indices du logement et l'ensemble pour les villes tendent à sous-estimer quelque peu le taux de croissance des prix, principalement sur des périodes plus longues. À partir de mai 1973, cependant, les coûts de propriété sont inclus dans les indices de prix à la consommation de agglomérations urbaines, de sorte que les indices pour le Canada et les agglomérations urbaines sont homogènes à la fois pour ce qui est de leur contenu et de leur traitement.

Chaque indice de ville est conçu de manière à mesurer l'effet des changements des prix de détail dans la ville en question sur les prix d'un panier constant de biens et de services représentant le niveau de consommation d'un groupe représentatif de familles dans cette ville.

Le lecteur devra toujours garder en mémoire que ces indices *n'indiquent en aucune façon si les prix sont plus élevés dans une ville que dans une autre*. Ils mesurent plutôt *dans chaque ville* le taux de variation des prix à la consommation à partir de la période de base et des périodes subséquentes.

For comparisons of retail price differentials between cities, see Table 14 of this publication and the relevant explanatory notes.

Purchasing Power of the 1961 Consumer Dollar

As consumer prices rise, the sum of money required to purchase an unchanging or equivalent quantity and quality of goods and services increases, and the amount of these items that can be purchased with a fixed sum of money decreases. Conversely, as prices fall, the amount of goods and services that can be purchased with a fixed sum of money increases. Thus, rising prices are associated with declining purchasing power of money and falling prices are associated with its increasing purchasing power.

The purchasing power of the consumer dollar, in other words, bears an inverse relationship to the movement of the Consumer Price Index. For example, by January 1973, compared with their average level in 1961, consumer prices as measured by the C.P.I. were 44.5% higher, so that an equivalent basket of goods and services which could be purchased for \$100.00 in 1961 would cost the consumer \$144.50 in January 1973. Each consumer dollar in January 1973, therefore, buys less than in 1961, and the amount of its reduced value can be expressed in terms of the inverse consumer price movement. Thus, in January 1973 the purchasing power of the 1961 consumer dollar declined to approximately 69 cents ($\$1.00 \times 100.0/144.5 = \0.69).

Users of the tabulation which shows the purchasing power of the 1961 consumer dollar at different points in time (Table 12) should note that, as in the case of the Consumer Price Index from which it is derived, it may not represent closely the experience of any one specific family within the large group to which the C.P.I. relates; nor should it be expected to reflect the experience of other population groups whose income, family size and place of residence are characteristically different. It should also be noted that, like the C.P.I., it is not directly affected by changes in income tax, unemployment insurance premiums and certain other security payments.

Measuring the Purchasing Power of Wages

Changing consumer price levels affect the amounts of consumer goods and services which a dollar will buy, and average wages, insofar as they are spent on such items will, of course, be affected in the same way. A wage measurement which takes the change of consumer prices into account, can be calculated by reducing actual average wages by the percentage rise in consumer price levels, or increasing them if the amount price levels fall. Wages thus adjusted may be used to indicate the comparative purchasing power of average earnings if consumer price levels and consumption patterns had remained constant. The following illustration shows how this kind of an adjustment can be made.

Suppose that a series of average weekly wages rises from \$80.00 in week A to \$100.00 in week B, and that in the same interval a consumer price index advances from 100 to 110.0. Because of the 10% rise in consumer prices, \$1.00 will not buy as much in week B as it would in week A. On the

Pour étudier les différences de prix de détail entre les villes, il faut consulter le tableau 14 de la présente publication et les notes explicatives qui l'accompagnent.

Pouvoir d'achat du dollar de consommation 1961

À mesure que les prix à la consommation montent, la somme nécessaire à l'achat d'une quantité et d'une qualité constantes ou équivalentes de biens et de services augmente, et la quantité de ces articles qui peut être achetée avec une somme d'argent fixe diminue. Inversement, à mesure que les prix baissent, la quantité de biens et de services qui peut être achetée avec une somme d'argent constante augmente. Ainsi, la hausse des prix est liée à la baisse du pouvoir d'achat de la monnaie, et la baisse des prix est liée à la hausse du pouvoir d'achat.

Le pouvoir d'achat du dollar de consommation, en d'autres termes, évolue en raison inverse du mouvement de l'indice des prix à la consommation. Ainsi, en janvier 1973, par rapport au niveau de 1961, les prix à la consommation mesurés par l'I.P.C. avaient progressé de 44.5%, de sorte qu'un panier équivalent de biens et de services qui coûtait \$100 à l'achat en 1961 aurait coûté \$144.50 en janvier 1973 au consommateur. Par conséquent, chaque dollar de consommation en janvier 1973 achète moins qu'en 1961, et l'on peut exprimer le montant de sa valeur réduite en fonction de l'inverse du mouvement des prix à la consommation. Ainsi, en janvier 1973, le pouvoir d'achat du dollar de consommation 1961 était tombé approximativement à 69 cents ($\$1.00 \times 100.0/144.5 = \0.69).

Les utilisateurs du tableau qui indique le pouvoir d'achat du dollar de consommation de 1961 à différentes périodes (tableau 12) doivent noter que, comme dans le cas de l'indice des prix à la consommation dont il a été tiré, il peut ne pas suivre de près le cas d'une famille en particulier faisant partie du grand groupe auquel se rapporte l'I.P.C., pas plus qu'il ne rend nécessairement compte des dépenses d'autres groupes de la population dont les revenus, la taille des familles et les lieux de résidence diffèrent sensiblement. Il faut également noter que, tout comme l'I.P.C., il n'est pas touché directement par les changements de l'impôt sur le revenu, les primes d'assurance-chômage et certains autres paiements d'assistance.

Mesure du pouvoir d'achat des salaires

Les changements du niveau des prix à la consommation affectent les quantités de biens et de services de consommation qu'un dollar peut acheter, et les salaires moyens, dans la mesure où ils sont consacrés à de tels articles, seront naturellement touchés de la même façon. Une mesure des salaires qui prendrait en compte les changements de prix à la consommation peut se calculer en réduisant les salaires moyens réels du taux d'accroissement des prix à la consommation, ou en les augmentant dans une proportion égale à la baisse des prix. Les salaires ainsi ajustés peuvent servir à indiquer le pouvoir d'achat comparatif des gains moyens si les prix à la consommation et les tendances de consommation étaient restés constants. L'exemple suivant montre comment on peut procéder à un ajustement de cette nature.

Supposons qu'une série de salaires hebdomadaires moyens passe de \$80 pendant la semaine A à \$100 au cours de la semaine B, et qu'au cours de la même période un indice des prix à la consommation passe de 100 à 110. Par suite de la hausse de 10% des prix à la consommation, \$1 n'achètera pas autant au cours de

other hand, the 25% rise from \$80.00 to \$100.00 will overstate the increase which has occurred in the purchasing power of average weekly wages. This overstatement can be removed by reducing the figure of \$100.00 by the amount of the consumer price index increase. The adjusted average is $\$90.91 ((100.0/110.0) \times \$100)$, which may be referred to as a weekly wage average for week B expressed in the dollars of period A; or it may be said to indicate the level of real weekly wages relative to week A.

The foregoing calculation can be carried a step further to express, in index number form, the relationship between the week A average of \$80.00 and the week B adjusted figure of \$90.91. Assuming the week A average of \$80.00 as an index equal to 100, the week B index becomes 113.6 $((90.91/80.00) \times 100)$. Such an index may be called an index of average weekly real wages. It indicates that average wages for week B will buy 13.6% more goods and services than they did in week A, in spite of a 10% rise in consumer prices. This 13.6% increase in real wages compares with the 25% rise in money wages $((\$100.00 - \$80.00 / \$80.00) \times 100)$.

In Table 13, the index numbers of average weekly wages in manufacturing in current dollar terms (1961 = 100) are calculated by dividing the weekly wages in current dollars by the 1961 average weekly wage in current dollars and multiplying the result by one hundred. For example, the weekly wage index for September 1972 in current dollars (1961 = 100) is 196.4 $((146.23/74.45) \times 100)$. The weekly wages in 1961 dollar terms are determined by dividing the weekly wage in current dollars by the consumer price index for Canada for the month following the month to which the wages relate and multiplying the result by one hundred. Thus, the September 1972 weekly wage in 1961 dollars is \$102.98 $((146.23/142.0) \times 100)$. (The wage and the price data both refer to generally similar time periods: current wages for a particular month relate to the last pay periods in that month, while most prices for the consumer price index of the following month are collected in the first week of that month.)

The index numbers of weekly wages in 1961 dollar terms (1961 = 100) are determined by dividing the weekly wages in 1961 dollars by the base (1961) average weekly wage and multiplying the result by one hundred. For example, the September 1972 weekly wage index in 1961 dollar terms (1961 = 100) is 138.3 $((102.98/74.45) \times 100)$.

It should be noted that while the estimates of average real wages may reflect the experiences of broad groups of workers in manufacturing fairly well, their applicability to individual wage-earners depends upon a number of considerations. For example, individual earnings will differ significantly from the group average, depending upon occupation, industry, geographical location, or sex of the wage-earner. Moreover, individual spending habits differ widely, but the consumer price index which is used to adjust the earnings data refers only to the average consumption pattern of a particular population group. Group spending patterns change over periods of time. To the extent that this occurs, the wage data adjusted by the consumer price index (which has a "fixed" consumption pattern), will gradually be ren-

la semaine B qu'au cours de la semaine A. Par contre, la hausse de 25% (de \$80 à \$100) va surévaluer la hausse qui s'est produite dans le pouvoir d'achat des salaires hebdomadaires moyens. Cette surévaluation peut être réduite en réduisant le chiffre de \$100 du montant de l'accroissement de l'indice des prix à la consommation. La moyenne ajustée sera \$90.91 $((100.0/110.0) \times 100)$, c'est-à-dire que l'on peut désigner comme étant la moyenne du salaire hebdomadaire pour la semaine B exprimée en dollars de la période A; on peut aussi dire qu'elle indique le niveau réel des salaires par rapport à la semaine A.

On peut pousser ce calcul plus loin, en exprimant à l'aide d'un indice, la relation entre le salaire moyen de \$80 de la semaine A, et le salaire révisé de \$90.91 de la semaine B. En supposant que la moyenne de la semaine A soit un indice égal à 100, l'indice de la semaine B devient 113.6 $((90.91/80.00) \times 100)$. On pourra appeler un tel indice l'indice de la rémunération hebdomadaire effective. Il indique que le salaire moyen pour la semaine B permettra aux consommateurs d'acheter pour 13.6% de plus de biens et services que pendant la semaine A, et ceci, en dépit de l'augmentation de 10% des prix à la consommation. Cette augmentation effective de 13.6% se compare à l'augmentation de 25% des salaires $((\$100.00 - \$80.00 / \$80.00) \times 100)$.

Au Tableau 13, les nombres indices des salaires hebdomadaires moyens dans les industries manufacturières en dollars courants (1961 = 100) s'obtiennent en divisant les salaires hebdomadaires en dollars courants par le salaire hebdomadaire moyen de 1961 en dollars courants et en multipliant le résultat par cent. Ainsi, l'indice des salaires hebdomadaires pour septembre 1972 exprimés en dollars courants (1961 = 100) est 196.4 $((146.23/74.45) \times 100)$. Les salaires hebdomadaires en dollars de 1961 s'obtiennent en divisant les salaires hebdomadaires en dollars courants par l'indice des prix à la consommation pour le Canada pour le mois qui suit celui auquel se rapportent les salaires, et en multipliant le quotient par cent. Ainsi, le salaire hebdomadaire de septembre 1972 exprimé en dollars de 1961 est \$102.98 $((146.23/142.0) \times 100)$. (Les données sur les salaires et les prix portent en général sur des périodes semblables: les salaires courants d'un mois donné sont généralement ceux des dernières périodes de paie du mois, alors que la plupart des prix pour l'indice des prix à la consommation du mois suivant sont recueillis au cours de la première semaine de ce mois.)

Les nombres indices des salaires hebdomadaires en dollars de 1961 (1961 = 100) s'obtiennent en divisant les salaires hebdomadaires en dollars de 1961 par les salaires hebdomadaires moyens de l'année de base (1961) et en multipliant le quotient par cent. Ainsi, l'indice des salaires hebdomadaires pour septembre 1972, exprimés en dollars de 1961 (1961 = 100), sera 138.3 $((102.98/74.45) \times 100)$.

Il convient de souligner que, même si les estimations des salaires réels moyens résument assez bien la situation d'un large éventail de travailleurs dans les industries manufacturières, elles ne peuvent être appliquées aux individus sans quelques précautions. Ainsi, le revenu d'un salarié s'écartera sensiblement de la moyenne du groupe en fonction de sa profession, de l'industrie dans laquelle il travaille, de sa situation géographique ou de son sexe. De plus, les habitudes de consommation varient considérablement d'un individu à l'autre, alors que l'indice des prix à la consommation qui sert à redresser les données sur les gains se rapporte uniquement sur la structure moyenne de consommation du groupe déterminé. De même, les habitudes de consommation changent avec le temps. Ainsi, les données sur les gains rajustées par l'indice des prix à la consommation (les habitudes de consommation)

dered less valid; the consumer price index weighting pattern was last revised in May 1973, and prior to that, in 1961. Furthermore, some part of income may be saved, and it should be borne in mind that it is not appropriate to reduce savings to a constant dollar basis by using an index which reflects consumption patterns.

It should also be kept in mind that measures of change in real earnings calculated from averages of gross earnings may differ from changes in the purchasing power of "take-home" pay, due to such factors as changes in personal income tax and pay deductions for such things as social insurance and pension plans. Thus index numbers of real wages should not be interpreted as measuring fluctuations in the levels of consumption of wage-earners or wage-earners' families; they are intended to show only the trend in purchasing power of wages over the items covered by the price index, and in addition to the factors already mentioned, do not take into account other family income (including family allowances) or changes in the savings position of families.

The table in this report showing indexes of both actual (current dollar) and real (constant dollar) wages uses 1961 as a reference year. However, any reference period may be chosen as a base since percentage changes between any two periods will be the same regardless of the reference period selected.

Further information regarding Table 13 can be obtained from: Labour Division, Statistics Canada.

Inter-City Retail Price Comparisons

Statistics relating to differences in retail prices between Canadian cities were initially developed for food, and subsequently extended to cover such other elements of the family budget as clothing, transportation, household operation, health and personal care, recreation, education and reading, and tobacco and alcohol. In all, inter-city price comparisons are drawn for commodities and services comprising nearly three-quarters of the budget on which the Consumer Price Index for Canada is currently based with the major omission being shelter (both rented and owned). While recognizing the importance of shelter differentials in any overall comparison of the general price level being countered by consumers in different urban centres, the problems inherent in drawing valid comparisons between cities are such as to require further research. Meanwhile, it is considered that, despite the absence of shelter differentials at this time, publication of retail price comparisons for other elements of the budget will go some distance towards serving the varied needs of users.

Table 14 presents the results of an updating of earlier retail price measurements to May 1971 and includes more complete data on several cities. A fuller explanation of the study from which this table is derived is contained in the November 1968, November 1969 and April 1972 issues of *Prices and Price Indexes* (Statistics Canada, Catalogue Number 62-002).

mation étant supposées "fixes") perdront graduellement de leur valeur; le schéma de pondération de l'indice des prix à la consommation a été révisé pour la dernière fois en mai 1973, et avant cela, en 1961. De plus, il ne faut pas oublier qu'une partie du revenu peut être épargnée et qu'il serait faux de recalculer cette épargne en dollars constants à partir d'un indice qui se rapporte à des habitudes de consommation.

De même, il faut se rappeler que l'évaluation des variations des gains effectifs calculées à partir de moyennes effectives peut différer de l'évaluation des variations du pouvoir d'achat du revenu disponible en raison de facteurs tels que l'évolution de l'impôt sur le revenu des particuliers et des retenues destinées à l'assurance sociale, aux régimes de pensions, etc. Ainsi, l'indice de la rémunération effective ne sert pas à mesurer les variations des niveaux de consommation des salariés ou de leurs familles, mais plutôt à montrer les tendances du pouvoir d'achat des salariés par rapport aux articles contenus dans l'indice; enfin, l'indice ne prend pas en compte les autres revenus des familles (tels que les allocations familiales) ou les variations de l'épargne des familles.

La période de référence du tableau qui présente les salaires tant réels (en dollars courants) qu'effectifs (en dollars constants) prend pour base l'année 1961. En fait, on peut choisir n'importe quelle période de référence comme base, puisque les taux de variation entre deux périodes seront les mêmes quelle que soit la période de référence choisie.

On peut obtenir plus de renseignements sur le tableau 13 en s'adressant à la Division du travail, Statistique Canada.

Comparaisons entre les prix de détail d'une ville à l'autre

À l'origine, la statistique des différences entre les prix de détail d'une ville du Canada à l'autre a été mise au point pour l'alimentation; par la suite, on l'a étendue à d'autres postes du budget familial tels que l'habillement, les transports, l'entretien du ménage, la santé et les soins personnels, les loisirs, la formation et la lecture, et le tabac et l'alcool. Au total, les comparaisons d'une ville à l'autre portent sur des biens et des services constituant près des trois quarts du budget servant actuellement à construire l'indice des prix à la consommation au Canada, la seule grande omission étant le logement (location et frais de possession). Sans vouloir nier l'importance des différences en ce qui concerne le logement dans toute comparaison globale du niveau général des prix auxquels les consommateurs doivent faire face dans divers centres urbains, il faut bien dire que les problèmes que comporteraient l'établissement d'une comparaison valable d'une ville à l'autre sont tels qu'ils nécessitent plus de recherche. Entre-temps, on estime que malgré l'absence actuelle de données sur les dépenses de logement, la publication de comparaisons des prix de détail pour d'autres postes du budget permettra de faire de gros progrès en ce qui concerne la satisfaction des besoins variés des utilisateurs.

On trouvera au Tableau 14 le résultat d'une mise à jour de mesures de prix de détail tirées précédemment jusqu'à mai 1971, ainsi que des données plus complètes sur plusieurs villes. Une explication plus détaillée de l'étude dont le tableau en question est tiré figure dans les livraisons de novembre 1968, novembre 1969, et avril 1972 de *Prix et indices des prix* (no 62-002 au catalogue).

The original data base of this study was the wide range of retail price quotations collected in the course of production of the national and urban Consumer Price Indexes. In developing these spatial price comparisons, efforts were made to achieve comparability by equating qualities of goods and services and by matching types of retail outlets, as far as possible. Price relationships between pairs of cities were derived and subsequently converted to a common base of Winnipeg prices equalling 100 to facilitate comparisons over the whole range of cities. Except for foodstuffs and new passenger cars for which inter-city price differentials were derived directly from new comparisons based on May 1971 price data, the updating of these measurements of inter-city retail price differentials was accomplished by application of the relative movement of prices, at the item level in each city, over the intervening periods as derived from the relevant city consumer price indexes. These price relationships at the item level were aggregated on the basis of the Canada urban consumer spending pattern, rather than the patterns applicable to individual cities. While differences in spending patterns exist among cities, the magnitude of these differences in the cities covered is not such as to affect most of the spatial comparisons significantly. Because of the previously mentioned absence of shelter price relationships, which may be of considerable significance in any overall comparison of inter-urban retail price differentials, aggregative indexes beyond major budget groupings are not shown.

The weighting factors used to combine items to group and component levels in Table 14 are based on 1957 expenditures, and therefore will not be identical to the 1967 weights, introduced in May 1973, in Consumer Price Index tables.

It should be noted that the retail prices used in this comparison, being those faced by consumers, include sales and excise taxes as applicable. Variations between provinces in the scale of sales taxes imposed on a wide range of non-food commodities can be of significance in explaining inter-city price differentials for these items.

While these indexes have been expressed in terms of Winnipeg = 100, the selection of Winnipeg as the base city has no special significance, and the indexes may be expressed on the base of any of the individual cities included.

Farm Input Price Indexes (1961 = 100)

Farm Input Price Indexes measure, through time, changes in prices of commodities and services used in Canadian farming operations. The item content and weights are based on data from the 1958 Farm Income and Expenditure Survey, the most recent source of sufficiently detailed data. These data have been modified to reflect 1961 prices and conditions. Farm Input Price Indexes are calculated quarterly for Eastern, Western and all Canada on a 1961 = 100 time base.

Les premières données de base pour la présente étude ont été constituées par l'importante collection de prix de détail recueillie lors de la confection des indices nationaux et urbains de prix à la consommation. Au moment d'établir ces comparaisons géographiques de prix, on s'est efforcé d'assurer la comparabilité en prenant des biens et des services de qualité égale et en assortissant autant que possible les points de vente au détail par type. Les relations de prix entre paires de villes ont été calculées puis converties à la base commune des prix de Winnipeg = 100 afin de faciliter des comparaisons pour l'ensemble de toutes les villes. Sauf pour les denrées alimentaires et les voitures neuves pour lesquelles les différences de prix entre villes ont été tirées directement de nouvelles comparaisons fondées sur les données de mai 1971, la mise à jour de ces mesures des différences de prix de détail entre les villes a été assurée grâce à l'extension des mouvements relatifs de prix au niveau de chaque article dans chaque ville aux périodes observées selon le calcul établi à partir de l'indice de prix à la consommation pour la ville en question. Ces relations entre les prix au niveau de l'article ont été agrégées sur la base des habitudes de consommation du citoyen pour l'ensemble du Canada et non pas selon les habitudes de dépense applicables à des villes individuelles. Même s'il existe des différences dans les habitudes de dépense d'une ville à l'autre, l'importance de ces différences en ce qui concerne les villes dont il est question ici ne sont pas suffisantes pour influencer sensiblement sur la plupart des comparaisons géographiques. Du fait de l'absence des relations de prix en ce qui concerne le logement, dont il a déjà été question ci-dessus et qui pourrait avoir une importance considérable chaque fois que l'on voudrait tirer une comparaison globale entre les différences de prix à la consommation au détail d'une ville à l'autre, on ne trouvera ici aucun indice synthétique agrégé au-dessus des principales composantes du budget.

Les facteurs de pondérations utilisés pour regrouper les articles en groupes et en éléments dans le Tableau 14 sont basés sur les dépenses de 1957; ils ne sont donc pas identiques aux pondérations de 1967 adoptées en mai 1973 dans les tableaux relatifs à l'indice des prix à la consommation.

Il faut remarquer que les prix de détail ayant servi à la présente comparaison sont ceux que doit payer le consommateur et comprennent donc les taxes de vente et les taxes d'accises qui peuvent s'appliquer. Les différences d'une province à l'autre en les barèmes de taxe de vente imposés sur une grande variété de biens non alimentaires peut avoir une grande importance pour expliquer les différences de prix d'une ville à l'autre pour les articles en question.

Le fait que ces indices aient été exprimés en prenant Winnipeg = 100 ne signifie pas que le choix de Winnipeg comme ville de référence ait une signification particulière et les indices pourraient être exprimés sur la base de n'importe laquelle des villes qui y figurent.

Indices de prix des entrées dans l'agriculture (1961 = 100)

Les indices de prix des entrées dans l'agriculture mesurent l'évolution dans le temps du prix des produits et des services utilisés dans l'exploitation agricole au Canada. Les articles qui sont compris, ainsi que leurs poids, sont fondés sur l'enquête de 1958 sur les revenus et les dépenses des agriculteurs, qui constitue la source la plus récente dont les données soient suffisamment détaillées. Ces données ont été adaptées de manière à rendre compte des prix et des conditions constatées pour 1961. Les indices des prix des entrées dans l'agriculture sont calculés chaque trimestre pour l'Est, l'Ouest et l'ensemble du Canada sur la base de 1961 = 100.

Farm Input Price Indexes replace one of the two major component indexes of the previously published series, Price Index Numbers of Commodities and Services Used by Farmers, 1935-39=100. The latter index was composed of a Farm Family Living Index and a Composite Index Exclusive of Living Component. The Farm Input Price Indexes replaces the Composite Index Exclusive of Living Component from 1961 forward.

A detailed description of concepts, methods and data sources is contained in the occasional paper, *Farm Input Price Indexes, 1961=100*, Catalogue No. 62-534, and is reproduced in the September 1971 issue of *Prices and Price Indexes*, Catalogue No. 62-002. The foregoing publications also contain total and component price indexes for Eastern, Western, and all Canada, from 1961 to and including the third quarter 1971.

Current price indexes will be published on a regular basis in the quarterly publication, *Farm Input Price Indexes, 1961=100*, Catalogue No. 62-004, and in the monthly publication *Prices and Price Indexes*, Catalogue No. 62-002.

The Farm Family Living component of the 1935-39 series has not been replaced by an updated counterpart, and publication has been suspended.

Security Price Indexes

Security price indexes measure through time the effect of price change on the value of a portfolio of stocks bought and held by a hypothetical investor (as opposed to the more speculative trader). The portfolio represents stocks of Canadian companies listed on Toronto and Montreal stock exchanges.

The number of shares held for each issue is in proportion to the total number of shares outstanding. Prices in the investor's mining and supplementary stock indexes are Thursday's closing quotations from the exchange (Montreal, Toronto, Vancouver or Calgary) with the highest volume for particular stock, as reported in the Daily Canadian Data Bank of the Financial Post Computer Services Department. For preferred stocks, prices are monthly weighted averages of the daily closing price in which weights are daily total volume. The price reference base for the indexes is the year 1956, and the indexes express prices as a percentage of price 1956, arithmetically converted to the 1961=100 base.

Revised indexes on the base 1956=100 were first presented in the June 1962 issue of this publication. The most important change in the revision of the indexes, apart from a shift in the price reference base, was the classification of stocks according to the Standard Industrial Classification. In continuing major group Industrials, 4 sub-groups (Mill and Grains, Food and Allied Products, Machinery and Equipment, and Building Materials) were replaced by 8 new sub-groups (Foods, Printing and Publishing, Primary Metals, Metal Fabricating, Non-metallic Minerals, Chemicals, Construction and Retail Trade). The remaining 5 sub-groups of the former index, viz., Industrial Mines, Beverages, Textile

Les indices des prix des entrées dans l'agriculture remplacent l'un des deux principaux éléments d'indices de la série précédente sur l'indice de prix des produits et services utilisés par les agriculteurs, (1935-39=100). Cet indice comprenait l'indice du coût de la vie pour les familles agricoles et l'indice synthétique sans le coût de la vie. Les indices des prix des entrées dans l'agriculture remplacent l'indice synthétique sans le coût de la vie à partir de 1961.

Le bulletin hors série *Farm Input Price Indexes, 1961=100* (no 62-534 au catalogue) contient une description détaillée des concepts, des méthodes et des sources de données qui est reprise dans *Prices and Price Indexes* de septembre 1971 (no 62-002 au catalogue). Ces deux bulletins contiennent également les indices des prix totaux et partiels pour l'Est et l'Ouest du Canada et pour l'ensemble du Canada, de 1961 au troisième trimestre de 1971 inclusivement.

Les indices des prix en cours seront publiés régulièrement dans le bulletin trimestriel *Farm Input Price Indexes, 1961=100* (no 62-004) et dans le bulletin annuel *Prices and Price Indexes* (no 62-002).

On n'a pas remplacé l'indice du coût de la vie pour la famille agricole des séries de 1935-39 par un équivalent à jour et on a cessé de la publier.

Indices des cours des valeurs mobilières

Les indices des cours des valeurs mobilières mesurent dans le temps l'incidence du mouvement des prix sur la valeur d'un portefeuille de titres achetés et détenus par un actionnaire hypothétique (par opposition au spéculateur). Le portefeuille comprend des actions de sociétés canadiennes cotées à la Bourse de Toronto et de Montréal.

Le nombre d'actions détenues pour chaque émission est proportionnel au nombre total d'actions en circulation. Les indices des prix des titres miniers et les indices supplémentaires sont les cours de fermeture de jeudi (Montréal, Toronto, Vancouver et Calgary) affichant le volume le plus élevé pour une valeur en particulier, d'après la Banque des données canadiennes quotidiennes du Service de l'informatique du *Financial Post*. Pour les actions privilégiées, les prix sont les moyennes pondérées mensuelles des cours de clôture de chaque jour et les poids, le volume quotidien total. La période de référence pour les indices est l'année 1956 et les indices représentent les prix exprimés en pourcentage des prix de 1956 recalculé sur la base 1961=100.

Les indices révisés sur la base 1956=100 ont été publiés pour la première fois dans la livraison de juin 1962 de cette publication. La modification la plus importante à la révision de l'indice, à part le changement de la période de référence, a été le classement des actions d'après la Classification des activités économiques. Dans le cas du grand groupe des valeurs industrielles, 4 sous-groupes (minoterie et céréales, aliments et produits connexes, machines et matériel et matériaux de construction) ont été remplacés par 8 nouveaux sous-groupes (aliments, imprimerie et édition, métaux primaires, produits métalliques, minéraux non métalliques, produits chimiques, construction et commerce de détail). On a conservé les 5 autres sous-groupes de l'ancien indice:

and Clothing, Pulp and Paper, and Oils (renamed Petroleum) were continued. The major group utilities was continued but the Pipelines index was added as a sub-group and the previous Power and Traction sub-group was replaced by two new sub-groups, viz., Electric Power and Gas Distribution. A major group Finance was composed of the former major group Banks and the former supplementary index Investment and Loan. Constant weights which were previously limited to major groups, were extended to sub-groups. Weights in the index continue to be based on shares outstanding.

A revision of the Security Price Indexes to the 1971 = 100 base is under development.

For the list of stocks currently included in the Investors Index and Preferred Index, see *Prices and Price Indexes* for March 1974.

Residential and Non-Residential Building Construction Price Indexes

The fixed-weighted input price indexes of materials and wage rates for residential and non-residential building construction are being published here for the convenience of users (Table 20). A more complete description of the characteristics of the indexes appeared in the May 1970 issue of *Prices and Price Indexes*, and this explanation is available on request from the Prices Division, as is historical monthly data for the series.

Because the indexes measure the impact of price change on the materials and labour inputs to construction, and not the effects of changes in profit margins or productivity, there is thought to be an upward bias in these indexes as indicators of price change for the output of building construction, or buildings in place. Users are therefore warned to exercise caution in making use of the series, for this purpose. A comparison of these series with the implicit price deflators⁽¹⁾ providing an estimate of price change for the output of the industry, derived from the measurement of gross fixed capital formation in constant dollars, will provide some insight into the effects on the price movement of adjusting the fixed-weighted input indexes for changes in productivity and profit margins.

During the period from 1926-1966 a special sample or respondents supplied materials prices for the index. As of 1961 this sample has been replaced with prices from the ISPI system⁽²⁾. The latter are published monthly in Table 2 of this publication.

The Construction wage rate series is based on wage rate material supplied by the Labour Standards Branch, Dept. of Labour, and relates to minimum wages paid on government contracts for construction in a variety of trades and cities.

mines industrielles, boissons, textiles et habillement, pâte à papier, et huiles (sous la désignation de pétrole). Le grand groupe de services d'utilité publique a été conservé mais l'indice des pipelines a été ajouté comme sous-groupe et l'ancien sous-groupe d'énergie et traction a été remplacé par deux nouveaux sous-groupes: l'énergie électrique et la distribution du gaz. Le nouveau grand groupe "Finances" est composé de l'ancien grand groupe banques et de l'ancien indice supplémentaire investissement-prêts. Les facteurs constants de pondération qui étaient autrefois limités aux grands groupes s'appliquent maintenant aux sous-groupes. Les facteurs de pondération de l'indice continuent à être basés sur les actions en circulation.

On prépare actuellement une révision des Indices des valeurs mobilières sur la base 1971 = 100.

La liste des titres repris actuellement dans les indices des valeurs de placements et dans les indices des valeurs privilégiées se trouve dans *Prix et indices des prix* de Mars 1974.

Indices des prix de la construction résidentielle et non résidentielle

Les indices à pondération fixe des prix des entrées matériaux et de salaires dans la construction résidentielle et non résidentielle sont publiés ici pour faciliter la tâche aux utilisateurs (Tableau 20). On trouvera une description plus détaillée des caractéristiques des indices dans *Prices and Price Indexes* de mai 1970. On peut s'en procurer un exemplaire ainsi que les données mensuelles chronologiques sur cette série en s'adressant à la Division des prix.

Comme les indices mesurent l'influence des variations de prix sur les entrées de matériaux et de main-d'oeuvre du bâtiment plutôt que les répercussions des variations de marges bénéficiaires ou de productivité, on les croit surestimés en tant qu'indicateurs des variations de prix de la construction, ou des bâtiments construits. Les utilisateurs devront donc faire preuve de discernement quand ils se serviront des séries à cette fin. Si l'on compare ces séries avec les facteurs de dégonflement⁽¹⁾ des prix implicites (qui donnent une estimation de la variation du prix pour la production de l'industrie), obtenus en mesurant la formation brute de capital fixe en dollars constants, on aura un aperçu des effets de l'ajustement sur l'évolution des prix des indices à pondération fixe des entrées pour tenir compte des variations de productivité et des marges bénéficiaires.

Au cours de la période 1926-1966, un échantillon spécial d'enquêtes a donné les prix pour l'indice. En 1961, on a remplacé cet échantillon par les prix tirés du système I.P.V.I.⁽²⁾. Ces prix sont publiés par mois dans le Tableau 2 du présent bulletin.

La série consacrée au taux de rémunération dans l'industrie du bâtiment est basée sur les chiffres fournis par la Direction des normes du travail du ministère du Travail; elle a trait au salaire minimum versé aux termes de marchés signés avec le gouvernement pour des travaux de construction dans divers secteurs de métiers et dans diverses villes.

(1) Gross National Product Division, Statistics Canada.

(2) *Industry Selling Price Indexes 1956-1968* Cat. 62-528.

(1) Division du produit national brut, Statistique Canada.

(2) *Indices des prix de vente dans l'industrie, 1956-1968* Cat. 62-528 au catalogue.

Users are reminded that the indexes were arithmetically rebased to the year 1961 = 100 and therefore combining the components with the weights as shown will not provide the composite index provided. Users able to provide their own weights for the components can recombine the components to suit their particular needs.

Basic Union Wage Rate Indexes for Major Construction Trades

Basic union wage rate indexes are prepared for 12 major construction trades in each of 14 cities in Canada. Weighted average city indexes are prepared as well as a 14 city composite. Indexes are released quarterly in summary form in Tables 21 and 22 of Prices and Price Indexes (62-002). This index is found in Table 20 of Prices and Price Indexes (62-002). Full trade detail, by city, is published quarterly in the Construction Price Statistics Service Bulletin, (62-006).

Rates utilized in index calculations are derived mainly from the *Construction Collective Agreement Survey Service* provided by the Canadian Construction Association. These rates are supplemented as necessary by surveys of some union locals. While indexes containing supplementary benefits will be available soon, presently published indexes relate to basic union wage rates only. The rates indicate the rate of overtime compensation for one hour in the city specified. Rates converted into the form of ratios were combined into weighted average city indexes utilizing 1961 Census of Population data on numbers of people employed by trade and average earnings in the construction industry.

The base-weighted indexes provide an estimate of the impact of rate change on basic union wages for the major construction trades employed in a given city. Because union workers in cities tend to be engaged mainly in non-residential commercial building construction and because rates for trades associated with engineering work were excluded from the price sample the indexes best approximate wage rate change for non-residential construction.

Highway Construction Price Indexes (1961 = 100) (3)

The Price Indexes of Highway Construction in Canada express prices paid by provincial governments in contracts awarded for highway construction each year, as a percentage of prices paid in 1961. The arithmetic conversion of the indexes to a 1961 time base does not change their percentage movements as compared to the previously published indexes to a 1956 = 100 time base. Users are warned that an aggregation of the converted major group indexes with the published weights will not yield the published 1961 = 100 all items indexes. The conversion does not create a problem for a user wishing to reweight the converted major group indexes using weights appropriate to this own use.

The years refer to fiscal years. Thus 1968 refers to the period April 1, 1968 to March 31, 1969.

Nous rappelons aux utilisateurs que les indices ont été recalculés sur la base 1961 = 100 et qu'ils n'obtiendront pas l'indice synthétique fourni en combinant les éléments et les pondérations donnés. Les utilisateurs qui sont à même de fournir leur propre pondération pour les éléments peuvent procéder à leur propre combinaison adaptée à leurs besoins spécifiques.

Indices du salaire syndical de base dans les principaux corps de métiers

Les indices du salaire syndical de base portent sur les 12 principaux métiers de la construction dans 14 grandes villes canadiennes. On calcule les indices pondérés moyens pour chaque ville de même que l'indice synthétique des 14 villes. Les indices sont publiés chaque trimestre dans les Tableaux 21 et 22 de la publication *Prix et indices des prix* (numéro de catalogue 62-002). On peut trouver cet indice dans le Tableau 20 de la publication *Prix et indices des prix* (no 62-002). Des données détaillées sur tous les métiers de la construction dans chaque ville sont publiés chaque trimestre dans le bulletin de service *Statistique des prix dans la construction* (numéro de catalogue 62-006).

Les taux utilisés dans le calcul des indices proviennent principalement de la publication *Construction Collective Agreement Survey Service* de l'Association canadienne de la construction. Des enquêtes auprès de certaines succursales de syndicats ont été menées lorsqu'il fallait disposer de taux supplémentaires. On publiera sous peu des indices contenant les avantages supplémentaires, mais les indices actuels portent uniquement sur le salaire syndical de base. Les taux correspondent à la rémunération normale pour une heure dans la ville en question. Les taux convertis en ratios ont été transformés en indices pondérés moyens des villes à partir des données tirées du recensement de la population de 1961 sur les effectifs de chaque métier et les gains moyens dans l'industrie de la construction.

Les indices pondérés permettent d'évaluer l'influence de la variation du taux des salaires syndicaux pour les principaux métiers de la construction dans une ville donnée. Étant donné que les travailleurs syndiqués dans les villes s'occupent surtout de la construction non résidentielle, ou commerciale, et que les taux des métiers relevant du génie civil n'ont pas été inclus dans l'échantillon des prix, les indices constituent la meilleure approximation des variations dans les taux de salaire dans la construction non résidentielle.

Indices des prix de la construction routière (1961 = 100) (3)

Les indices des prix de la construction routière au Canada représentent les prix payés chaque année par les administrations provinciales au titre des marchés de construction routière, en pourcentages des sommes payées en 1961. La conversion des indices à la base 1961 = 100 ne modifie pas leur évolution en pourcentages comparativement aux indices publiés précédemment et dont la base était 1956 = 100. Les utilisateurs ne doivent pas s'attendre à ce que le groupement des indices convertis des grands groupes et des pondérations publiées donne l'indice général publié (1961 = 100). Cette conversion ne pose aucun problème à l'utilisateur qui désire réviser la pondération des indices convertis des grands groupes en utilisant les poids adaptés à ses fins propres.

(3) Il s'agit d'exercices financiers. 1968 représente donc la période de 1er avril 1968 au 31 mars 1969.

Base-weighted indexes are published annually and measure, for the period 1956 to 1968, the effect of price change on the cost of specific programmes of highway construction in Canada represented by highway construction contracts of approximately \$50,000 or more awarded by specified provincial governments during the weight-base period. Weights of items in the index, representing the relative importance of units of construction in the year 1956 are held constant. Only the estimates of prices change from year to year, and the indexes thus measure the movement of prices through time. For a more complete statement of the problem of estimating price change for highway construction see pages vi & vii of the December 1967 issue of *Prices and Price Indexes*, Catalogue 62-002 and pages 9 & 10 of the reference paper *Price Indexes of Highway Construction in Catalogue 62-520*. The all-items index or its components are useful for planning and budgeting for highway construction programmes, in escalating or updating previously costed roadwork, in estimating replacement cost of previously completed roadwork, and as historical measurements of price trends in highway construction.

The indexes do not necessarily reflect the price movements of non-contract construction or maintenance work. The indexes are designed to measure price changes for a fixed programme of highway construction, in each of the seven provinces. Because price levels in the time base-period (1961) varied from province to province the indexes cannot be used to compare price differences between provinces, but only to compare differences in the rate at which prices are changing in the provinces.

Prices contained in the index are not for units of labour and materials as is usually the case in construction price indexes but rather for units of construction work put in place such as an acre of clearing, a cubic yard of earth excavation or a ton of bituminous hot-mix paving. In addition, the index contains prices of some materials, such as culvert pipe, usually supplied to the contractor by the highway departments. Prices of highway construction work are annual weighted averages of bid prices of units of construction in groups of contracts awarded, classified by price-determining characteristics of the contracts and the bid items such as volume of the bid item, type of contract and geographic location. Prices of material items of supply are prices paid by government departments to suppliers.

Price Indexes of Electric Utility Construction

In electric utility terms, the index is designed to provide an estimate of the impact of price change on the cost of materials, labour and equipment used in constructing and equipping electric utilities in a specified base period. The index provides an estimate of how much more, or less it would cost to reproduce the base-period programme of construction in another period, using the same construction technology as in the base period and assuming rates of profit and productivity in construction are the same in both periods.

Les indices pondérés en fonction de la base sont publiés chaque année; ils mesurent, pour la période allant de 1956 à 1968, l'influence de l'évolution des prix sur le coût des programmes spécifiques de construction de routes au Canada représenté par les marchés de construction de routes d'environ \$50,000 ou plus accordés par certaines administrations provinciales au cours de la période visée par la base de pondération. Les poids des éléments des indices qui représentent l'importance relative des unités de construction en 1956 sont constants. Seules les estimations de prix varient d'une année à l'autre; les indices mesurent donc l'évolution des prix dans le temps. Pour plus de détails sur l'estimation de l'évolution des prix pour la construction routière, se reporter aux pages vi et vii du numéro de décembre de *Prices and Price Indexes* (Numéro 62-002 au catalogue de Statistique Canada) et aux pages 9 et 10 du bulletin intitulé *Price Indexes of Highway Construction in Canada* (no 62-520 au catalogue de Statistique Canada). L'indice général ou ses éléments servent à la planification et à la budgétisation des programmes de construction routière, à indexer ou à mettre à jour les prix de travaux de routes effectués précédemment, à estimer le coût de remplacement des travaux routiers achevés précédemment et à mesurer chronologiquement l'évolution des prix de la construction routière.

Les indices ne reflètent pas nécessairement l'évolution des prix de la construction effectués hors marché ou des travaux d'entretien; ils servent à mesurer les variations de prix pour un programme déterminé de construction routière dans chacune des sept provinces. Au cours de la période qui a servi de base (1961) les niveaux de prix ont varié d'une province à l'autre; aussi, on peut utiliser les indices pour comparer des différences de prix entre les provinces mais on peut seulement les employer pour comparer les différences entre taux de variation des prix dans les provinces.

Les prix compris dans l'indice ne se rapportent pas aux unités de travail ni de matériaux comme c'est habituellement le cas dans l'indice des prix de la construction; ils se rapportent plutôt aux unités de travail de construction effectué, comme le défrichage d'une acre de terrain, l'excavation d'une verge cubique ou l'épandage à chaud d'une tonne de béton bitumineux. En outre, l'indice comprend le prix de certains matériaux, par exemple, les tuyaux de ponceau fournis habituellement à l'entrepreneur par les ministères de la Voirie. Les prix des travaux de construction routière sont des moyennes pondérées des prix de soumission pour les unités de construction par groupe de marchés classés selon les caractéristiques des marchés qui déterminent le prix et les éléments d'offre tels que le volume de chaque poste, le type de marché et la situation géographique. Les prix de matériaux fournis sont les prix payés par les ministères aux fournisseurs.

Indices des prix à la construction dans les services d'électricité

En ce qui concerne les services d'électricité, l'indice a pour but de fournir une estimation des conséquences des variations des prix sur le coût des matériaux, de la main-d'œuvre et du matériel utilisés dans la construction et l'équipement des services d'électricité au cours d'une période de référence donnée. L'indice sert à mesurer combien il faudrait payer en plus ou en moins pour réaliser un programme de construction identique à celui de la période de référence en utilisant les mêmes techniques de construction et en supposant que les taux de rentabilité et de productivité de la construction soient les mêmes pour les deux périodes.

As the market does not yield comparable selling prices for such unique transactions as, for example, the sale of a transmission line, it was not possible to produce an index of the prices of completed structures. Completed structure indexes would be appropriate for users wishing either to estimate reproduction costs or to deflate capital formation. For such uses the indexes introduced in this publication have specific shortcomings. Nonetheless, they may be helpful for such purposes provided the users understand the deficiencies. Thus the reader is asked to make particular note of Section II, of Occasional Paper Catalogue 62-526 Price Indexes of Electrical Utility Construction - The Necessity for Compromise and Section XI, (of the same paper) Uses and Limitations. In addition, because particular construction projects are unique, the aggregate indexes will not likely be appropriate for specific projects since they relate to an average mix of materials, labour and equipment derived from a variety of projects in a specific base period. Thus, if the component price indexes and their weights included in the aggregate index presented herein are inappropriate for a particular purpose the user should consider selecting appropriate component indexes from among those published herein. These indexes could then be combined into an aggregate index by utilizing weights derived from the projects or assets to be indexed or deflated.

Prices used in the indexes are for the most part selling prices reported monthly by manufacturers for materials or equipment. The price reported is for units and terms of sale representative of the volume sales of the manufacturer. Where sales to electric utilities form a small share of the total sales of the manufacturer, the price reported may not adequately represent the price to the construction trade and users directly involved in constructing and equipping electric utility facilities. In such cases, prices charged other manufacturers or wholesalers have been included in the index. Federal sales tax changes are reflected in the index but no adjustments have been made for provincial tax changes. Until December 1964 wage rate data were supplied by the Federal Department of Labour and represented minimum hourly rates paid to construction workers in major cities employed on federal government contracts. In 1965 union wage rates reported by major utilities and some contractors were incorporated into the index. The sample selected provides an estimate of wage rate change for urban on account and contract electric utility construction. Some other improvements will be made to improve the coverage relating to rural non-union work for transmission lines.

Construction has been defined as new construction or reconstruction for distribution systems, transmission lines and transformation or switching stations. Maintenance and operating costs are excluded. Cost data were supplied by electric utilities, relating to own account and to contract construction erected during the last half of the 1950's. The weights were derived from these data which indicated the relative importance of the major inputs to the construction. Components of cost relating to distribution and transmission facilities encompass such items as poles, hardware, conductors, insulators, meters, distribution transformers and expenditures for labour, e.g. - linemen and groundmen. Costs

Comme il est impossible d'obtenir directement sur le marché des prix de vente comparables pour des opérations de caractère aussi unique, par exemple, que la vente d'une ligne de transport d'énergie, Statistique Canada n'a pu établir un indice du prix des installations en place. Un tel indice ne serait utile que si l'on désirait obtenir une estimation des sommes qu'il faudrait engager pour réaliser à nouveau un programme de construction identique ou encore pour dégonfler une formation de capital. Les indices publiés ici présentent en ce sens certaines lacunes. Ils peuvent néanmoins servir à de telles fins pourvu que les utilisateurs en comprennent les limites. Les lecteurs peuvent se reporter aux Sections III et XI de la publication *Price Indexes of Electrical Utility Construction* (Statistique Canada, 62-526): "The Necessity for Compromise" et "Uses and Limitations". De plus, en raison du caractère unique de chaque projet de construction, l'indice synthétique ne pourra sans doute pas s'appliquer à un projet bien précis car il porte justement sur une moyenne des matériaux, de la main-d'œuvre et du matériel utilisés dans la réalisation de plusieurs projets au cours d'une période de référence donnée. Ainsi, si les indices détaillés et les poids correspondants qui composent les indices synthétiques présentés ici ne conviennent pas à un usage bien précis, l'utilisateur pourra toujours se servir des autres indices détaillés et construire, à l'aide des coefficients de pondération, les indices de son choix, soit pour évaluer le coût d'un projet, soit pour établir des facteurs de dégonflement.

La plupart des prix des matériaux et du matériel utilisés pour établir les indices sont les prix de vente déclarés mensuellement par les fabricants. Ces prix sont représentatifs des unités de mesure et des conditions de vente valables pour les ventes en grande quantité de fabricants. Lorsque les ventes aux services électriques ne représentent qu'un faible pourcentage du chiffre d'affaire d'un fabricant, il est possible que le prix déclaré ne représente pas de façon satisfaisante le prix consenti aux entreprises en construction et aux autres industries s'occupant directement de construction et d'installation de services d'électricité. Dans ces cas, on a inclus dans l'indice les prix facturés aux autres fabricants ou grossistes. On a tenu compte, dans l'établissement de l'indice, des variations de la taxe de vente fédérale; toutefois, il n'a été fait aucun redressement pour les variations de taxe provinciale. Jusqu'en décembre 1964, les données sur les taux de rémunération étaient fournies par le ministère fédéral du Travail et représentaient le salaire horaire minimum versé aux personnes travaillant au titre d'un marché accordé par le gouvernement fédéral dans certaines grandes villes. En 1965, on fit entrer dans l'indice le salaire de base exigé par les syndicats et déclaré par les principaux services et par certains entrepreneurs. L'échantillon choisi représente donc une estimation des variations du taux de rémunération dans la construction en ville de services électriques pour compte propre ou au titre d'un marché. Certaines améliorations à l'indice sont prévues de façons à l'étendre aux personnes non syndiquées travaillant dans les régions rurales à la construction de lignes de transport d'énergie.

Le terme "construction" a été défini comme étant la construction neuve ou la réparation des réseaux de distribution, de lignes de transport d'énergie, de postes de transformation ou de postes de manœuvre. L'entretien et les frais d'exploitation ne sont pas compris. Les données sur les prix de revient sont fournies par les principaux services d'électricité et portent sur la construction exécutée pour compte propre ou au titre d'un marché au cours de la deuxième moitié des années cinquante. Les poids tirés de ces données représentent l'importance relative des principaux éléments entrant dans la construction. Les composantes du coût de la distribution et du transport comprennent certains éléments comme les poteaux, la quincaillerie, les conducteurs, les isolateurs, les

relating to construction equipment such as trucks, and components of equipment operating costs such as tires, gasoline and repairs were also included. Transformation and switching stations encompass some of the items listed above but the most important elements of cost relate to transformers and switching equipment. Expenditures for land and rights-of-way have been excluded.

The term Canadian electric utility has been defined to include municipal as well as nonmunicipal utilities but the majority of the cost data tabulated was derived from the major nonmunicipal utilities. Manufacturers who produce electricity for their own use and who may also sell electricity have been excluded from the cost survey.

Price Indexes of Hydro-electric Generating Stations

The following additional points may be of assistance to users of the hydro-electric generating stations index which was described in some detail in Statistics Canada Occasional Paper, Catalogue 62-533.

- (a) Wage rate data are derived from a variety of sources but mainly from the Canadian Construction Association surveys of union agreements and from Federal Pay Research Bureau studies of salaries paid professional, technical and clerical personnel. Basic wage rates, excluding fringe benefits, were used in index calculations.
- (b) Prices for ready-mix concrete and for earth and gravels in place have been utilized as replacements for input prices of labour, materials and equipment rental for concrete production and embankments in place.
- (c) Prices are included for some categories of expense not previously included in input price indexes for construction: interest during construction, overhead expense and the provision and operation of temporary camp accommodation.
- (d) Weighting patterns exclude expenditure for ancillary facilities for logging and navigation permanent houses, etc.

Price Indexes of Machinery and Equipment

In response to the need of users wishing either to correct expenditure data of machinery and equipment for price change or to make comparison of commodity movement, a system of machinery and equipment indexes has been under development for a number of years. This is a system of industry indexes relating to types of equipment purchases made by establishments belonging to industries as defined by the 1960 Standard Industrial Classification.

compteurs, les transformateurs de distribution et les dépenses en main-d'oeuvre (monteurs, personnel de service, etc.). Les dépenses entraînées par le matériel de construction (camions et pièces d'équipement) et les frais d'exploitation (pneus, essence et réparations) sont également inclus. Les postes de transformation et les postes de transformation et les postes de manœuvre comprennent certains des éléments ci-dessus; les frais les plus importants sont cependant entraînés par les transformateurs et les appareils de connexion. Les dépenses foncières et les droits de passage ont été exclus.

Par définition, l'expression "service d'électricité canadien" englobe aussi bien les services municipaux que les autres; toutefois, la majeure partie des données de coût ont été tirées des déclarations des services non municipaux. Les fabricants qui produisent de l'électricité destinée à l'auto-consommation et qui peuvent également vendre de l'électricité ont été exclus de cette enquête.

Indices de prix des centrales hydroélectriques

Les points supplémentaires ci-après peuvent aider les utilisateurs de l'indice de centrales hydroélectriques décrit en détail dans le bulletin hors-série de Statistique Canada portant le numéro 62-533.

- (a) Les données sur le taux de rémunération proviennent de diverses sources et surtout des enquêtes sur les accords syndicaux de l'Association canadienne de la construction et des études du Bureau de recherche sur les traitements portant sur la rémunération des travailleurs intellectuels, des techniciens et du personnel administratif. Pour le calcul de l'indice, on a utilisé les taux de rémunération de base, avantages sociaux non compris.
- (b) Au lieu du prix des entrées de main-d'oeuvre, de matériaux et de location de matériel pour la production de béton et des remblais effectués, on a utilisé le prix du béton préparé et celui de la terre et du gravier en place.
- (c) L'indice comprend les prix correspondant à certains postes de dépenses qui n'étaient pas repris auparavant dans les indices de prix des entrées dans la construction: intérêt pendant la construction, frais généraux, fourniture et entretien de baraquements temporaires.
- (d) Les facteurs de pondération ne comprennent pas les dépenses affectées aux installations auxiliaires pour l'exploitation forestière et la navigation, les maisons permanentes, etc.

Indices des prix des machines et du matériel

Afin de répondre au besoin des utilisateurs qui désirent réviser les données sur les dépenses en machines et en matériel ou fonction des changements de prix ou établir une comparaison du mouvement des marchandises, on prépare depuis un certain nombre d'années un système d'indices des prix des machines et du matériel. Il s'agit d'un système d'indices par industrie ayant trait aux genres d'achats de matériel des établissements qui font partie des industries définies dans la Classification type des industries de 1960.

The base-weighted indexes give an estimate of how much more, or less, it would cost today to purchase a group of machines specified for a particular base period.

The interim time base for the indexes is 1968=100 and most of the data from which weighting patterns were derived came from 1968 or nearby years. Such data were usually supplied by major purchasers.

Conceptually purchasers' prices should be utilized in such indexes but because of a number of practical problems, manufacturers' selling prices were usually used. Such prices were then corrected as relevant for duty, exchange and federal sales tax.

Foreign prices utilized in the index are either U.S. Bureau of Labour Statistics commodity indexes or Prices Division collections from manufacturers most of whom reside in the United States.

The first industry index was released mid-1971 and related to purchases by the construction industry. Indexes for other industries will be released from time to time as they become available. In the interim preliminary indexes for a number of other industries are available on request. Certain commodity indexes which exclude adjustments for exchange, duty and federal sales tax can also be provided on request.

Les indices pondérés en fonction de la base donnent une estimation de la différence du prix d'achat d'un groupe de machines déterminé pour une période de base donnée.

La base provisoire pour les indices est 1968=100. La plupart des données dont on a extrait les facteurs de pondération dataient de 1968 environ. D'habitude, ces données étaient fournies par les principaux acheteurs.

Du point de vue conceptuel, on devrait utiliser les prix des acheteurs dans ce genre d'indices, mais on a habituellement employé les prix de vente de fabricants pour des questions d'ordre pratique. On a ensuite apporté à ces prix les corrections appropriées pour les droits de douane, le change et la taxe de vente fédérale.

Les prix étrangers utilisés dans l'indice sont les indices de prix des marchandises du *U.S. Bureau of Labour Statistics* ou ceux que la Division des prix a recueillis auprès des fabricants dont la majorité réside aux États-Unis.

Le premier indice par industrie a été publié au milieu de 1971; il se rapporte aux achats de l'industrie de la construction. Les indices des autres industries seront publiés de temps à autre, à mesure qu'ils seront disponibles. En attendant, on peut obtenir sur demande les indices préliminaires pour un certain nombre d'autres industries. Il en est de même pour certains indices de prix de marchandises, compte non tenu des ajustements pour le change, les droits de douane et la taxe de vente fédérale.

SYMBOLS

The following standard symbols are used in Statistics Canada publications:

- . . Figures not available.
- . . . Figures not appropriate or not applicable.
- Nil or zero.
- — Amount too small to be expressed.
- p Preliminary figures.
- r Revised figures.
- x Confidential to meet secrecy requirements of the Statistics Act.

SIGNES CONVENTIONNELS

Les signes conventionnels suivants sont employés uniformément dans les publications de Statistique Canada:

- . . Nombres indisponibles.
- . . . N'ayant pas lieu de figurer.
- Néant ou zéro.
- — Nombres infimes.
- p Nombres provisoires.
- r Nombres rectifiés.
- x Confidentiels en vertu des dispositions de la Loi sur la Statistique relatives au secret.

NOTES ON PRICES AND PRICE INDEX NUMBERS

Industry Selling Price Index: Manufacturing (1961 = 100)

The industry selling price index (Total Manufacturing) rose 0.8% in September to 177.3 from the August index of 175.9. It was 20.0% higher than the September 1973 index of 147.7.

In terms of the relative contribution to the overall change in the total manufacturing index, the more notable changes were increases recorded in the food and beverages group where the sugar refining industry advanced (6.8%) and the bakeries group (4.0%). Higher prices reflected in the motor vehicles industry (4.7%) were responsible for the advances in the transportation equipment group of (3.6%). Increases were also evident in the paper and allied industries group where pulp and paper mills moved up (1.6%).

Decreases were evident in the wood products group with sawmills and planing mills showing lower level (-2.8%) and in the primary metals group with smelting and refining down (-1.5%).

NOTES SUR LES PRIX ET LES INDICES DE PRIX

Indice des prix de vente dans l'industrie: Industries manufacturières (1961 = 100)

L'indice des prix de vente dans l'industrie (ensemble des industries manufacturières) a augmenté de 0.8%, passant de 175.9 en août à 177.3 en septembre. Il a progressé de 20.0% par rapport à son niveau de septembre 1973 (147.7).

En ce qui concerne l'apport relatif des groupes à la variation globale de l'indice des industries manufacturières les variations les plus appréciables ont été observées dans le groupe des aliments et boissons puisque les raffineries de sucre et le groupe des pâtisseries ont progressé respectivement de 6.8% et 4.0%. La hausse des prix des véhicules automobiles (4.7%) a été à l'origine de l'augmentation de 3.6% du groupe matériel de transport. Des hausses ont également été enregistrées dans le groupe des industries du papier et activités connexes notamment en ce qui concerne l'industrie des pâtes et papiers (1.6%).

Des baisses ont été enregistrées dans le cas du groupe des produits du bois, notamment dans les scieries et les ateliers de rabotage (-2.8%), et dans le groupe de la première transformation des métaux, en particulier pour la fonte et l'affinage (-1.5%).

General Wholesale Index (1935-39=100)

The general wholesale index rose 0.4% to 470.7 from the revised August index of 469.0. It was 17.4% higher than a year earlier. Six of the eight major group indexes increased while two declined. The iron products group index increased 1.5% to 461.5 from the revised August index of 454.6, the index reflected price increases for total tinplate and galvanized sheets (3.8%). The chemical products group index rose 1.4% to 343.3 from the revised August index of 338.7 on higher prices for total soap and detergents. An advance of 0.5% to 506.1 from the revised August index of 503.1 in the animal products group reflected price movements for milk and its products, cured meats and hides and skins. Advances of a lesser degree were recorded in three major indexes, vegetable products 0.4% to 484.3 from the revised index of 482.2, non-metallic minerals 0.3% to 349.8 from the revised index of 348.7 and wood products 0.2% to 578.8 from the revised August index of 577.6.

The non-ferrous metals group index declined 1.1% to 424.2 from the revised August index of 429.1. A moderate decrease was recorded in the textile products group index.

Indice général des prix de gros (1935-39=100)

L'indice général des prix de gros a augmenté de 0.4% passant de 469.0 en août (indice rectifié) à 470.7. Il s'agit d'une augmentation de 17.4% par rapport à l'an dernier. Sur les huit groupes principaux, six ont augmenté tandis que deux ont diminué. L'indice des produits du fer est passé de 454.6 en août (indice rectifié) à 461.5 en raison des hausses de l'ensemble des tôles d'étain et des feuilles galvanisées (3.8%). L'indice des produits chimiques a progressé de 1.4%, passant de 338.7 en août (indice rectifié) à 343.3 en raison de la hausse des prix du savon et des détergents. Les mouvements des prix du lait et de ses dérivés, de la viande salée, du cuir et des peaux se sont traduits par une progression de 0.5% de l'indice des produits d'origine animale qui est passé de 503.1 en août à 506.1 (indice rectifié), soit une hausse de 0.5%. Des progressions moindres ont été observées dans le cas de trois indices soit celui des produits d'origine végétale, qui est passé de 482.2 (indice rectifié) à 484.3 (0.4%), celui des minéraux non métalliques, de 348.7 (indice rectifié) à 349.8, et celui des produits du bois, de 577.6 (indice rectifié d'août) à 578.8.

L'indice des métaux non ferreux a diminué de 1.1% passant de 429.1 (indice rectifié) en août à 424.2. L'indice des textiles s'inscrit en baisse modérée.

* These indexes are preliminary. - Ces indices sont provisoires.

Security Price Indexes (1961=100)

The common stock prices index decreased 10.1% in September to 135.0. Among the three major groups, industrials declined 11.2% to 142.2, utilities 7.3% to 109.4 and finance 7.4% to 137.0. The thirteen industrials sub-groups registered losses ranging from 8.9% for food (137.3) to 15.2% for construction industry stocks (115.3). Decreases were registered for the five utilities sub-groups: telephone companies stock prices recorded the lightest decrease with 2.4% to 147, while electric power stock index recorded the greatest loss for utilities, 11.9%, to 74.1. The decrease in the finance index resulted from losses of 7.0% in banks (165.3) and 8.3% in investments and loans (91.5).

During the same period, the index of stock prices in mining decreased 21.3% to 112.8 as gold and base metals moved down respectively 27.3% and 11.7% to 182.3 and 157.7.

In the case of the two supplementary indexes, uranium registered a decrease of 13.8% to 220.4 while primary oil and gas decreased 18.3% to 247.3.

The preferred stock index moved down 5.9% to 55.5 in September from 59.0 in August.

Canadian Farm Products Index (1935-39=100)

The price index of Canadian farm products at terminal markets declined 2.3% to 508.3 in September from the revised August index of 520.2. The field products index increased 4.2% to 444.1 from the revised index of 463.8 due to lower prices on both markets for potatoes and rye, and for barley in the East. Price increases were shown for hay on both Eastern and Western markets, for corn in the East, and for wheat in the West.

The animal products index declined 0.7% to 572.5 from the revised index of 576.7, reflecting lower prices for raw wool and calves in the West, for lambs and eggs in the East and for steers on both markets. Higher prices were shown for lambs in the West, for calves and butterfat in the East, and for hogs on both markets. Price increases were shown for poultry and cheesemilk in the East, and for fluid milk and eggs in the West.

Thirty Industrial Materials Index (1935-39=100)

The price index of thirty industrial materials, calculated as an unweighted geometric average, increased 0.6% to 511.1 in September from the revised August index of 508.0. Prices were higher for fourteen commodities, lower for five and unchanged for eleven. Principal changes included increases for raw sugar, rosin, hogs, sisal, linseed oil, beef hides, steel sheets, raw cotton, bleached sulphite pulp and domestic wheat. The most notable decreases were spruce lumber, raw wool and raw rubber, followed by steers and tin.

Indices des cours des valeurs mobilières (1961=100)

L'indice des cours des actions ordinaires a diminué de 10.1% en septembre, pour s'inscrire à 135.0. Parmi les trois grands groupes, les valeurs industrielles ont enregistré une perte de 11.2% pour s'établir à 142.2, les services publics accusent une baisse de 7.3% pour se fixer à 109.4 et les finances ont perdu 7.4% pour marquer 137.0. Les treize sous-groupes des valeurs industrielles ont enregistré une perte variant de 8.9% pour les aliments (137.3), à 15.2% pour les actions de l'industrie de la construction (115.3). Les cinq sous-groupes des services publics sont aussi à la baisse: les valeurs des compagnies téléphoniques ont enregistré la plus faible diminution, 2.4%, pour se fixer à 84.7, alors que les actions de l'énergie électrique enregistreraient la perte la plus importante des services publics, soit 11.9% pour se fixer à 74.1. La baisse de l'indice des finances est attribuable aux pertes de 7.0% de l'indice bancaire (165.3), et de 8.3% des valeurs des placements et des prêts (91.5).

Au cours de la même période, l'indice des prix des titres miniers a diminué de 21.3% pour s'établir à 112.8, à la suite d'une perte de 27.3% des aurifères qui s'inscrivent à 182.3 et à une baisse de 11.7% des métaux communs qui se sont fixés à 75.7.

Pour ce qui est des deux indices de prix supplémentaires, on a observé une diminution de 13.8% dans le cas de l'uranium qui s'est fixé à 220.4, alors que le pétrole et le gaz primaires accusaient une baisse de 18.3% et tombaient à 247.3.

L'indice des actions privilégiées a diminué de 5.9% tombant de 59.0 en août à 55.5 en septembre.

Indice des prix des produits agricoles canadiens (1935-39=100)

L'indice des prix des produits agricoles canadiens sur les marchés terminaux a diminué de 3.3%, passant de 520.2 (indice rectifié) en août à 508.3 en septembre. L'indice des produits de grande culture est passé de 463.8 (indice rectifié) à 444.1, soit une diminution de 4.2%, en raison de la baisse sur les deux marchés du prix des pommes de terre et du seigle, et de celui de l'orge dans l'est. Le prix du foin sur les marchés de l'est et de l'ouest, du maïs dans l'est et du lin dans l'ouest a augmenté.

L'indice des prix des produits d'origine animale a diminué de 0.7%, passant de 576.7 (indice rectifié) à 572.5; cette diminution est attribuable à la baisse du prix de la laine brute et des veaux dans l'ouest, des agneaux et des oeufs dans l'est, et des bouvillons sur les deux marchés. Il y a eu des hausses du prix des agneaux dans l'ouest, des veaux et des matières grasses dans l'est, et des porcs sur les deux marchés. Le prix de la volaille et du lait de fromagerie a augmenté dans l'est, et celui du lait de consommation et des oeufs, dans l'Ouest.

Indice des prix de trente matières industrielles (1935-39=100)

L'indice des prix de trente matières industrielles, calculé comme une moyenne géométrique non pondérée, a augmenté de 0.6%, passant de 508.0 en août (indice rectifié) à 511.1 en septembre. Les prix de quatorze marchandises ont augmenté, ceux de cinq ont baissé et ceux de onze sont demeurés inchangés. Les principales variations comprennent des hausses du prix du sucre brut, de la résine, des porcs, du sisal, de l'huile de lin, des peaux de boeufs, des feuilles d'acier, du coton brut, de la pâte au sulfite blanchie et du blé canadien. Les baisses de prix les plus appréciables ont été observées dans le cas du bois d'épinette, de la laine brute et du caoutchouc brut, ainsi que des bouvillons et de l'étain.

Farm Input Price Index (1961=100) Third Quarter 1974

The Farm Input Price Index for Canada increased 3.0% in the 3rd quarter 1974 moving to 195.2 from 189.6 in the 2nd quarter. The eastern index moved up to 199.7 from its 2nd quarter level of 193.7, an increase of 3.1%. The western index rose 2.8% moving to 190.0 from a revised 2nd quarter level of 184.9. The Canada index was 12.6% higher than its 3rd quarter 1973 level, the eastern index was up 10.9%, while the western index rose 14.7% over the same period.

Higher prices for motor operation items, livestock feed, labour, farm machinery, fertilizer and custom work caused most of the increase in the index.

Consumer Price Movements

The Consumer Price Index for Canada (1961=100) rose 0.6% to 170.6 in September from 169.6 in August as all main components registered increases. About two-fifths of the overall advance was attributable to a 0.7% rise in Housing. The Food index, despite seasonally lower fresh produce prices and a decline in the price of beef, increased by 0.4%. The Clothing component moved up 1.1%. The Recreation, Education and Reading element rose 0.6% while that for Transportation edged up 0.2%. Tobacco and Alcohol prices averaged 0.3% higher and those for Health and Personal Care went up 0.4%. In the latest month the price level of All-Items other than Food rose 0.6%. Between September 1973 and September 1974, the All-Items Index advanced 10.9%.

The Food index increased 0.4% to 193.6 in September from 192.8 in August with about half of the rise being attributable to a 1.2% advance in the price of food eaten away from home. The price level of food for home consumption moved up 0.3% despite seasonal declines for fresh produce and a fall in the beef index. Fresh vegetable and fruit prices declined by 21.2% and 4.7%, respectively, from the preceding month. In contrast, prices of processed vegetables and fruit continued their advance, moving up 3.3% and 1.0%, respectively, in the latest month to levels some 20% above a year earlier. A drop of 3.2% in beef prices largely offset increases of 6.1% and 3.7% in the pork and poultry indexes, respectively, in the latest month. In marked contrast to most other major elements of the food at home index over the twelve-month period since September 1973, the combined meat, poultry and fish component showed no retail price increase. Led by a one-month advance of 9.4% in butter prices, the dairy products index climbed 2.0% between August and September. Generally higher prices for margarine and salad dressing moved the fats and oils index up by 6.2% in the latest month to a level over 57% above a year earlier. Egg prices on average, remained relatively unchanged for the fourth consecutive month. Among other food items sugar prices rose a further 17.6% in the latest month to

Indices (1961=100) des prix des entrées dans l'agriculture, troisième trimestre de 1974

L'indice Canadien des prix des entrées dans l'agriculture a augmenté de 3.0% au cours du troisième trimestre de 1974 pour atteindre 195.2, comparativement à 189.6 au deuxième trimestre. L'indice pour l'Est est passé de 193.7 au deuxième trimestre 199.7, soit une augmentation de 3.1%. L'indice pour l'Ouest a augmenté de 2.8%, passant de 184.9 (indice rectifié du deuxième trimestre) à 190.0. L'indice pour le Canada au troisième trimestre dépassait de 12.6% l'indice correspondant pour 1973; au cours de la même période, l'indice pour l'Est a progressé de 10.9%, l'indice pour l'Ouest, de 14.7%.

Cette progression de l'indice est principalement attribuable à la hausse du coût de l'utilisation des véhicules automobiles, des aliments pour le bétail, de la main-d'oeuvre, des machines agricoles, de l'engrais et du travail sur commande.

Mouvements des prix à la consommation

L'indice des prix à la consommation au Canada (1961=100) a augmenté de 0.6% en septembre, pour passer à 170.6 comparativement à 169.6 en août, avec des augmentations de tous les principaux éléments. Environ deux cinquièmes de l'augmentation totale étaient dus à l'augmentation de 0.7% de l'élément Habitation. L'indice des aliments, malgré la baisse normale des prix des produits frais en cette saison et en dépit de la baisse du prix du boeuf, a augmenté de 0.4%. L'élément Habillement a augmenté de 1.1%. L'indice des Loisirs, formation et lecture a augmenté de 0.6% tandis que l'élément Transport connu une hausse de 0.2%. Les prix des Tabacs et alcools ont augmenté en moyenne de 0.3% et ceux de l'élément Hygiène et soins personnels de 0.4%. Au cours du mois dernier, le niveau du prix de l'ensemble de l'indice (sauf l'élément Aliments) a augmenté de 0.6%. Entre septembre 1973 et septembre 1974, l'indice d'ensemble a augmenté de 10.9%.

L'indice des aliments a augmenté de 0.4%, pour passer à 193.6 en septembre comparativement à 192.8 en août; environ la moitié de la hausse est attribuable à l'augmentation de 1.2% du prix des repas pris au restaurant. Le niveau des prix des aliments consommés à la maison a augmenté de 0.3%, malgré les baisses normales pour la saison, des produits frais et malgré la baisse de l'indice du boeuf. Les prix des légumes et fruits frais ont diminué respectivement de 21.2% et 4.7% par rapport au mois précédent. Par contre, les prix des légumes et fruits en conserve ont continué de monter avec des augmentations respectives de 3.3% et 1.0% au mois dernier, soit des augmentations approximatives de 20% par rapport à l'année précédente. La baisse de 3.2% du prix du boeuf a largement compensé les hausses de 6.1% et 3.7% respectivement des prix du porc et de la volaille, le mois dernier. En contraste avec les autres principaux éléments de l'indice des aliments consommés à la maison, on constate que l'élément viande-poisson-volaille n'a pas connu d'augmentation au niveau des prix de détail depuis septembre 1973. A cause de l'augmentation de 9.4% du prix du beurre en un mois, l'indice des produits laitiers est monté de 2.0% entre août et septembre. Les prix généralement plus élevés de la margarine et des vinaigrettes ont fait grimper l'indice des graisses et huiles de 6.2% le mois dernier, soit une hausse de 57% par rapport à l'année précédente. Les prix des oeufs, en moyenne, est resté relativement le même qu'au cours

more than triple since a year ago. Between September 1973 and September 1974, the total Food index moved up 13.8%, with the price of food consumed at home rising 13.0% and that for food away from home 18.1%.

The Housing index advanced 0.7% to 169.2 in September from 168.0 in August mainly as a result of an increase of 1.3% in the household operation component. The shelter element edged up 0.3% in reflection of higher indexes for mortgage interest and rent. Among household operation items, increases were recorded for appliances, furniture, floor coverings, linen and draperies. Higher prices for stationery, garbage bags and cleaning supplies contributed to a rise in the household supplies index, while increased telephone rates in Quebec and Ontario and generally higher appliance repair charges moved up the household services index. In the latest twelve months, the Housing index rose 9.6%.

The Clothing index rose 1.1% to 155.0 in September from 153.3 in August. Almost a third of this increase was attributable to a 3.1% advance in clothing service charges as higher prices were recorded for laundry, dry-cleaning and shoe repairs in a number of centres. The men's and the women's wear indexes rose 1.3% and 0.7%, respectively, as most items surveyed registered advances. The piece goods and the children's clothing indexes each rose 1.0% and footwear prices advanced 0.5%, on average. The Clothing index was 11.1% higher than a year earlier.

The Transportation index rose 0.2% to 153.7 in September from 153.3 in August mainly on account of higher tire and new car prices. Though motor oil prices rose in a number of centres, gasoline prices, on average, fell marginally for the third consecutive month. In the twelve months to September 1974, the Transportation index rose 10.1%.

The Health and Personal Care index moved up 0.4% to 173.0 in September from 172.4 in August as a result of higher prices for pharmaceuticals and personal care supplies. Among pharmaceuticals, price increases were recorded for both prescribed and non-prescribed medicines. Most toiletry items also registered increases with prices of toilet soap and cleansing tissues, respectively, reaching levels nearly 40% and 5% above a year earlier. In the latest twelve months, the Health and Personal Care index rose 9.6%.

The Recreation, Education and Reading index moved up 0.6% to 162.9 in September from 162.0 in August largely as a result of increased prices for magazines. Among recreation items, higher charges were registered for television repairs, phonograph records, boats and motors. Partially offsetting these advances the price of television and stereo sets edged down slightly. The Recreation, Education and

des quatre mois précédents. Parmi les autres éléments de l'indice des aliments, le prix du sucre a encore augmenté soit de 17.6% le mois dernier pour atteindre un niveau trois fois supérieur à celui de l'année précédent. Entre septembre 1973 et septembre 1974, l'indice total des aliments a augmenté de 13.8%, avec des augmentations respectives de 13.0% et 18.1% pour les aliments consommés à la maison et les repas prix au restaurant.

L'indice de l'habitation a augmenté de 0.7% pour passer à 169.2 en septembre comparativement à 168.0 en août, essentiellement à cause de l'augmentation de 1.3% de l'élément dépenses du ménage. L'élément logement a augmenté de 0.3%, à la suite de l'augmentation des indices des loyers et des intérêts d'hypothèque. Dans l'élément dépenses du ménage, on a noté des augmentations des prix des appareils ménagers, des meubles, des revêtements de sol, du linge et des rideaux. Les augmentations de prix des articles de papeterie, des sacs à poubelle et des articles de nettoyage ont contribué à l'augmentation de l'indice des articles ménagers, tandis que les hausses des tarifs téléphoniques au Québec et en Ontario et les tarifs généralement plus élevés de réparation des appareils ont fait monter l'indice des services au ménage. Au cours de douze derniers mois, l'indice de l'habitation a augmenté de 9.6%.

L'indice de l'habillement a augmenté de 1.1% pour passer à 155.0 en septembre comparativement à 153.3 en août. Près d'un tiers de cette hausse est dû à l'augmentation de 3.1% des services vestimentaires plus précisément à la suite des hausses des tarifs de blanchissage, de nettoyage à sec et de réparation des chaussures dans bon nombre de centres urbains. Les indices de vêtements pour hommes et pour femmes ont augmenté respectivement de 1.3% et 0.7% à la suite des augmentations générales de ces articles. Les indices des tissus à la verge et des vêtements pour enfants ont augmenté chacun de 1.0% et l'indice des chaussures a augmenté, en moyenne, de 0.5%. L'indice de l'habillement a augmenté de 11.1% par rapport à l'année précédente.

L'indice des transports a augmenté de 0.2%, pour passer à 153.7 en septembre comparativement à 153.3 en août, à cause surtout des augmentations des prix des pneus et des voitures neuves. Bien que les prix de l'huile à moteur aient augmenté dans un certain nombre de villes, les prix de l'essence ont en moyenne, baissé de façon marginale pour le troisième mois consécutif. Depuis septembre 1973, l'indice des transports a augmenté de 10.1%.

L'indice de l'Hygiène et soins personnels a augmenté de 0.4%, pour passer à 173.0 en septembre comparativement à 172.4 en août, à la suite des hausses des prix des produits pharmaceutiques et de soins personnels. Parmi les produits pharmaceutiques, on a enregistré des augmentations des prix des médicaments avec et sans ordonnance. Le plupart des articles de toilette ont également augmenté, avec en particulier des augmentations de près de 40% et 25% des prix du savon et du papier-mouchoir par rapport à l'année précédente. Au cours des douze derniers mois, l'indice de l'Hygiène et soins personnels a augmenté de 9.6%.

L'indice des Loisirs, formation et lectures a augmenté de 0.6%, pour passer à 162.9 en septembre comparativement à 162.0 en août, essentiellement à la suite des hausses des prix des magazines. Parmi les articles de loisirs, on a enregistré des hausses des tarifs de réparation des téléviseurs, et des prix des disques, des bateaux et des moteurs. Les prix des appareils de télévision et des appareils stéréo ont légèrement baissé, compensant en partie ces

Reading index stood 10.7% above its level of twelve months previous.

The Tobacco and Alcohol index rose 0.3% to 145.5 in September from 145.0 in August. Most of the increase was attributable to higher liquor prices in Quebec, Manitoba and some of the Atlantic Provinces. In the latest twelve months, the Tobacco and Alcohol index moved up 6.5%.

Consumer price movements, reclassified by goods and services offer another view of the incidence of price change. Between August and September, the total goods index advanced 0.7% with the largest increase being recorded for semi-durable goods which rose 1.1% mainly in response to higher clothing and footwear prices. The index for non-durable goods rose 0.5% largely in response to higher quotations for food, domestic and health and personal care supplies: the component for durable goods advanced 0.8% mainly because of higher appliance and furniture prices. A rise of 0.4% was recorded for the services index following increases in most service components. In the twelve months to September 1974, the total goods index advanced 12.2% and that for services 8.5%.

augmentations. Au cours des douze derniers mois, l'indice de Loisirs, formation et lecture a augmenté de 10.7%.

L'indice des Tabacs et alcools a augmenté de 0.3%, pour passer à 145.5 en septembre comparativement à 145.0 en août. L'essentiel de la hausse était dû à l'augmentation des prix des alcools au Québec, au Manitoba et dans certaines provinces de l'Atlantique. Au cours des douze derniers mois, l'indice des Tabacs et alcools a augmenté de 6.5%.

Les mouvements des prix à la consommation, reclassés selon les biens et services, présentent un autre aperçu des effets des variations de prix. Entre août et septembre, l'indice total des biens a augmenté de 0.7%, en raison surtout d'augmentations des biens semi-durables qui ont monté de 1.1%, à la suite des hausses des prix de vêtements et des chaussures. L'indice des biens non durables a augmenté de 0.5%, surtout à la suite des hausses des prix des aliments, des articles ménagers et des articles de santé et de soins personnels; l'indice des biens durables a augmenté de 0.8%, à la suite de la hausse des prix des appareils ménagers et des meubles. On a enregistré une augmentation de 0.4% de l'indice des services, résultant d'augmentations de la plupart des éléments de cet indice. Au cours des douze mois se terminant en septembre 1974, l'indice total des biens a augmenté de 12.2% et celui des services de 8.5%.

Beverages - Boissons	169.1	187.9	259.6	259.8	- 10.0	- 0.1	- 34.9
Textiles and clothing - Textiles et vêtements	133.0	155.2	152.6	152.4	- 14.3	0.1	- 12.8
Pulp and paper - Pâte et papier	107.4	124.1	154.2	141.3	- 13.5	9.1	- 30.4
Printing and publishing - Impression et édition	283.0	318.7	365.6	369.9	- 11.2	- 1.2	- 22.6
Primary metals - Métaux primaires	107.8	122.6	127.7	126.7	- 12.1	0.8	- 15.6
Metal fabricating - Fabrications des métaux	145.2	163.8	215.4	215.6	- 11.4	- 0.1	- 32.6
Non-metallic minerals - Minéraux non métalliques	128.4	148.5	176.1	181.0	- 13.5	- 2.7	- 27.1
Petroleum - Pétrole	201.1	224.9	345.0	337.3	- 10.6	2.3	- 41.7
Chemicals - Produits chimiques	115.9	130.1	112.2	110.7	- 10.9	1.4	3.3
Construction - Construction	115.3	136.0	153.1	153.5	- 15.2	- 0.3	- 24.7
Retail trade - Commerce de détail	116.2	129.5	150.6	154.1	- 10.3	- 2.3	- 22.8
Utilities - Total - Services publics	109.4	118.0	137.4	138.6	- 7.3	- 0.9	- 20.4
Pipeline - Pipe-line	96.1	108.0	137.0	140.7	- 11.0	- 2.6	- 29.9
Transportation - Transport	236.6	256.6	319.9	329.2	- 7.8	- 2.8	- 26.0
Telephone - Téléphone	84.7	86.8	82.4	83.2	- 2.4	- 1.0	- 2.8
Electric power - Énergie électrique	74.1	84.1	110.8	105.8	- 11.9	4.7	- 33.1
Gas distribution - Distribution du gaz	130.3	137.2	147.1	147.4	- 5.0	- 0.2	- 11.4
Finance - Total - Finances	137.0	147.9	181.3	178.2	- 7.4	1.7	- 24.4
Banks - Banques	165.3	177.8	214.8	210.8	- 7.0	1.9	- 23.0
Investment and loan - Placements et prêts	91.5	99.8	128.6	127.1	- 8.3	1.2	- 28.8
<u>Mining - Actions minières</u>							
Mining index - Total - Indices des prix des titres minières	112.8	143.3	131.4	137.1	- 21.3	- 4.2	- 14.2
Gold - Or	182.3	250.7	157.7	170.3	- 27.3	- 7.4	15.6
Base metals - Métaux communs	75.7	85.7	118.1	120.1	- 11.7	- 1.7	- 35.9
<u>Supplementary indexes - Indices supplémentaires</u>							
Uranium - L'uranium	220.4	255.6	239.4	249.6	- 13.8	- 4.1	- 7.9
Primary oils and gas - Pétrole et gaz primaires	247.3	302.6	454.4	462.2	- 18.3	- 1.7	- 45.6

- (1) Gross weighted, including inter-industry shipments. For explanation see page 88. - Indice pondéré brut comprenant les livraisons inter-industrielles. Pour toute explication, voir page 88.
- (2) Indexes for 1973 and 1974 are subject to revision. - Les indices pour 1973 et 1974 sont sujets à révision.
- (3) Year to year percentage change not shown since these indexes are not comparable. Indexes subsequent to July 1973 are subject to revision. See notes page 89 for details of Western grain prices. - La variation proportionnelle d'une année à l'autre n'est pas indiquée étant donné que ces indices ne sont pas comparables. Les indices postérieurs à juillet 1973 sont sujets à révision. Voir les renvois de la page 89 pour les prix détaillés des grains de l'Ouest.

	1974	156.8	159.3	162.2	165.5	167.9	169.9	173.1	175.9	177.3				

(1) Indexes for 1972, 1973 and 1974 are subject to revision. - Les indices pour 1972, 1973 et 1974 sont sujets à révision.

(2) This industry was changed in commodity content, price sample and weights in accordance with significant changes within the industry. Figures are revised from January 1971 to date. - La composition en marchandises, les échantillons de prix et les mesures de poids ont changé dans cette industrie conformément à des changements importants survenus dans l'industrie même. Les chiffres sont révisés de janvier 1971 à aujourd'hui.

(3) Effective January 1973 changes have been made in the calculation of this index. For details see page 88. - À compter de janvier 1973, on a modifié le calcul de cet indice. Pour plus de détails, voir la page 88.

(4) An extensive revision of the weight and price sample (including the incorporation of goods purchased and resold in same condition as purchased) necessitated by developments in the industry's production pattern since 1961 have resulted in the introduction of new price indexes and a discontinuity in the industry price index. - Une révision approfondie de l'échantillon des pondérations et des prix (y compris l'intégration des biens achetés et revendus sans aucune modification), nécessitée par l'évolution du régime de production de l'industrie depuis 1961, a amené l'adoption de nouveaux indices des prix ainsi qu'une solution de continuité dans l'indice des prix industriels.

	Old Series - Ancienne série	New series - Nouvelle série
December - 1970 - Décembre	95.1	92.3
January - 1971 - Janvier	95.1	92.1
Average - 1971 - Moyenne	95.2	91.8

(5) This series has been revised from January 1969 forward. An expanded list of establishments and commodities has been selected and prices for these have been aggregated to a total industry index using 1971 shipments data. The price quotations are, in general, of an improved quality. Selected commodity data on a 1971 time and weight base, are available on request. - Les chiffres de cette série ont été révisés à partir de janvier 1969. Une liste augmentée des établissements et des produits a été établie, et les prix de ces produits ont été agrégés pour former un indice total de l'activité économique à partir des données sur les livraisons de 1971. De manière générale, le calcul des prix est plus fiable. Les utilisateurs peuvent obtenir sur demande des données sur certains produits utilisant les facteurs de pondération de 1971 et dont la période de référence est 1971.

(6) Motor gasoline prices are 'List' and may not be a reflection of actual transaction prices. - Les prix de l'essence sont des prix de détail suggérés et peuvent ne pas traduire les prix réels à la transaction.

(7) Gross weighted, including inter-industry shipments. For explanation see page 88. - Indice pondéré brut comprenant les livraisons inter-industrielles. Pour toute explication voir page 88.

(1) All indexes for 1973 and 1974 are subject to revision. - Les indices pour 1973 et 1974 sont sujets à révision

(2) Includes gold. - Y compris l'or

(3) Consists of iron products and non-ferrous metals groups above but excluding gold. - Se compose des groupes élémentaires des produits du fer et des produits des métaux non ferreux moins l'or

(4) These two series comprise the General Wholesale Index. - Ces deux séries comprennent l'indice général de gros

ALL-ITEMS Consumer Price Index Converted to 1949=100 - September 1974 - L'indice des prix à la consommation de tous les éléments converti à 1949=100 - Septembre 1974 220.4

(1) Indexes prior to May 1973 incorporate 1957 expenditure weights, those for May 1973 forward are based on 1967 expenditures. The revised series is linked to its predecessor at April 1973. For further explanation, see page 92. - Avant mai 1973 les indices étaient calculés à l'aide des pondérations fondées sur les dépenses de 1957; à partir de mai 1973 ils sont calculés à l'aide des pondérations fondées sur les dépenses de 1967. Les séries révisées sont raccordées aux précédentes en avril 1973. Pour plus de renseignements, voir page 92.

Recreation, education, and communication services - Loisirs, formation et communications	161.6	160.5	152.0	151.6	151.2	144.7	137.9
Transportation services - Transports	199.7	199.4	182.8	181.8	179.2	174.8	168.1

(1) Indexes prior to May 1973 incorporate 1957 expenditures weights, those for May 1973 forward are based on 1967 expenditures. The revised series is linked to its predecessor at April 1973. For further explanation see page 92. - Avant mai 1973 les indices étaient calculés à l'aide des pondérations fondées sur les dépenses de 1957; à partir de mai 1973 ils sont calculés à l'aide des pondérations fondées sur les dépenses de 1967. Les séries révisées sont raccordées aux précédentes en avril 1973. Pour plus de renseignements, voir page 92.

(2) Excludes accessories and notions. - Ne comprend pas les accessoires et menus articles.

(3) Includes clothing accessories and notions. - Comprend les accessoires et menus articles vestimentaires.

(4) Includes constant weighted food component. - Comprend l'élément aliments calculé à l'aide de pondérations constantes.

TABLE 11. Consumer Price Indexes, Regional Cities(1)

TABLEAU 11. Indices des prix à la consommation, agglomérations urbaines(1)

1961=100

Note: (i) These indexes measure within each city the percentage change in consumer prices from the base period to the subsequent time periods. They cannot be used to compare levels of prices between cities. (ii) For inter-city indexes of retail price differentials refer to Table 14. - Nota: (i) Les indices mesurent dans chaque ville le pourcentage de variation des prix à la consommation depuis la période de base jusqu'à des périodes subséquentes. Ils ne peuvent servir à comparer les niveaux des prix d'une ville à l'autre. (ii) Pour les indices comparatifs des prix de détail, se reporter au tableau 14.

(1) Indexes prior to May 1973 incorporate 1957 expenditure weights, those for May 1973 forward are based on 1967 expenditure. The revised series is linked to its predecessor at April 1973. For further explanation, see page 92. - Avant mai 1973 les indices étaient calculés à l'aide des pondérations fondées sur les dépenses de 1957; à partir de mai 1973 ils sont calculés à l'aide des pondérations fondées sur les dépenses de 1967. Les séries révisées sont raccordées aux précédentes en avril 1973. Pour plus de renseignements, voir page 92.

(2) Until April 1973, the shelter element of regional cities' housing indexes moved on the basis of changes in rents only. However, from May 1973 on, homeownership has been included in the shelter element of regional cities' housing indexes, so that the Canada and regional city shelter indexes now contain the same elements. See also page 93. - Jusqu'en avril 1973, l'élément logement des indices de l'habitation des agglomérations urbaines était basé uniquement sur les variations des loyers. Toutefois, depuis mai 1973, les frais de possession d'une maison ont été incorporés à l'élément logement des indices de l'habitation des agglomérations urbaines; il en résulte que les indices du logement pour le Canada et pour les agglomérations urbaines comportent maintenant les mêmes éléments. Voir aussi la page 93.

(3) Includes shelter and household operation. Until April 1973, the shelter element of regional cities' housing indexes moved on the basis of changes in rents only. However, from May 1973 on, homeownership has been included in the shelter element of regional cities' housing indexes, so that the Canada and regional city shelter indexes now contain the same elements. See also page 93. - Comprend le logement et l'entretien du ménage. Jusqu'en avril 1973, l'élément logement des indices de l'habitation des agglomérations urbaines était basé uniquement sur les variations des loyers. Toutefois, depuis mai 1973, les frais de possession d'une maison ont été incorporés à l'élément logement des indices de l'habitation des agglomérations urbaines; il en résulte que les indices du logement pour le Canada et pour les agglomérations urbaines comportent maintenant les mêmes éléments. Voir aussi la page 93.

- (1) Indexes prior to May 1973 incorporate 1964 expenditure weights, those for May 1973 forward are based on 1967 expenditures. The revised series is linked to its predecessor at April 1973. For further explanation, see page 92. - Avant mai 1973 les indices étaient calculés à l'aide des pondérations fondées sur les dépenses de 1964; à partir de mai 1973 ils sont calculés à l'aide des pondérations fondées sur les dépenses de 1967. Les séries révisées sont raccordées aux précédentes en avril 1973. Pour plus de renseignements, voir page 92.
- (2) Includes shelter and household operation. Until April 1973, the shelter element of regional cities housing indexes moved on the basis of changes in rents only. However, from May 1973 on, homeownership has been included in the shelter element of regional cities' housing indexes, so that the Canada and regional city shelter indexes now contain the same elements. See also page 93. - Comprend le logement et l'entretien du ménage. Jusqu'en avril 1973, l'élément logement des indices de l'habitation des agglomérations urbaines était basé uniquement sur les variations des loyers. Toutefois, depuis mai 1973, les frais de possession d'une maison ont été incorporés à l'élément logement des indices de l'habitation des agglomérations urbaines; il en résulte que les indices du logement pour le Canada et pour les agglomérations urbaines comportent maintenant les mêmes éléments. Voir aussi la page 93.

(1) Indexes for 1974 are subject to revision. Les indices pour 1974 sont sujets à révision.

(2) The Canada Index is the weighted average of the General Contractors and the Sub-trade Contractors Indexes as well as being the weighted average of the regional indexes. L'indice pour le Canada est la moyenne pondérée des indices des entrepreneurs généraux et sous-traitants. Il correspond également à la moyenne pondérée des indices régionaux.

- (1) Indexes for 1974 are subject to revision. - Les indices pour 1974 sont sujets à révision.
(2) From Table 18. For explanation of recent revisions see Vol 1, No. 7 of *Construction Price Statistics*, Service Bulletin 62-006. - Du tableau 18. Pour une explication des récentes révisions voir Vol 1, No. 7 du bulletin de service "Statistique des prix dans la construction" 62-006.
(3) National Income and Expenditure Accounts, Catalogue 13-001, quarterly. - (No. 13-001 au catalogue, trimestriel).
(4) Indexes for 1973 and 1974 are subject to revision. - Les indices pour 1973 et 1974 sont sujets à révision.
(5) From Table 19. For explanation of recent revisions see Vol 1, No. 10 of *Construction Price Statistics*, Service Bulletin 62-006. - Du tableau 19. Pour une explication des récentes révisions voir Vol 1, No. 10 du bulletin de service "Statistique des prix dans la construction" 62-006.
(6) This series contains an engineering component as well as a building component, and is therefore not precisely comparable in coverage with the non-residential composite index. The implicit price indexes are adjusted for changes in contractors' profit and productivity. Cette série comprend une composante génie aussi bien qu'une composante construction: elle n'a donc pas tout à fait la même portée que l'indice synthétique pour la construction non-résidentielle. Les indices synthétiques sont corrigés des variations des profits et de la productivité des entrepreneurs.

- (1) To assist comparison with other published series the indexes presented have been arithmetically converted from 1956=100 to 1961=100. The 1956=100 indexes are available on request. - Pour faciliter la comparaison avec d'autres séries publiées, ces indices ont été recalculés sur la base 1961=100. Les indices originaux (1956=100) sont disponibles.
- (2) The years refer to fiscal years. Thus 1961 refers to the period April 1, 1961 to March 31, 1962. - Années financières; par exemple, 1961 couvre la période du 1er avril 1961 au 31 mars 1962.
- (3) Major components for the provincial indexes are presented annually in *Construction Price Statistics*, Service Bulletin No. 62-006. - Les principaux éléments des indices pour les provinces sont publiés annuellement dans le bulletin de service, *Statistiques des Prix dans la Construction*, no 62-006.
- (4) Direct comparisons should not be made between this index and the highway index published by the Ontario Department of Transportation & Communications. The item content of the indexes is different. - On ne peut comparer directement cet indice avec celui de la voirie publié par le Département du transport et des communications de l'Ontario. Les éléments des deux indices sont différents.

Explanation of Methods Used and Additional Sources for Price Series

Industrial Price Indexes

Industry Selling Price Indexes (1961 = 100)

Industry selling price indexes are published for approximately 100 industries within manufacturing. Also published are approximately 425 commodity price indexes for the products of these industries. The Classification system is that of the 1960 standard industrial classification, thus permitting the joint use of price statistics with other data such as production and employment similarly classified.

The data upon which both the initial selection of commodities to be priced and responding firms are made are contained in the Census of Manufacturers, a series of annual surveys collecting statistics on shipments of commodities, employment and materials used. Prices are collected on the 15th of each month or the nearest transaction date for the commodity being priced; sales and excise taxes are excluded.

The industry classified price indexes are useful for analysis of price movements, for estimation of the constant dollar value of shipments, and for purposes of contract escalations.

A complete description of these indexes is contained in: Industry Selling Price Indexes 1956-68, Catalogue No. 62-528.

Industry Selling Price Index: Manufacturing

The index is gross weighted. It measures the movements of prices of gross shipments of manufacturing industries, including inter-industry shipments between individual industries within manufacturing. Therefore, it duplicates the movements of some prices in the sense that, for example, flour prices are given full weight as part of the shipments of the Flour Mills Industry and then are implicitly counted again through full weighting of the shipment prices of those manufacturing industries which use flour as an ingredient in their outputs, e.g., bread, biscuits, cakes, etc.

"Iron & Steel Mills:" 12-2910

The principal change in the index is as follows: From January 1973 forward prices collected from the various companies are, for any given commodity, weighted together in a way that reflects the relative importance of each company's shipments of the commodity to the total shipments of that commodity by all companies in the year 1971. In addition prices for stainless products were deleted from the series bars hot rolled etc. (12-2910-082), in September 1972 and from the series sheets and strip cold rolled etc. (12-2910-084) in October 1972. Prices for stainless products, however, are included in the price index for the iron and steel mills industry.

The concept of price change measured is net return to mill.

Explication des méthodes utilisées et sources supplémentaires des séries de prix

Indices des prix industriels

Indices des prix de vente dans l'industrie (1961 = 100)

Les indices des prix de vente dans l'industrie sont publiés pour environ 100 industries manufacturières. Près de 425 indices des prix des produits de ces industries sont également publiés. Les produits sont classés d'après la Classification type des industries de 1960, ce qui permet d'utiliser la statistique des prix avec d'autres données telles que la production et l'emploi classées de la même manière.

Les données sur lesquelles se fonde le choix initial de produits dont il faut déterminer le prix et des établissements enquêtés figurent dans le "recensement des manufactures", série de bulletins sur les enquêtes annuelles au cours desquelles est recueillie des statistiques sur les expéditions de produits, l'emploi et sur les matières utilisées. La collecte des prix a lieu le 15 de chaque mois ou à la date de transaction la plus rapprochée pour le produit en question; les taxes de vente et droits d'accise sont pas pris en compte.

Les indices des prix classés par industrie servent à analyser les mouvements de prix, à estimer la valeur des expéditions en dollars constants et à indexer les contrats.

La description complète de ces indices est donnée dans "Indices des prix de vente dans l'industrie, 1956-68", numéro 62-528 au catalogue.

Indices des prix de vente dans l'industrie: Industries manufacturières

Il s'agit d'un indice pondéré brut. Il mesure les mouvements du prix des livraisons brutes des industries manufacturières y compris les livraisons inter-industrielles des industries manufacturières. Il prend donc deux fois en compte les mouvements de certains prix: les prix de la farine, par exemple, font l'objet d'une pondération complète comme ayant trait aux livraisons de meuneries et ils sont comptés à nouveau implicitement du fait de la pondération complète des prix de livraisons des industries manufacturières qui utilisent de la farine comme ingrédient dans leurs produits, tels que le pain, les biscuits ou les gâteaux.

"Sidérurgie:" 12-2910

Le principal changement apporté à l'indice est le suivant: depuis janvier 1973, les prix recueillis auprès des différentes sociétés sont, pour tout produit, pondérés de manière à refléter l'importance relative des livraisons de chaque société par rapport aux livraisons totales de ce produit par toutes les sociétés en question. En outre, les prix des produits en acier inoxydable ont été enlevés de la série "barres, laminés à chaud, etc." (12-2910-082) en septembre 1972 et de la série "tôles et feuillards, laminés à chaud, etc." (12-2910-084) en octobre 1972. Ils sont toutefois inclus dans l'indice des prix de l'industrie de la sidérurgie.

Le concept de la mesure de la variation des prix se rapporte au revenu net à l'usine.

Purchase Price Indexes of Secondary Metals (1969=100)

Ferrous and non-ferrous indexes are compiled from a series of input prices, inclusive of transportation and brokerage fees, submitted by a wide variety of purchasers from selected industries. Indexes for certain categories of metals cannot be published because of the confidentiality of the data under the Statistics Act.

Canadian Farm Products Price Index (1935-39=100)

Prices of Western grains used in the index are Canadian Wheat Board buying prices for the grades listed below. Initial payments are first used in the index calculation and are revised as further payments are announced.

Final payments for the crop year August 1972 - July 1973 were announced on November 6, 1973 for wheat, oats and barley. The estimates of Final payments for the 1973-74 crop year are based on wheat Board predictions of April 1974.

Indices du prix d'achat des métaux de deuxième fusion (1969=100)

L'indice des métaux ferreux et non ferreux est établi à partir d'une série de prix comprenant les frais de transport et de dédouanement; ces données sont fournies par un large éventail de clients de certaines industries. Confidentiels en vertu de la Loi sur la statistique, les indices de certaines catégories de métaux ne peuvent être publiés.

Indice des prix des produits agricoles canadiens (1935-39=100)

Les prix des céréales de l'Ouest figurant dans l'indice représentent les prix à l'acheteur de la Commission canadienne du blé pour les catégories énumérées ci dessous. Les paiements initiaux servent d'abord au calcul de l'indice et sont ensuite révisés lorsque d'autres paiements sont annoncés.

Les prix définitifs pour la campagne allant d'août 1972 à juillet 1973 ont été annoncés le 6 novembre 1973, en ce qui concerne le blé, l'avoine et l'orge. Les estimations des paiements totaux pour la campagne agricole 1973-74 sont fondées sur les prévisions d'avril 1974 de la Commission canadienne du blé.

- (1) Used in original indexes from Aug. 1972 to July 1973. Utilisé dans les premiers indices d'août 1972 jusqu'en juillet 1973.
 (2) Incorporated retroactively in revised final indexes Aug. 1972 to July 1973. Inclus rétroactivement dans les indices finals révisés d'août 1972 à juillet 1973.
 (3) Used in current indexes. - Utilisé dans les indices courants.

General Wholesale Index (1935-39 = 100)

The General Wholesale Index is a commodity classified index of prices. The index is "general" inasmuch as it incorporates a diverse selection of both primary and processed commodities. It is called "wholesale" because its ingredient prices relate to that broad and heterogeneous area of commodity distribution which excludes only retail trade. In fact, the term "wholesale" has more of a connotation of bulk trading than of any homogeneous level of distribution. Thus, though the index mainly includes prices of producers, it also covers transactions of "middle men" who trade in commodities of a type or in quantities characteristic of primary marketing functions.

Though general wholesale price indexes have been calculated by many countries for years there is no precise answer to the question of what such an index measures. This is so because the index cannot be associated with any adequately definable value aggregate. Unlike a consumer price index which can be identified with expenditures of household consumers, a general wholesale index covers a host of overlapping transactions sometimes involving the same ingredient in as many as three different stages of processing. Yet, conceptually, it is not a measure of the purchasing power of money because it omits significant areas of monetary transactions such as prices of land, labour, securities and services, except in so far as prices of these things are implicit in commodity prices. As a conventional summary figure, its use has tended towards a reference level against which to observe the behaviour of particular price groups such as farm products, industrial materials, building materials and the various other groupings for which indexes are published. And as an indicator of general business conditions it is usually included in the group which is regarded as approximately coincident with the business cycle. However, its main attribute now lies in its long historical continuity.

For further details about the General Wholesale Index please consult: *Wholesale Price Indexes 1913-50* (Reference Paper No. 24) *Prices and Price Indexes 1949-52* (Vol. 23) (Catalogue No. 62-501).

Thirty Industrial Materials, (1935-39 = 100)

The price index of thirty industrial materials is calculated as an unweighted geometric average of prices of the selected commodities. The formula is as follows:

$$\sqrt[30]{P^1_{tN} \times P^2_{tN} \times P^3_{tN} \times \dots \times P^{30}_{tN}}$$

$$\sqrt[30]{P^1_{t\ 35-39} \times P^2_{t\ 35-39} \times P^3_{t\ 35-39} \times \dots \times P^{30}_{t\ 35-39}}$$

Indice général des prix de gros (1935-39 = 100)

L'indice général des prix de gros est un indice des prix classés par produit. Cet indice est "général" du fait qu'il comprend une variété de produits primaires et de produits transformés. Il est appelé "de gros" parce que les prix qui le composent se rapportent au domaine vaste et hétérogène de la distribution des produits dont seul le commerce de détail est exclu. En réalité l'expression "de gros" fait penser plus au commerce de gros qu'au niveau homogène de distribution. Bien que l'indice comprenne surtout les prix établis par les producteurs, il englobe également les transactions des "intermédiaires" qui vendent des produits dont le genre et la qualité sont particuliers aux fonctions premières de la commercialisation.

De nombreux pays calculent l'indice général des prix de gros depuis des années; il n'en reste pas moins impossible de dire exactement ce que cet indice mesure, car on ne peut l'associer à une valeur globale que l'on puisse définir exactement. Contrairement à l'indice des prix à la consommation que l'on peut identifier, grâce aux dépenses des ménages, l'indice général des prix de gros couvre une foule de transactions à double emploi impliquant parfois le même élément considéré jusqu'à trois étapes différentes de la transformation. Cependant, du point de vue conceptuel, cet indice ne constitue pas une mesure du pouvoir d'achat du dollar parce qu'il ne tient pas compte de transactions monétaires aussi importantes que le prix du terrain, du travail, des valeurs mobilières et des services, sauf si elles sont comprises dans le prix de produits. En tant que chiffre représentatif classique, on a une tendance à s'en servir pour comparer le comportement de certains groupes de prix, par exemple, celui des produits agricoles, des matières industrielles, des matériaux de construction et de divers autres groupes pour lesquels on publie des indices. Comme indicateur de la situation générale du commerce, l'indice est habituellement intégré au groupe dont on considère qu'il correspond le plus exactement au cycle commercial. Sa qualité principale réside cependant dans sa longue continuité chronologique.

Pour plus de détails sur l'indice général des prix de gros consulter *Wholesale Price Indexes 1913-50* (Reference Paper No. 24) et *Prices and Price Indexes 1949-52* (Vol. 23) (no 62-501 a catalogue).

Indice des prix de trente matières industrielles (1935-39 = 100)

L'Indice des prix de trente matières industrielles est calculé comme moyenne géométrique non pondérée des prix de certaines marchandises. La formule est la suivante:

$$\sqrt[30]{P^1_{tN} \times P^2_{tN} \times P^3_{tN} \times \dots \times P^{30}_{tN}}$$

$$\sqrt[30]{P^1_{t\ 35-39} \times P^2_{t\ 35-39} \times P^3_{t\ 35-39} \times \dots \times P^{30}_{t\ 35-39}}$$

The selection of materials for pricing relates to groups such as "stable" prices, numbering 12, food prices, numbering 5 and "sensitive" prices, numbering 13. We plan to construct an index of industrial prices that will relate to current usage of materials and that will be of the more traditional Laspeyre's type in its construction. The presently published index contains prices for some materials that no longer constitute important industrial inputs.

The Consumer Price Index for Canada (1961 = 100)

The Consumer Price Index measures the percentage change through time in the cost of purchasing a constant "basket" of goods and services representing the purchases by a particular population group in a specified time period. The "basket" is an unchanging or equivalent quantity and quality of goods and services, consisting of items for which there are continually measurable market prices over time.

The index relates to a broad but specific group of urban families and reflects the price changes experienced by that "target group". The index may not represent closely the experience of any one specific family within the group, nor should it be expected to reflect price change for other population groups for which income, family size and place of residence are characteristically different. The target group to which the current index relates is composed of families — (a) living in cities with over 30,000 population, (b) ranging in size from two to six persons and (c) with annual incomes in 1967 ranging from \$4,000 to \$12,000. To measure the influences of price change on the cost of goods and services purchased by such families, the Consumer Price Index reflects movements of some 300 items.

The history of consumer price indexes in Canada extends back to the early 1900's and encompasses periodic revisions of index base reference periods and weighting patterns. In January 1969, the time base was updated to 1961 = 100 from 1949 = 100; details are contained in the January 1969 issue of the monthly publication *Prices and Price Indexes*, Catalogue 62-002.

From March 1961 to April 1973 inclusive, the weights or relative importance of the items in the Consumer Price Index were based on 1957 family expenditure patterns; details of these weights can be found in *The Consumer Price Index for Canada (1949 = 100) (Revision Based on 1957 Expenditures)*, Catalogue 62-518. A subsequent weight revision to reflect 1967 family expenditure patterns (and within the food component, 1969 detailed spending habits) was introduced in May 1973. Full details of the latest weighting pattern and other background information on the Consumer Price Index is available in the occasional paper *The Consumer Price Index for Canada (1961 = 100) (Revision Based on 1967 Expenditures)*, Catalogue 62-539.

Le choix des matières servant au prélèvement des prix et se rapportant à des groupes tels que prix "stables", (12 matières), prix des aliments (5 matières) et prix "variables" (13 matières). Nous projetons d'établir un indice des prix industriels qui se rapportera à l'utilisation courante des matières et dont la structure se rapprochera plus du type Laspeyres plus traditionnel. L'indice publié ici renferme les prix de certaines matières qui ne sont plus considérées comme intrants importants dans l'industrie.

L'indice des prix à la consommation pour le Canada (1961 = 100)

L'indice des prix à la consommation mesure le taux de variation dans le temps du coût à l'achat d'un "panier" constant de biens et de services représentant les achats d'un groupe déterminé de la population au cours d'une période donnée. Le "panier" est constitué par des biens et des services en quantité et de qualité constantes; il comprend uniquement les biens et services qui ont un prix et dont les prix peuvent être observés de façon continue.

L'indice se rapporte à un groupe vaste, mais délimité, de familles urbaines et rend compte des changements de prix auxquels ce "groupe cible" doit faire face. L'indice peut ne pas suivre de près les changements de prix touchant une famille en particulier de ce groupe, pas plus que les changements de prix touchant d'autres groupes de la population dont le revenu, la taille des familles ou les lieux de résidence diffèrent sensiblement. Le groupe cible auquel se rapporte l'indice actuel se compose de familles a) vivant dans des villes de plus de 30,000 habitants, b) dont la taille est comprise entre deux et six personnes, et c) dont les revenus annuels en 1967 étaient compris entre \$4,000 et \$12,000. Afin de mesurer les effets de changements de prix sur le coût des biens et des services achetés par ces familles, l'indice des prix à la consommation suit les mouvements de quelque 300 articles.

L'histoire des indices de prix à la consommation au Canada remonte au début des années 1900, et elle comprend des révisions périodiques des périodes de référence de base de l'indice ainsi que des schémas de pondération. En janvier 1969, on a aligné la base de temps de 1949 = 100 à 1961 = 100; d'autres renseignements figurent dans l'édition de janvier 1969 de la publication mensuelle *Prix et indices des prix* (numéro 62-002 au catalogue).

De mars 1961 à avril 1973 inclusivement, les poids, ou l'importance relative des éléments de l'indice des prix à la consommation étaient basés sur les tendances de dépense des familles pour 1957; on peut trouver le détail de ces poids dans la publication *The Consumer Price Index for Canada (1949 = 100) (Revision based on 1957 Expenditure)*, numéro 62-518 au catalogue. En mai 1973, on a introduit une nouvelle révision des poids afin de prendre en compte les tendances de consommation des familles en 1967 (et, dans l'élément aliments, les habitudes détaillées de dépense en 1969). Le détail complet du dernier schéma de pondération et d'autres renseignements fondamentaux sur l'indice des prix à la consommation figurent dans la publication hors série *L'indice des prix à la consommation du Canada (1961 = 100) (Révision fondée sur les dépenses de 1967)*, numéro 62-539 au catalogue.

The Consumer Price Index for Canada Reclassified by Goods and Services

A revised supplementary classification system, entitled "The Consumer Price Index Reclassified by Goods and Services", was introduced in May 1973 with the revision of the weighting pattern of the Consumer Price Index to reflect 1967 expenditures.

This supplementary classification introduces an improved framework for regrouping the items which comprise the Index. In it, all items in the C.P.I. have been reclassified into two major categories — goods and services — according to their most characteristic or dominant attribute. The goods component has been sub-divided into three categories: durable, semi-durable, and non-durable goods, according to expected average useful lifetime criteria. Services, on the other hand, have been sub-divided according to broad functional categories.

Historical series conforming to the revised classification system replace the previously published supplementary indexes and are available, with explanatory notes, for the period January 1961 to April 1973 inclusive, in *Retail Prices and Living Costs Service Bulletin*, Catalogue 62-005, Vol. 2 No. 7.

Consumer Price Indexes for Regional Cities (1961 = 100)

Consumer Price Indexes for Regional Cities are published monthly in this bulletin (Table 11). Except for their individual weighting systems, and the fact that they are based on fewer quotations, the regional city indexes are generally similar in concept and item coverage to the Consumer Price Index for Canada.

Prior to May 1973, the city indexes may have underestimated the degree of price movements occurring because the shelter component of the city indexes moved on the basis of changes in rents only, whereas changes in both rents and homeownership costs were, and continue to be, included in the Canada index. As a result of homeownership costs having increased more rapidly than rents, the housing and the all-items indexes for cities tended to underestimate somewhat the rates of price increase particularly over longer periods. From May 1973 forward, however, homeownership costs are included in the regional city consumer price indexes so that the Canada and the regional city indexes are consistent in terms of their content and treatment.

Each city index is designed to measure the influence of changes in retail prices taking place in the locality specified, upon the cost of a fixed basket of goods and services representing the level of consumption of a representative group of families in the particular area specified.

In using the city indexes, it should be remembered that they do not in any way indicate whether price levels are higher or lower in one city than in another. Rather, they measure, within each city, the percentage change in consumer prices from the base period to subsequent time periods.

L'indice des prix à la consommation au Canada reclassé par biens et services

Un système révisé de classification supplémentaire, intitulé "L'indice des prix à la consommation au Canada reclassé par biens et services", a été introduit en mai 1973 en même temps que la révision des schémas de pondération de l'indice des prix à la consommation afin de rendre compte des dépenses de 1967.

Cette classification supplémentaire regroupe dans un cadre amélioré les éléments de l'indice. En effet, tous les éléments de l'I.P.C. ont été reclassés dans deux grandes catégories, soit la catégorie des biens et celle des services, suivant leur caractère le plus distinctif ou dominant. La catégorie des biens présente trois sous-catégories (biens durables, biens semi-durables, biens non durables) déterminées en fonction de la vie utile moyenne prévisible. D'autre part, on a réparti les services suivant quelques grandes catégories fonctionnelles.

Les séries historiques conformes au système révisé de classification remplacent les indices supplémentaires publiés auparavant, et on peut les trouver, avec des notes explicatives, pour la période janvier 1961-avril 1973, dans la publication "Prix de détail et coût de la vie" - Bulletin de service, numéro 62-005 au catalogue, vol. 2 no 7.

Indices des prix de la consommation dans certaines agglomérations urbaines (1961 = 100)

Ces indices sont publiés tous les mois dans la présente publication (Tableau 11). À l'exception de leurs systèmes de pondération particuliers, et de ce qu'ils font appel à moins de prix, ces indices sont en général semblables par leur concept et par les éléments qui les composent à l'indice des prix à la consommation au Canada.

Avant mai 1973, les indices des agglomérations ont pu sous-estimer le degré de changement des prix, parce que l'élément logement des indices des agglomérations ne variait qu'en fonction de l'évolution des loyers, tandis que l'indice pour le Canada ne comprenait et ne comprend toujours que les changements des loyers et les coûts de propriété. Comme les coûts de propriété ont augmenté plus vite que les loyers, les indices du logement et l'ensemble pour les villes tendent à sous-estimer quelque peu le taux de croissance des prix, principalement sur des périodes plus longues. À partir de mai 1973, cependant, les coûts de propriété sont inclus dans les indices de prix à la consommation de agglomérations urbaines, de sorte que les indices pour le Canada et les agglomérations urbaines sont homogènes à la fois pour ce qui est de leur contenu et de leur traitement.

Chaque indice de ville est conçu de manière à mesurer l'effet des changements des prix de détail dans la ville en question sur les prix d'un panier constant de biens et de services représentant le niveau de consommation d'un groupe représentatif de familles dans cette ville.

Le lecteur devra toujours garder en mémoire que ces indices n'indiquent en aucune façon si les prix sont plus élevés dans une ville que dans une autre. Ils mesurent plutôt dans chaque ville le taux de variation des prix à la consommation à partir de la période de base et des périodes subséquentes.

For comparisons of retail price differentials between cities, see Table 14 of this publication and the relevant explanatory notes.

Purchasing Power of the 1961 Consumer Dollar

As consumer prices rise, the sum of money required to purchase an unchanging or equivalent quantity and quality of goods and services increases, and the amount of these items that can be purchased with a fixed sum of money decreases. Conversely, as prices fall, the amount of goods and services that can be purchased with a fixed sum of money increases. Thus, rising prices are associated with declining purchasing power of money and falling prices are associated with its increasing purchasing power.

The purchasing power of the consumer dollar, in other words, bears an inverse relationship to the movement of the Consumer Price Index. For example, by January 1973, compared with their average level in 1961, consumer prices as measured by the C.P.I. were 44.5% higher, so that an equivalent basket of goods and services which could be purchased for \$100.00 in 1961 would cost the consumer \$144.50 in January 1973. Each consumer dollar in January 1973, therefore, buys less than in 1961, and the amount of its reduced value can be expressed in terms of the inverse consumer price movement. Thus, in January 1973 the purchasing power of the 1961 consumer dollar declined to approximately 69 cents ($\$1.00 \times 100.0 / 144.5 = \0.69).

Users of the tabulation which shows the purchasing power of the 1961 consumer dollar at different points in time (Table 12) should note that, as in the case of the Consumer Price Index from which it is derived, it may not represent closely the experience of any one specific family within the large group to which the C.P.I. relates; nor should it be expected to reflect the experience of other population groups whose income, family size and place of residence are characteristically different. It should also be noted that, like the C.P.I., it is not directly affected by changes in income tax, unemployment insurance premiums and certain other security payments.

Measuring the Purchasing Power of Wages

Changing consumer price levels affect the amounts of consumer goods and services which a dollar will buy, and average wages, insofar as they are spent on such items will, of course, be affected in the same way. A wage measurement which takes the change of consumer prices into account, can be calculated by reducing actual average wages by the percentage rise in consumer price levels, or increasing them by the amount price levels fall. Wages thus adjusted may be used to indicate the comparative purchasing power of average earnings if consumer price levels and consumption patterns had remained constant. The following illustration shows how this kind of an adjustment can be made.

Suppose that a series of average weekly wages rises from \$80.00 in week A to \$100.00 in week B, and that in the same interval a consumer price index advances from 100 to 110.0. Because of the 10% rise in consumer prices, \$1.00 will not buy as much in week B as it would in week A. On the

Pour étudier les différences de prix de détail entre les villes, il faut consulter le tableau 14 de la présente publication et les notes explicatives qui l'accompagnent.

Pouvoir d'achat du dollar de consommation 1961

À mesure que les prix à la consommation montent, la somme nécessaire à l'achat d'une quantité et d'une qualité constantes ou équivalentes de biens et de services augmente, et la quantité de ces articles qui peut être achetée avec une somme d'argent fixe diminue. Inversement, à mesure que les prix baissent, la quantité de biens et de services qui peut être achetée avec une somme d'argent constante augmente. Ainsi, la hausse des prix est liée à la baisse du pouvoir d'achat de la monnaie, et la baisse des prix est liée à la hausse du pouvoir d'achat.

Le pouvoir d'achat du dollar de consommation, en d'autres termes, évolue en raison inverse du mouvement de l'indice des prix à la consommation. Ainsi, en janvier 1973, par rapport au niveau de 1961, les prix à la consommation mesurés par l'I.P.C. avaient progressé de 44.5%, de sorte qu'un panier équivalent de biens et de services qui coûtait \$100 à l'achat en 1961 aurait coûté \$144.50 en janvier 1973 au consommateur. Par conséquent, chaque dollar de consommation en janvier 1973 achète moins qu'en 1961, et l'on peut exprimer le montant de sa valeur réduite en fonction de l'inverse du mouvement des prix à la consommation. Ainsi, en janvier 1973, le pouvoir d'achat du dollar de consommation 1961 était tombé approximativement à 69 cents ($\$1.00 \times 100.0 / 144.5 = \0.69).

Les utilisateurs du tableau qui indique le pouvoir d'achat du dollar de consommation de 1961 à différentes périodes (tableau 12) doivent noter que, comme dans le cas de l'indice des prix à la consommation dont il a été tiré, il peut ne pas suivre de près le cas d'une famille en particulier faisant partie du grand groupe auquel se rapporte l'I.P.C., pas plus qu'il ne rend nécessairement compte des dépenses d'autres groupes de la population dont les revenus, la taille des familles et les lieux de résidence diffèrent sensiblement. Il faut également noter que, tout comme l'I.P.C., il n'est pas touché directement par les changements de l'impôt sur le revenu, les primes d'assurance-chômage et certains autres paiements d'assistance.

Mesure du pouvoir d'achat des salaires

Les changements du niveau des prix à la consommation affectent les quantités de biens et de services de consommation qu'un dollar peut acheter, et les salaires moyens, dans la mesure où ils sont consacrés à de tels articles, seront naturellement touchés de la même façon. Une mesure des salaires qui prendrait en compte les changements de prix à la consommation peut se calculer en réduisant les salaires moyens réels du taux d'accroissement des prix à la consommation, ou en les augmentant dans une proportion égale à la baisse des prix. Les salaires ainsi ajustés peuvent servir à indiquer le pouvoir d'achat comparatif des gains moyens si les prix à la consommation et les tendances de consommation étaient restés constants. L'exemple suivant montre comment on peut procéder à un ajustement de cette nature.

Supposons qu'une série de salaires hebdomadaires moyens passe de \$80 pendant la semaine A à \$100 au cours de la semaine B, et qu'au cours de la même période un indice des prix à la consommation passe de 100 à 110. Par suite de la hausse de 10% des prix à la consommation, \$1 n'achètera pas autant au cours de

other hand, the 25% rise from \$80.00 to \$100.00 will overstate the increase which has occurred in the purchasing power of average weekly wages. This overstatement can be removed by reducing the figure of \$100.00 by the amount of the consumer price index increase. The adjusted average is \$90.91 $((100.0/110.0) \times \$100)$, which may be referred to as a weekly wage average for week B expressed in the dollars of period A; or it may be said to indicate the level of real weekly wages relative to week A.

The foregoing calculation can be carried a step further to express, in index number form, the relationship between the week A average of \$80.00 and the week B adjusted figure of \$90.91. Assuming the week A average of \$80.00 as an index equal to 100, the week B index becomes 113.6 $((90.91/80.00) \times 100)$. Such an index may be called an index of average weekly real wages. It indicates that average wages for week B will buy 13.6% more goods and services than they did in week A, in spite of a 10% rise in consumer prices. This 13.6% increase in real wages compares with the 25% rise in money wages $((\$100.00 - \$80.00 / \$80.00) \times 100)$.

In Table 13, the index numbers of average weekly wages in manufacturing in current dollar terms (1961 = 100) are calculated by dividing the weekly wages in current dollars by the 1961 average weekly wage in current dollars and multiplying the result by one hundred. For example, the weekly wage index for September 1972 in current dollars (1961 = 100) is 196.4 $((146.23/74.45) \times 100)$. The weekly wages in 1961 dollar terms are determined by dividing the weekly wage in current dollars by the consumer price index for Canada for the month following the month to which the wages relate and multiplying the result by one hundred. Thus, the September 1972 weekly wage in 1961 dollars is \$102.98 $((146.23/142.0) \times 100)$. (The wage and the price data both refer to generally similar time periods: current wages for a particular month relate to the last pay periods in that month, while most prices for the consumer price index of the following month are collected in the first week of that month.)

The index numbers of weekly wages in 1961 dollar terms (1961 = 100) are determined by dividing the weekly wages in 1961 dollars by the base (1961) average weekly wage and multiplying the result by one hundred. For example, the September 1972 weekly wage index in 1961 dollar terms (1961 = 100) is 138.3 $((102.98/74.45) \times 100)$.

It should be noted that while the estimates of average real wages may reflect the experiences of broad groups of workers in manufacturing fairly well, their applicability to individual wage-earners depends upon a number of considerations. For example, individual earnings will differ significantly from the group average, depending upon occupation, industry, geographical location, or sex of the wage-earner. Moreover, individual spending habits differ widely, but the consumer price index which is used to adjust the earnings data refers only to the average consumption pattern of a particular population group. Group spending patterns change over periods of time. To the extent that this occurs, the wage data adjusted by the consumer price index (which has a "fixed" consumption pattern), will gradually be re-

la semaine B qu'au cours de la semaine A. Par contre, la hausse de 25% (de \$80 à \$100) va surévaluer la hausse qui s'est produite dans le pouvoir d'achat des salaires hebdomadaires moyens. Cette surévaluation peut être réduite en réduisant le chiffre de \$100 du montant de l'accroissement de l'indice des prix à la consommation. La moyenne ajustée sera \$90.91 $((100.0/110.0) \times 100)$, et que l'on peut désigner comme étant la moyenne du salaire hebdomadaire pour la semaine B exprimée en dollars de la période A; on peut aussi dire qu'elle indique le niveau réel des salaires par rapport à la semaine A.

On peut pousser ce calcul plus loin, en exprimant à l'aide d'un indice, la relation entre le salaire moyen de \$80 de la semaine A, et le salaire révisé de \$90.91 de la semaine B. En supposant que la moyenne de la semaine A soit un indice égal à 100, l'indice de la semaine B devient 113.6 $((90.91/80.00) \times 100)$. On pourrait appeler un tel indice l'indice de la rémunération hebdomadaire effective. Il indique que le salaire moyen pour la semaine B permettra aux consommateurs d'acheter pour 13.6% de plus en biens et services que pendant la semaine A, et ceci, en dépit de l'augmentation de 10% des prix à la consommation. Cette augmentation effective de 13.6% se compare à l'augmentation de 25% des salaires $((\$100.00 - \$80.00 / \$80.00) \times 100)$.

Au Tableau 13, les nombres indices des salaires hebdomadaires moyens dans les industries manufacturières en dollars courants (1961 = 100) s'obtiennent en divisant les salaires hebdomadaires en dollars courants par le salaire hebdomadaire moyen de 1961 en dollars courants et en multipliant le résultat par cent. Ainsi, l'indice des salaires hebdomadaires pour septembre 1972, exprimés en dollars courants (1961 = 100) est 196.4 $((146.23/74.45) \times 100)$. Les salaires hebdomadaires en dollars de 1961 s'obtiennent en divisant les salaires hebdomadaires en dollars courants par l'indice des prix à la consommation pour le Canada pour le mois qui suit celui auquel se rapportent les salaires, et en multipliant le quotient par cent. Ainsi, le salaire hebdomadaire de septembre 1972 exprimé en dollars de 1961 est \$102.98 $((146.23/142.0) \times 100)$. (Les données sur les salaires et les prix portent en général sur des périodes semblables: les salaires courants d'un mois donné sont généralement ceux des dernières périodes de paie du mois, alors que la plupart des prix pour l'indice des prix à la consommation du mois suivant sont recueillis au cours de la première semaine de ce mois.)

Les nombres indices des salaires hebdomadaires en dollars de 1961 (1961 = 100) s'obtiennent en divisant les salaires hebdomadaires en dollars de 1961 par les salaires hebdomadaires moyens de l'année de base (1961) et en multipliant le quotient par cent. Ainsi, l'indice des salaires hebdomadaires pour septembre 1972, exprimés en dollars de 1961 (1961 = 100), sera 138.3 $((102.98/74.45) \times 100)$.

Il convient de souligner que, même si les estimations des salaires réels moyens résument assez bien la situation d'un large éventail de travailleurs dans les industries manufacturières, elles ne peuvent être appliquées aux individus sans quelques précautions. Ainsi, le revenu d'un salarié s'écartera sensiblement de la moyenne du groupe en fonction de sa profession, de l'industrie dans laquelle il travaille, de sa situation géographique ou de son sexe. De plus, les habitudes de consommation varient considérablement d'un individu à l'autre, alors que l'indice des prix à la consommation qui sert à redresser les données sur les gains porte uniquement sur la structure moyenne de consommation d'un groupe déterminé. De même, les habitudes de consommation changent avec le temps. Ainsi, les données sur les gains rajustées par l'indice des prix à la consommation (les habitudes de consommation)

dered less valid; the consumer price index weighting pattern was last revised in May 1973, and prior to that, in 1961. Furthermore, some part of income may be saved, and it should be borne in mind that it is not appropriate to reduce savings to a constant dollar basis by using an index which reflects consumption patterns.

It should also be kept in mind that measures of change in real earnings calculated from averages of gross earnings may differ from changes in the purchasing power of "take-home" pay, due to such factors as changes in personal income tax and pay deductions for such things as social insurance and pension plans. Thus index numbers of real wages should not be interpreted as measuring fluctuations in the levels of consumption of wage-earners or wage-earners' families; they are intended to show only the trend in purchasing power of wages over the items covered by the price index, and in addition to the factors already mentioned, do not take into account other family income (including family allowances) or changes in the savings position of families.

The table in this report showing indexes of both actual (current dollar) and real (constant dollar) wages uses 1961 as a reference year. However, any reference period may be chosen as a base since percentage changes between any two periods will be the same regardless of the reference period selected.

Further information regarding Table 13 can be obtained from: Labour Division, Statistics Canada.

Inter-City Retail Price Comparisons

Statistics relating to differences in retail prices between Canadian cities were initially developed for food, and subsequently extended to cover such other elements of the family budget as clothing, transportation, household operation, health and personal care, recreation, education and reading, and tobacco and alcohol. In all, inter-city price comparisons are drawn for commodities and services comprising nearly three-quarters of the budget on which the Consumer Price Index for Canada is currently based with the major omission being shelter (both rented and owned). While recognizing the importance of shelter differentials in any overall comparison of the general price level being encountered by consumers in different urban centres, the problems inherent in drawing valid comparisons between cities are such as to require further research. Meanwhile, it is considered that, despite the absence of shelter differentials at this time, publication of retail price comparisons for other elements of the budget will go some distance towards serving the varied needs of users.

Table 14 presents the results of an updating of earlier partial retail price measurements to May 1971 and includes more complete data on several cities. A fuller explanation of the study from which this table is derived is contained in the November 1968, November 1969 and April 1972 issues of *Prices and Price Indexes* (Statistics Canada, Catalogue Number 62-002).

mation étant supposées "fixes") perdront graduellement de leur valeur; le schéma de pondération de l'indice des prix à la consommation a été révisé pour la dernière fois en mai 1973, et avant cela, en 1961. De plus, il ne faut pas oublier qu'une partie du revenu peut être épargnée et qu'il serait faux de recalculer cette épargne en dollars constants à partir d'un indice qui se rapporte à des habitudes de consommation.

De même, il faut se rappeler que l'évaluation des variations des gains effectifs calculées à partir de moyennes effectives peut différer de l'évaluation des variations du pouvoir d'achat du revenu disponible en raison de facteurs tels que l'évolution de l'impôt sur le revenu des particuliers et des retenues destinées à l'assurance sociale, aux régimes de pensions, etc. Ainsi, l'indice de la rémunération effective ne sert pas à mesurer les variations des niveaux de consommation des salariés ou de leurs familles, mais plutôt à montrer les tendances du pouvoir d'achat des salariés par rapport aux articles contenus dans l'indice; enfin, l'indice ne prend pas en compte les autres revenus des familles (tels que les allocations familiales) ou les variations de l'épargne des familles.

La période de référence du tableau qui présente les salaires tant réels (en dollars courants) qu'effectifs (en dollars constants) prend pour base l'année 1961. En fait, on peut choisir n'importe quelle période de référence comme base, puisque les taux de variation entre deux périodes seront les mêmes quelle que soit la période de référence choisie.

On peut obtenir plus de renseignements sur le tableau 13 en s'adressant à la Division du travail, Statistique Canada.

Comparaisons entre les prix de détail d'une ville à l'autre

À l'origine, la statistique des différences entre les prix de détail d'une ville du Canada à l'autre a été mise au point pour l'alimentation; par la suite, on l'a étendue à d'autres postes du budget familial tels que l'habillement, les transports, l'entretien du ménage, la santé et les soins personnels, les loisirs, la formation et la lecture, et le tabac et l'alcool. Au total, les comparaisons d'une ville à l'autre portent sur des biens et des services constituant près des trois quarts du budget servant actuellement à construire l'indice des prix à la consommation au Canada, la seule grande omission étant le logement (location et frais de possession). Sans vouloir nier l'importance des différences en ce qui concerne le logement dans toute comparaison globale du niveau général des prix auxquels les consommateurs doivent faire face dans divers centres urbains, il faut bien dire que les problèmes que comporteraient l'établissement d'une comparaison valable d'une ville à l'autre sont tels qu'ils nécessitent plus de recherche. Entre-temps, on estime que malgré l'absence actuelle de données sur les dépenses de logement, la publication de comparaisons des prix de détail pour d'autres postes du budget permettra de faire de gros progrès en ce qui concerne la satisfaction des besoins variés des utilisateurs.

On trouvera au Tableau 14 le résultat d'une mise à jour de mesures de prix de détail tirées précédemment jusqu'à mai 1971, ainsi que des données plus complètes sur plusieurs villes. Une explication plus détaillée de l'étude dont le tableau en question est tiré figure dans les livraisons de novembre 1968, novembre 1969, et avril 1972 de *Prix et indices des prix* (no 62-002 au catalogue).

The original data base of this study was the wide range of retail price quotations collected in the course of production of the national and urban Consumer Price Indexes. In developing these spatial price comparisons, efforts were made to achieve comparability by equating qualities of goods and services and by matching types of retail outlets, as far as possible. Price relationships between pairs of cities were derived and subsequently converted to a common base of Winnipeg prices equalling 100 to facilitate comparisons over the whole range of cities. Except for foodstuffs and new passenger cars for which inter-city price differentials were derived directly from new comparisons based on May 1971 price data, the updating of these measurements of inter-city retail price differentials was accomplished by application of the relative movement of prices, at the item level in each city, over the intervening periods as derived from the relevant city consumer price indexes. These price relationships at the item level were aggregated on the basis of the Canada urban consumer spending pattern, rather than the patterns applicable to individual cities. While differences in spending patterns exist among cities, the magnitude of these differences in the cities covered is not such as to affect most of the spatial comparisons significantly. Because of the previously mentioned absence of shelter price relationships, which may be of considerable significance in any overall comparison of inter-urban retail price differentials, aggregative indexes beyond major budget groupings are not shown.

The weighting factors used to combine items to group and component levels in Table 14 are based on 1957 expenditures, and therefore will not be identical to the 1967 weights, introduced in May 1973, in Consumer Price Index tables.

It should be noted that the retail prices used in this comparison, being those faced by consumers, include sales and excise taxes as applicable. Variations between provinces in the scale of sales taxes imposed on a wide range of non-food commodities can be of significance in explaining inter-city price differentials for these items.

While these indexes have been expressed in terms of Winnipeg = 100, the selection of Winnipeg as the base city has no special significance, and the indexes may be expressed on the base of any of the individual cities included.

Farm Input Price Indexes (1961 = 100)

Farm Input Price Indexes measure, through time, changes in prices of commodities and services used in Canadian farming operations. The item content and weights are based on data from the 1958 Farm Income and Expenditure Survey, the most recent source of sufficiently detailed data. These data have been modified to reflect 1961 prices and conditions. Farm Input Price Indexes are calculated quarterly for Eastern, Western and all Canada on a 1961 = 100 time base.

Les premières données de base pour la présente étude ont été constituées par l'importante collection de prix de détail recueillie lors de la confection des indices nationaux et urbains des prix à la consommation. Au moment d'établir ces comparaisons géographiques de prix, on s'est efforcé d'assurer la comparabilité en prenant des biens et des services de qualité égale et en assortissant autant que possible les points de vente au détail par type. Les relations de prix entre paires de villes ont été calculées puis converties à la base commune des prix de Winnipeg = 100 afin de faciliter des comparaisons pour l'ensemble de toutes les villes. Sauf pour les denrées alimentaires et les voitures neuves, pour lesquelles les différences de prix entre villes ont été tirées directement de nouvelles comparaisons fondées sur les données de mai 1971, la mise à jour de ces mesures des différences de prix de détail entre les villes a été assurée grâce à l'extension des mouvements relatifs de prix au niveau de chaque article dans chaque ville aux périodes observées selon le calcul établi à partir de l'indice des prix à la consommation pour la ville en question. Ces relations entre les prix au niveau de l'article ont été agrégées sur la base des habitudes de consommation du citoyen pour l'ensemble du Canada et non pas selon les habitudes de dépense applicables à des villes individuelles. Même s'il existe des différences dans les habitudes de dépense d'une ville à l'autre, l'importance de ces différences en ce qui concerne les villes dont il est question ici ne sont pas suffisantes pour influencer sensiblement sur la plupart des comparaisons géographiques. Du fait de l'absence des relations de prix en ce qui concerne le logement, dont il a déjà été question ci-dessus et qui pourrait avoir une importance considérable chaque fois que l'on voudrait tirer une comparaison globale entre les différences de prix à la consommation au détail d'une ville à l'autre, on ne trouvera ici aucun indice synthétique agrégé au-delà des principales composantes du budget.

Les facteurs de pondérations utilisés pour regrouper les articles en groupes et en éléments dans le Tableau 14 sont basés sur les dépenses de 1957; ils ne sont donc pas identiques aux pondérations de 1967 adoptées en mai 1973 dans les tableaux relatifs à l'indice des prix à la consommation.

Il faut remarquer que les prix de détail ayant servi à la présente comparaison sont ceux que doit payer le consommateur et comprennent donc les taxes de vente et les taxes d'accises qui peuvent s'appliquer. Les différences d'une province à l'autre entre les barèmes de taxe de vente imposés sur une grande variété de biens non alimentaires peut avoir une grande importance pour expliquer les différences de prix d'une ville à l'autre pour les articles en question.

Le fait que ces indices aient été exprimés en prenant Winnipeg = 100 ne signifie pas que le choix de Winnipeg comme ville de référence ait une signification particulière et les indices pourraient être exprimés sur la base de n'importe laquelle des villes qui y figurent.

Indices de prix des entrées dans l'agriculture (1961 = 100)

Les indices de prix des entrées dans l'agriculture mesurent l'évolution dans le temps du prix des produits et des services utilisés dans l'exploitation agricole au Canada. Les articles qui sont compris, ainsi que leurs poids, sont fondés sur l'enquête de 1958 sur les revenus et les dépenses des agriculteurs, qui constitue la source la plus récente dont les données soient suffisamment détaillées. Ces données ont été adaptées de manière à rendre compte des prix et des conditions constatées pour 1961. Les indices des prix des entrées dans l'agriculture sont calculés chaque trimestre pour l'Est, l'Ouest et l'ensemble du Canada sur la base 1961 = 100.

Farm Input Price Indexes replace one of the two major component indexes of the previously published series, Price Index Numbers of Commodities and Services Used by Farmers, 1935-39 = 100. The latter index was composed of a Farm Family Living Index and a Composite Index Exclusive of Living Component. The Farm Input Price Indexes replaces the Composite Index Exclusive of Living Component from 1961 forward.

A detailed description of concepts, methods and data sources is contained in the occasional paper, *Farm Input Price Indexes, 1961 = 100*, Catalogue No. 62-534, and is reproduced in the September 1971 issue of *Prices and Price Indexes*, Catalogue No. 62-002. The foregoing publications also contain total and component price indexes for Eastern, Western, and all Canada, from 1961 to and including the third quarter 1971.

Current price indexes will be published on a regular basis in the quarterly publication, *Farm Input Price Indexes, 1961 = 100*, Catalogue No. 62-004, and in the monthly publication *Prices and Price Indexes*, Catalogue No. 62-002.

The Farm Family Living component of the 1935-39 series has not been replaced by an updated counterparts, and publication has been suspended.

Security Price Indexes

Security price indexes measure through time the effect of price change on the value of a portfolio of stocks bought and held by a hypothetical investor (as opposed to the more speculative trader). The portfolio represents stocks of Canadian companies listed on Toronto and Montreal stock exchanges.

The number of shares held for each issue is in proportion to the total number of shares outstanding. Prices in the investor's mining and supplementary stock indexes are Thursday's closing quotations from the exchange (Montreal, Toronto, Vancouver or Calgary) with the highest volume for particular stock, as reported in the Daily Canadian Data Bank of the Financial Post Computer Services Department. For preferred stocks, prices are monthly weighted averages of the daily closing price in which weights are daily total volume. The price reference base for the indexes is the year 1956, and the indexes express prices as a percentage of price 1956, arithmetically converted to the 1961 = 100 base.

Revised indexes on the base 1956 = 100 were first presented in the June 1962 issue of this publication. The most important change in the revision of the indexes, apart from the shift in the price reference base, was the classification of stocks according to the Standard Industrial Classification. In the continuing major group Industrials, 4 sub-groups (Milling and Grains, Food and Allied Products, Machinery and Equipment, and Building Materials) were replaced by 8 new sub-groups (Foods, Printing and Publishing, Primary Metals, Metal Fabricating, Non-metallic Minerals, Chemicals, Construction and Retail Trade). The remaining 5 sub-groups of the former index, viz., Industrial Mines, Beverages, Textile and Clothing, Pulp and Paper, and Oils (renamed Petro-

Les indices des prix des entrées dans l'agriculture remplacent l'un des deux principaux éléments d'indices de la série précédente sur l'indice de prix des produits et services utilisés par les agriculteurs, (1935-39 = 100). Cet indice comprenait l'indice du coût de la vie pour les familles agricoles et l'indice synthétique sans le coût de la vie. Les indices des prix des entrées dans l'agriculture remplacent l'indice synthétique sans le coût de la vie à partir de 1961.

Le bulletin hors série *Farm Input Price Indexes, 1961 = 100* (no 62-534 au catalogue) contient une description détaillée des concepts, des méthodes et des sources de données qui est reprise dans *Prices and Price Indexes* de septembre 1971 (no 62-002 au catalogue). Ces deux bulletins contiennent également les indices des prix totaux et partiels pour l'Est et l'Ouest du Canada et pour l'ensemble du Canada, de 1961 au troisième trimestre de 1971 inclusivement.

Les indices des prix en cours seront publiés régulièrement dans le bulletin trimestriel *Farm Input Price Indexes, 1961 = 100* (no 62-004) et dans le bulletin annuel *Prices and Price Indexes* (no 62-002).

On n'a pas remplacé l'indice du coût de la vie pour la famille agricole des séries de 1935-39 par un équivalent à jour et on a cessé de la publier.

Indices des cours des valeurs mobilières

Les indices des cours des valeurs mobilières mesurent dans le temps l'incidence du mouvement des prix sur la valeur d'un portefeuille de titres achetés et détenus par un actionnaire hypothétique (par opposition au spéculateur). Le portefeuille comprend des actions de sociétés canadiennes cotées à la Bourse de Toronto et de Montréal.

Le nombre d'actions détenues pour chaque émission est proportionnel au nombre total d'actions en circulation. Les indices des prix des titres miniers et les indices supplémentaires sont les cours de fermeture de jeudi (Montréal, Toronto, Vancouver et Calgary) affichant le volume le plus élevé pour une valeur en particulier, d'après la Banque des données canadiennes quotidiennes du Service de l'informatique du *Financial Post*. Pour les actions privilégiées, les prix sont les moyennes pondérées mensuelles des cours de clôture de chaque jour et les poids, le volume quotidien total. La période de référence pour les indices est l'année 1956 et les indices représentent les prix exprimés en pourcentage des prix de 1956 recalculé sur la base 1961 = 100.

Les indices révisés sur la base 1956 = 100 ont été publiés pour la première fois dans la livraison de juin 1962 de cette publication. La modification la plus importante à la révision de l'indice, à part le changement de la période de référence, a été le classement des actions d'après la Classification des activités économiques. Dans le cas du grand groupe des valeurs industrielles, 4 sous-groupes (minoterie et céréales, aliments et produits connexes, machines et matériel et matériaux de construction) ont été remplacés par 8 nouveaux sous-groupes (aliments, imprimerie et édition, métaux primaires, produits métalliques, minéraux non métalliques, produits chimiques, construction et commerce de détail). On a conservé les 5 autres sous-groupes de l'ancien indice: mines industrielles, boissons, textiles et habillement, pâte et

leum) were continued. The major group utilities was continued but the Pipelines index was added as a sub-group and the previous Power and Traction sub-group was replaced by two new sub-groups, viz., Electric Power and Gas Distribution. A major group Finance was composed of the former major group Banks and the former supplementary index Investment and Loan. Constant weights which were previously limited to major groups, were extended to sub-groups. Weights in the index continue to be based on shares outstanding.

A revision of the Security Price Indexes to the 1971 = 100 base is under development.

For the list of stocks currently included in the Investors Index and Preferred Index, see *Prices and Price Indexes* for March 1974.

Residential and Non-Residential Building Construction Price Indexes

The fixed-weighted input price indexes of materials and wage rates for residential and non-residential building construction are being published here for the convenience of users (Table 20). A more complete description of the characteristics of the indexes appeared in the May 1970 issue of *Prices and Price Indexes*, and this explanation is available on request from the Prices Division, as is historical monthly data for the series.

Because the indexes measure the impact of price change on the materials and labour inputs to construction, and not the effects of changes in profit margins or productivity, there is thought to be an upward bias in these indexes as indicators of price change for the output of building construction, or buildings in place. Users are therefore warned to exercise caution in making use of the series, for this purpose. A comparison of these series with the implicit price deflators⁽¹⁾ providing an estimate of price change for the output of the industry, derived from the measurement of gross fixed capital formation in constant dollars, will provide some insight into the effects on the price movement of adjusting the fixed-weighted input indexes for changes in productivity and profit margins.

During the period from 1926-1966 a special sample or respondents supplied materials prices for the index. As of 1961 this sample has been replaced with prices from the ISPI system⁽²⁾. The latter are published monthly in Table 2 of this publication.

The Construction wage rate series is based on wage rate material supplied by the Labour Standards Branch, Dept. of Labour, and relates to minimum wages paid on government contracts for construction in a variety of trades and cities.

papiers, et huiles (sous la désignation de pétrole). Le grand groupe de services d'utilité publique a été conservé mais l'indice des pipelines a été ajouté comme sous-groupe et l'ancien sous-groupe d'énergie et traction a été remplacé par deux nouveaux sous-groupes: l'énergie électrique et la distribution du gaz. Le nouveau grand groupe "Finances" est composé de l'ancien grand groupe banques et de l'ancien indice supplémentaire investissements et prêts. Les facteurs constants de pondération qui étaient autrefois limités aux grands groupes s'appliquent maintenant aux sous-groupes. Les facteurs de pondération de l'indice continuent à être basés sur les actions en circulation.

On prépare actuellement une révision des Indices des cours des valeurs mobilières sur la base 1971 = 100.

La liste des titres repris actuellement dans les indices des valeurs de placements et dans les indices des valeurs privilégiées se trouve dans *Prix et indices des prix* de Mars 1974.

Indices des prix de la construction résidentielle et non résidentielle

Les indices à pondération fixe des prix des entrées de matériaux et de salaires dans la construction résidentielle et non résidentielle sont publiés ici pour faciliter la tâche aux utilisateurs (Tableau 20). On trouvera une description plus détaillée des caractéristiques des indices dans *Prices and Price Indexes* de mai 1970. On peut s'en procurer un exemplaire ainsi que les données mensuelles chronologiques sur cette série en s'adressant à la Division des prix.

Comme les indices mesurent l'influence des variations de prix sur les entrées de matériaux et de main-d'oeuvre du bâtiment plutôt que les répercussions des variations de marges bénéficiaires ou de productivité, on les croit surestimés en tant qu'indicateurs des variations de prix de la construction, ou des bâtiments construits. Les utilisateurs devront donc faire preuve de discernement quand ils se serviront des séries à cette fin. Si l'on compare ces séries avec les facteurs de dégonflement⁽¹⁾ des prix implicites (qui donnent une estimation de la variation du prix pour la production de l'industrie), obtenus en mesurant la formation brute de capital fixe en dollars constants, on aura un aperçu des effets de l'ajustement sur l'évolution des prix des indices à pondération fixe des entrées pour tenir compte des variations de productivité et de marges bénéficiaires.

Au cours de la période 1926-1966, un échantillon spécial d'enquêtes a donné les prix pour l'indice. En 1961, on a remplacé cet échantillon par les prix tirés du système I.P.V.I.⁽²⁾. Ces prix sont publiés par mois dans le Tableau 2 du présent bulletin.

La série consacrée au taux de rémunération dans l'industrie du bâtiment est basée sur les chiffres fournis par la Direction des normes du travail du ministère du Travail; elle a trait au salaire minimum versé aux termes de marchés signés avec le gouvernement pour des travaux de construction dans divers corps de métiers et dans diverses villes.

(1) Gross National Product Division, Statistics Canada.

(2) *Industry Selling Price Indexes 1956-1968* Cat. 62-528.

(1) Division du produit national brut, Statistique Canada.

(2) *Indices des prix de vente dans l'industrie, 1956-1968*, n° 62-528 au catalogue.

Users are reminded that the indexes were arithmetically rebased to the year 1961 = 100 and therefore combining the components with the weights as shown will not provide the composite index provided. Users able to provide their own weights for the components can recombine the components to suit their particular needs.

Basic Union Wage Rate Indexes for Major Construction Trades

Basic union wage rate indexes are prepared for 12 major construction trades in each of 14 cities in Canada. Weighted average city indexes are prepared as well as a 14 city composite. Indexes are released quarterly in summary form in Tables 21 and 22 of Prices and Price Indexes (62-002). This index is found in Table 20 of Prices and Price Indexes (62-002). Full trade detail, by city, is published quarterly in the Construction Price Statistics Service Bulletin, (62-006).

Rates utilized in index calculations are derived mainly from the *Construction Collective Agreement Survey Service* provided by the Canadian Construction Association. These rates are supplemented as necessary by surveys of some union locals. While indexes containing supplementary benefits will be available soon, presently published indexes relate to basic union wage rates only. The rates indicate the rate of straight time compensation for one hour in the city specified. Rates converted into the form of ratios were combined into weighted average city indexes utilizing 1961 Census of Population data on numbers of people employed by trade and average earnings in the construction industry.

The base-weighted indexes provide an estimate of the impact of rate change on basic union wages for the major construction trades employed in a given city. Because union workers in cities tend to be engaged mainly in non-residential construction, commercial building construction and because rates for trades associated with engineering work were excluded from the price sample the indexes best approximate wage rate change for non-residential construction.

Highway Construction Price Indexes (1961 = 100) (3)

The Price Indexes of Highway Construction in Canada express prices paid by provincial governments in contracts awarded for highway construction each year, as a percentage of prices paid in 1961. The arithmetic conversion of the indexes to a 1961 time base does not change their percentage movements as compared to the previously published indexes to a 1956 = 100 time base. Users are warned that an aggregation of the converted major group indexes with the published weights will not yield the published 1961 = 100 all items indexes. The conversion does not create a problem for a user wishing to reweight the converted major group indexes using weights appropriate to this own purpose.

The years refer to fiscal years. Thus 1968 refers to the period April 1, 1968 to March 31, 1969.

Nous rappelons aux utilisateurs que les indices ont été recalculés sur la base 1961 = 100 et qu'ils n'obtiendront pas l'indice synthétique fourni en combinant les éléments et les pondérations donnés. Les utilisateurs qui sont à même de fournir leur propre pondération pour les éléments peuvent procéder à leur propre combinaison adaptée à leurs besoins spécifiques.

Indices du salaire syndical de base dans les principaux corps de métiers

Les indices du salaire syndical de base portent sur les 12 principaux métiers de la construction dans 14 grandes villes canadiennes. On calcule les indices pondérés moyens pour chaque ville de même que l'indice synthétique des 14 villes. Les indices sont publiés chaque trimestre dans les Tableaux 21 et 22 de la publication *Prix et indices des prix* (numéro de catalogue 62-002). On peut trouver cet indice dans le Tableau 20 de la publication *Prix et indices des prix* (no 62-002). Des données détaillées sur tous les métiers de la construction dans chaque ville sont publiés chaque trimestre dans le bulletin de service *Statistique des prix dans la construction* (numéro de catalogue 62-006).

Les taux utilisés dans le calcul des indices proviennent principalement de la publication *Construction Collective Agreement Survey Service* de l'Association canadienne de la construction. Des enquêtes auprès de certaines succursales de syndicats ont été menées lorsqu'il fallait disposer de taux supplémentaires. On publiera sous peu des indices contenant les avantages supplémentaires, mais les indices actuels portent uniquement sur le salaire syndical de base. Les taux correspondent à la rémunération normale pour une heure dans la ville en question. Les taux convertis en ratios ont été transformés en indices pondérés moyens des villes à partir des données tirées du recensement de la population de 1961 sur les effectifs de chaque métier et les gains moyens dans l'industrie de la construction.

Les indices pondérés permettent d'évaluer l'influence de la variation du taux des salaires syndicaux pour les principaux métiers de la construction dans une ville donnée. Étant donné que les travailleurs syndiqués dans les villes s'occupent surtout de la construction non résidentielle, ou commerciale, et que les taux des métiers relevant du génie civil n'ont pas été inclus dans l'échantillon des prix, les indices constituent la meilleure approximation des variations dans les taux de salaire dans la construction non résidentielle.

Indices des prix de la construction routière (1961 = 100) (3)

Les indices des prix de la construction routière au Canada représentent les prix payés chaque année par les administrations provinciales au titre des marchés de construction routière, en pourcentages des sommes payées en 1961. La conversion des indices à la base 1961 = 100 ne modifie pas leur évolution en pourcentages comparativement aux indices publiés précédemment et dont la base était 1956 = 100. Les utilisateurs ne doivent pas s'attendre à ce que le groupement des indices convertis des grands groupes et des pondérations publiées donne l'indice général publié (1961 = 100). Cette conversion ne pose aucun problème à l'utilisateur qui désire réviser la pondération des indices convertis des grands groupes en utilisant les poids adaptés à ses fins propres.

(3) Il s'agit d'exercices financiers. 1968 représente donc la période de 1er avril 1968 au 31 mars 1969.

Base-weighted indexes are published annually and measure, for the period 1956 to 1968, the effect of price change on the cost of specific programmes of highway construction in Canada represented by highway construction contracts of approximately \$50,000 or more awarded by specified provincial governments during the weight-base period. Weights of items in the index, representing the relative importance of units of construction in the year 1956 are held constant. Only the estimates of prices change from year to year, and the indexes thus measure the movement of prices through time. For a more complete statement of the problem of estimating price change for highway construction see pages vi & vii of the December 1967 issue of *Prices and Price Indexes*, Catalogue 62-002 and pages 9 & 10 of the reference paper *Price Indexes of Highway Construction* in Catalogue 62-520. The all-items index or its components are useful for planning and budgeting for highway construction programmes, in escalating or updating previously costed roadwork, in estimating replacement cost of previously completed roadwork, and as historical measurements of price trends in highway construction.

The indexes do not necessarily reflect the price movements of non-contract construction or maintenance work. The indexes are designed to measure price changes for a fixed programme of highway construction, in each of the seven provinces. Because price levels in the time base-period (1961) varied from province to province the indexes cannot be used to compare price differences between provinces, but only to compare differences in the rate at which prices are changing in the provinces.

Prices contained in the index are not for units of labour and materials as is usually the case in construction price indexes but rather for units of construction work put in place such as an acre of clearing, a cubic yard of earth excavation or a ton of bituminous hot-mix paving. In addition, the index contains prices of some materials, such as culvert pipe, usually supplied to the contractor by the highway departments. Prices of highway construction work are annual weighted averages of bid prices of units of construction in groups of contracts awarded, classified by price-determining characteristics of the contracts and the bid items such as volume of the bid item, type of contract and geographic location. Prices of material items of supply are prices paid by government departments to suppliers.

Price Indexes of Electric Utility Construction

In electric utility terms, the index is designed to provide an estimate of the impact of price change on the cost of materials, labour and equipment used in constructing and equipping electric utilities in a specified base period. The index provides an estimate of how much more, or less it would cost to reproduce the base-period programme of construction in another period, using the same construction technology as in the base period and assuming rates of profit and productivity in construction are the same in both periods.

Les indices pondérés en fonction de la base sont publiés chaque année; ils mesurent, pour la période allant de 1956 à 1968, l'influence de l'évolution des prix sur le coût des programmes spécifiques de construction de routes au Canada représenté par les marchés de construction de routes d'environ \$50,000 ou plus accordés par certaines administrations provinciales au cours de la période visée par la base de pondération. Les poids des éléments des indices qui représentent l'importance relative des unités de construction en 1956 sont constants. Seules les estimations de prix varient d'une année à l'autre; les indices mesurent donc l'évolution des prix dans le temps. Pour plus de détails sur l'estimation de l'évolution des prix pour la construction routière, se reporter au pages vi et vii du numéro de décembre de *Prices and Price Indexes* (Numéro 62-002 au catalogue de Statistique Canada) et aux pages 9 et 10 du bulletin intitulé *Price Indexes of Highway Construction in Canada* (no 62-520 au catalogue de Statistique Canada). L'indice général ou ses éléments servent à la planification et à la budgétisation des programmes de construction routière, à indexer ou à mettre à jour les prix de travaux de routes effectués précédemment, à estimer le coût de remplacement des travaux routiers achevés précédemment et à mesurer chronologiquement l'évolution des prix de la construction routière.

Les indices ne reflètent pas nécessairement l'évolution des prix de la construction effectués hors marché ou des travaux d'entretien; ils servent à mesurer les variations de prix pour un programme déterminé de construction routière dans chacune des sept provinces. Au cours de la période qui a servi de base (1961), les niveaux de prix ont varié d'une province à l'autre; aussi, on ne peut utiliser les indices pour comparer des différences de prix entre les provinces mais on peut seulement les employer pour comparer les différences entre taux de variation des prix dans les provinces.

Les prix compris dans l'indice ne se rapportent pas aux unités de travail ni de matériaux comme c'est habituellement le cas dans l'indice des prix de la construction; ils se rapportent plutôt aux unités de travail de construction effectué, comme le défrichement d'une acre de terrain, l'excavation d'une verge cube ou l'épandage à chaud d'une tonne de béton bitumineux. En outre, l'indice comprend le prix de certain matériaux, par exemple, les tuyaux de ponceau fournis habituellement à l'entrepreneur par les ministères de la Voirie. Les prix des travaux de construction routière sont des moyennes pondérées des prix de soumission pour les unités de construction par groupe de marchés classés selon les caractéristiques des marchés qui déterminent le prix et les éléments d'offre tels que le volume de chaque poste, le type de marché et la situation géographique. Les prix de matériaux fournis sont les prix payés par les ministères aux fournisseurs.

Indices des prix à la construction dans les services d'électricité

En ce qui concerne les services d'électricité, l'indice a pour but de fournir une estimation des conséquences des variations de prix sur le coût des matériaux, de la main-d'oeuvre et du matériel utilisés dans la construction et l'équipement des services d'électricité au cours d'une période de référence donnée. L'indice sert à mesurer combien il faudrait payer en plus ou en moins pour réaliser un programme de construction identique à celui de la période de référence en utilisant les mêmes techniques de construction et en supposant que les taux de rentabilité et de productivité de la construction soient les mêmes pour les deux périodes.

As the market does not yield comparable selling prices for such unique transactions as, for example, the sale of a transmission line, it was not possible to produce an index of the prices of completed structures. Completed structure indexes would be appropriate for users wishing either to estimate reproduction costs or to deflate capital formation. For such uses the indexes introduced in this publication have specific short-comings. Nonetheless, they may be helpful for such purposes provided the users understand the deficiencies. Thus the reader is asked to make particular note of Section II, of Occasional Paper Catalogue 62-526 Price Indexes of Electrical Utility Construction - The Necessity for Compromise and Section XI, (of the same paper) Uses and Limitations. In addition, because particular construction projects are unique, the aggregate indexes will not likely be appropriate for specific projects since they relate to an average mix of materials, labour and equipment derived from a variety of projects in a specific base period. Thus, if the component price indexes and their weights included in the aggregate index presented herein are inappropriate for a particular purpose the user should consider selecting appropriate component indexes from among those published herein. These indexes could then be combined into an aggregate index by utilizing weights derived from the projects or assets to be costed or deflated.

Prices used in the indexes are for the most part selling prices reported monthly by manufacturers for materials or equipment. The price reported is for units and terms of sale representative of the volume sales of the manufacturer. Where sales to electric utilities form a small share of the total sales of the manufacturer, the price reported may not adequately represent the price to the construction trade and users directly involved in constructing and equipping electric utility facilities. In such cases, prices charged other manufacturers or wholesalers have been included in the index. Federal sales tax changes are reflected in the index but no adjustments have been made for provincial tax changes. Until December 1964 wage rate data were supplied by the Federal Department of Labour and represented minimum hourly rates paid to construction workers in major cities employed on federal government contracts. In 1965 union basic wage rates reported by major utilities and some contractors were incorporated into the index. The sample selected provides an estimate of wage rate change for urban on account and contract electric utility construction. Some other improvements will be made to improve the coverage relating to rural non-union work for transmission lines.

Construction has been defined as new construction or major reconstruction for distribution systems, transmission lines and transformation or switching stations. Maintenance and operating costs are excluded. Cost data were supplied by major utilities, relating to own account and to contract construction erected during the last half of the 1950's. Rights were derived from these data which indicated the relative importance of the major inputs to the construction. Components of cost relating to distribution and transmission facilities encompass such items as poles, hardware, conductors, insulators, meters, distribution transformers and expenditures for labour, e.g. - linemen and groundmen. Costs

Comme il est impossible d'obtenir directement sur le marché des prix de vente comparables pour des opérations de caractère aussi unique, par exemple, que la vente d'une ligne de transport d'énergie, Statistique Canada n'a pu établir un indice du prix des installations en place. Un tel indice ne serait utile que si l'on désirait obtenir une estimation des sommes qu'il faudrait engager pour réaliser à nouveau un programme de construction identique ou encore pour dégonfler une formation de capital. Les indices publiés ici présentent en ce sens certaines lacunes. Ils peuvent néanmoins servir à de telles fins pourvu que les utilisateurs en comprennent les limites. Les lecteurs peuvent se rapporter aux Sections III et XI de la publication *Price Indexes of Electrical Utility Construction* (Statistique Canada, 62-526): "*The Necessity for Compromise*" et "*Uses and Limitations*". De plus, en raison du caractère unique de chaque projet de construction, l'indice synthétique ne pourra sans doute pas s'appliquer à un projet bien précis car il porte justement sur une moyenne des matériaux, de la main-d'oeuvre et du matériel utilisés dans la réalisation de plusieurs projets au cours d'une période de référence donnée. Ainsi, si les indices détaillés et les poids correspondants qui composent les indices synthétiques présentés ici ne conviennent pas à un usage bien précis, l'utilisateur pourra toujours se servir des autres indices détaillés et construire, à l'aide des coefficients de pondération, les indices de son choix, soit pour évaluer le coût d'un projet, soit pour établir des facteurs de dégonflement.

La plupart des prix des matériaux et du matériel utilisés pour établir les indices sont les prix de vente déclarés mensuellement par les fabricants. Ces prix sont représentatifs des unités de mesure et des conditions de vente valables pour les ventes en grande quantité de fabricants. Lorsque les ventes aux services électriques ne représentent qu'un faible pourcentage du chiffre d'affaire d'un fabricant, il est possible que le prix déclaré ne représente pas de façon satisfaisante le prix consenti aux entreprises en construction et aux autres industries s'occupant directement de construction et d'installation de services d'électricité. Dans ces cas, on a inclus dans l'indice les prix facturés aux autres fabricants ou grossistes. On a tenu compte, dans l'établissement de l'indice, des variations de la taxe de vente fédérale; toutefois, il n'a été fait aucun redressement pour les variations de taxe provinciale. Jusqu'en décembre 1964, les données sur les taux de rémunération étaient fournies par le ministère fédéral du Travail et représentaient le salaire horaire minimum versé aux personnes travaillant au titre d'un marché accordé par le gouvernement fédéral dans certaines grandes villes. En 1965, on fit entrer dans l'indice le salaire de base exigé par les syndicats et déclaré par les principaux services et par certains entrepreneurs. L'échantillon choisi représente donc une estimation des variations du taux de rémunération dans la construction en ville de services électriques pour compte propre ou au titre d'un marché. Certaines améliorations à l'indice sont prévues de façons à l'étendre aux personnes non syndiquées travaillant dans les régions rurales à la construction de lignes de transport d'énergie.

Le terme "construction" a été défini comme étant la construction neuve ou la réparation des réseaux de distribution, de lignes de transport d'énergie, de postes de transformation ou de postes de manœuvre. L'entretien et les frais d'exploitation ne sont pas compris. Les données sur les prix de revient sont fournies par les principaux services d'électricité et portent sur la construction exécutée pour compte propre ou au titre d'un marché au cours de la deuxième moitié des années cinquante. Les poids tirés de ces données représentent l'importance relative des principaux éléments entrant dans la construction. Les composantes du coût de la distribution et du transport comprennent certains éléments comme les poteaux, la quincaillerie, les conducteurs, les isolateurs, les

relating to construction equipment such as trucks, and components of equipment operating costs such as tires, gasoline and repairs were also included. Transformation and switching stations encompass some of the items listed above but the most important elements of cost relate to transformers and switching equipment. Expenditures for land and rights-of-way have been excluded.

The term Canadian electric utility has been defined to include municipal as well as nonmunicipal utilities but the majority of the cost data tabulated was derived from the major nonmunicipal utilities. Manufacturers who produce electricity for their own use and who may also sell electricity have been excluded from the cost survey.

Price Indexes of Hydro-electric Generating Stations

The following additional points may be of assistance to users of the hydro-electric generating stations index which was described in some detail in Statistics Canada Occasional Paper, Catalogue 62-533.

- (a) Wage rate data are derived from a variety of sources but mainly from the Canadian Construction Association surveys of union agreements and from Federal Pay Research Bureau studies of salaries paid professional, technical and clerical personnel. Basic wage rates, excluding fringe benefits, were used in index calculations.
- (b) Prices for ready-mix concrete and for earth and gravels in place have been utilized as replacements for input prices of labour, materials and equipment rental for concrete production and embankments in place.
- (c) Prices are included for some categories of expense not previously included in input price indexes for construction: interest during construction, overhead expense and the provision and operation of temporary camp accommodation.
- (d) Weighting patterns exclude expenditure for ancillary facilities for logging and navigation permanent houses, etc.

Price Indexes of Machinery and Equipment

In response to the need of users wishing either to correct expenditure data of machinery and equipment for price change or to make comparison of commodity movement, a system of machinery and equipment indexes has been under development for a number of years. This is a system of industry indexes relating to types of equipment purchases made by establishments belonging to industries as defined by the 1960 Standard Industrial Classification.

compteurs, les transformateurs de distribution et les dépenses de main-d'oeuvre (monteurs, personnel de service, etc.). Les dépenses entraînées par le matériel de construction (camions et pièces d'équipement) et les frais d'exploitation (pneus, essence et réparations) sont également inclus. Les postes de transformation et les postes de transformation et les postes de manœuvre comprennent certains des éléments ci-dessus; les frais les plus importants sont cependant entraînés par les transformateurs et les appareils de connexion. Les dépenses foncières et les droits de passage ont été exclus.

Par définition, l'expression "service d'électricité canadien" englobe aussi bien les services municipaux que les autres; toutefois, la majeure partie des données de coût ont été tirées des déclarations des services non municipaux. Les fabricants qui produisent de l'électricité destinée à l'auto-consommation et qui peuvent également vendre de l'électricité ont été exclus de cette enquête.

Indices de prix des centrales hydroélectriques

Les points supplémentaires ci-après peuvent aider les utilisateurs de l'indice de centrales hydroélectriques décrit en détail dans le bulletin hors-série de Statistique Canada portant le numéro 62-533.

- (a) Les données sur le taux de rémunération proviennent de diverses sources et surtout des enquêtes sur les accords syndicaux de l'Association canadienne de la construction et des études du Bureau de recherche sur les traitements portant sur la rémunération des travailleurs intellectuels, des techniciens et du personnel administratif. Pour le calcul de l'indice, on a utilisé les taux de rémunération de base avant avantages sociaux non compris.
- (b) Au lieu du prix des entrées de main-d'oeuvre, de matériaux et de location de matériel pour la production de béton et des remblais effectués, on a utilisé le prix du béton préparé et livré de la terre et du gravier en place.
- (c) L'indice comprend les prix correspondant à certains postes de dépenses qui n'étaient pas repris auparavant dans l'indice de prix des entrées dans la construction: intérêt pendant la construction, frais généraux, fourniture et entretien de baraquements temporaires.
- (d) Les facteurs de pondération ne comprennent pas les dépenses affectées aux installations auxiliaires pour l'exploitation forestière et la navigation, les maisons permanentes, etc.

Indices des prix des machines et du matériel

Afin de répondre au besoin des utilisateurs qui désirent réviser les données sur les dépenses en machines et en matériel, fonction des changements de prix ou établir une comparaison du mouvement des marchandises, on prépare depuis un certain nombre d'années un système d'indices des prix des machines et du matériel. Il s'agit d'un système d'indices par industrie ayant trait aux genres d'achats de matériel des établissements qui font partie des industries définies dans la Classification type des industries 1960.

The base-weighted indexes give an estimate of how much more, or less, it would cost today to purchase a group of machines specified for a particular base period.

The interim time base for the indexes is 1968=100 and most of the data from which weighting patterns were derived came from 1968 or nearby years. Such data were usually supplied by major purchasers.

Conceptually purchasers' prices should be utilized in such indexes but because of a number of practical problems, manufacturers' selling prices were usually used. Such prices were then corrected as relevant for duty, exchange and federal sales tax.

Foreign prices utilized in the index are either U.S. Bureau of Labour Statistics commodity indexes or Prices Division collections from manufacturers most of whom reside in the United States.

The first industry index was released mid-1971 and related to purchases by the construction industry. Indexes for other industries will be released from time to time as they become available. In the interim preliminary indexes for a number of other industries are available on request. Certain commodity indexes which exclude adjustments for exchange, duty and federal sales tax can also be provided on request.

Les indices pondérés en fonction de la base donnent une estimation de la différence du prix d'achat d'un groupe de machines déterminé pour une période de base donnée.

La base provisoire pour les indices est 1968=100. La plupart des données dont on a extrait les facteurs de pondération dataient de 1968 environ. D'habitude, ces données étaient fournies par les principaux acheteurs.

Du point de vue conceptuel, on devrait utiliser les prix des acheteurs dans ce genre d'indices, mais on a habituellement employé les prix de vente de fabricants pour des questions d'ordre pratique. On a ensuite apporté à ces prix les corrections appropriées pour les droits de douane, le change et la taxe de vente fédérale.

Les prix étrangers utilisés dans l'indice sont les indices de prix des marchandises du *U.S. Bureau of Labour Statistics* ou ceux que la Division des prix a recueillis auprès des fabricants dont la majorité réside aux États-Unis.

Le premier indice par industrie a été publié au milieu de 1971; il se rapporte aux achats de l'industrie de la construction. Les indices des autres industries seront publiés de temps à autre, à mesure qu'ils seront disponibles. En attendant, on peut obtenir sur demande les indices préliminaires pour un certain nombre d'autres industries. Il en est de même pour certains indices de prix de marchandises, compte non tenu des ajustements pour le change, les droits de douane et la taxe de vente fédérale.

NOTES ON PRICES AND PRICE INDEX NUMBERS

Industry Selling Price Index: Manufacturing (1961 = 100)

The industry selling price index (Total Manufacturing) rose 0.9% in October to 179.6 from the September index of 178.0. It was 20.5% higher than the October 1973 index of 149.0.

In terms of the relative contribution to the overall change in the total manufacturing index, the more notable changes were increases recorded in the foods and beverages group (1.8%) with advances in sugar refineries (10.4%) soft drink manufacturers (11.2%) and pasturizing plants (4.8%), mitigated somewhat by declines in the slaughtering and meat packing industry. Upward movement in the metal stamping, pressing and coating industries (4.4%) moved the metal fabricating group higher. Within the primary metal group there was a significant advance (9.6%) for steel pipe and tube mills. The chemicals group advanced (1.9%), with all but one industry within the group showing increases for the period.

Decreases were evident in the wood products group for the 6th consecutive month with declines of (-6.5%) occurring in the sawmills and planing mills industry.

NOTES SUR LES PRIX ET L'INDICE DES PRIX

Indice des prix de vente dans l'industrie: Industries manufacturières (1961 = 100)

L'indice des prix de vente dans l'ensemble des industries manufacturières a progressé de 0.9%, passant de 178.0 en septembre à 179.6 en octobre. Il était également de 20.5% plus élevé que l'indice d'octobre 1973 (149.0).

Pour ce qui est de la contribution relative à la variation d'ensemble de l'indice, les mouvements les plus importants ont été enregistrés par le groupe des aliments et boissons (1.8%) en raison d'une hausse de 10.4% dans les raffineries de sucre, de 11.2% chez les fabricants de boissons gazeuses et de 4.8% dans les usines de pasteurisation. Ces hausses ont été quelque peu compensées par des baisses dans l'industrie de l'abattage et du conditionnement de la viande. Une hausse de 4.4% dans l'industrie de l'emboutissage, du matriçage et du revêtement des métaux a fait avancer le groupe de la fabrication des produits en métal. Dans le groupe de la première transformation des métaux, les usines de tuyaux et de tubes d'acier ont affiché une hausse de 9.6%. Le groupe des produits chimiques a progressé de 1.9%, toutes les industries de ce groupe sauf une ont enregistré des hausses.

Pour le sixième mois consécutif le groupe des produits du bois a enregistré des baisses, dont une diminution de 6.5% dans les scieries et les ateliers de rabotage.

General Wholesale Index (1935-39=100)

The general wholesale price index rose 1.1% in October to 477.4 from the revised September index of 472.0. Three of the eight major groups increased, three decreased and two remained the same. The vegetable products group index moved up 6.7% to 522.5 from the revised September index of 489.9. This increase was due to higher prices for sugar and its products, vegetable oils and grains. An advance of 1.6% to 468.6 from the revised September index of 461.2 in iron products group index reflected price increases for iron foundries and steel pipe and tubing. Chemical products group increased by 1.2% from the revised September index of 345.2 to 349.2 on increases for inorganic and organic chemicals. The wood products group index declined 2.0% from the revised September index of 577.6 to 565.8 reflecting price declines for spruce, hemlock and fir. Animal and textile products index decreased 1.9% and 0.1% respectively. Non-ferrous metals and non-metallic minerals group indexes remained the same.

Indice général des prix de gros (1935-39=100)

L'indice général des prix de gros a augmenté de 1.1% pour passer de 472.0 (chiffre rectifié) en septembre à 477.4 en octobre. Trois des huit principaux groupes ont augmenté, trois ont baissé et deux n'ont pas bougé. L'indice des produits d'origine végétale a augmenté de 6.7% pour passer de 489.9 en septembre (chiffre rectifié) à 522.5 en octobre. Cette hausse était due aux augmentations de prix du sucre et de ses produits, des huiles végétales et des céréales. L'indice des produits du fer a augmenté de 1.6% pour passer de 461.2 en septembre (chiffre rectifié) à 468.6 en octobre, à la suite des augmentations enregistrées dans les fonderies de fer et dans les fabriques de tubes et tuyaux, d'acier. Le groupe des produits chimiques a augmenté de 1.2% pour passer de 345.2 en septembre (chiffre rectifié) à 349.2 en octobre, à cause des hausses des produits chimiques organiques et inorganiques. L'indice des produits du bois a baissé de 2.0% pour passer de 577.6 en septembre (chiffre rectifié) à 565.8 en octobre, à la suite des diminutions de prix de la pruche, de l'épinette et du sapin. Les indices des produits animaux et des produits textiles ont baissé respectivement de 1.9% et 0.1%. Les indices des groupes métaux non ferreux et des minéraux non métalliques n'ont pas bougé.

* These indexes are preliminary. — Ces indices sont provisoires.

Security Price Indexes (1961=100)

The common stock prices index increased by 1.1% to 136.5 in October from 135.0 in September. Among the three major groups, industrials decreased by 0.4% down to 141.6, utilities increased by 2.7% to 112.4 and finance increased by 7.2% to 146.9. Within the thirteen industrial sub-groups, the beverages stock prices registered the most significant increase with an advance of 7.1% to 181.1. The chemicals stock prices decreased by 5.3% down to 109.8; this is the major industrial decrease in October. As far as utilities are concerned, transportation stock increased by 7.9% and pipeline stock increased by 5.1% respectively to 255.4 and 101.0. The finance index increase resulted from an increase of 6.9% in banks to 176.7 and an increase of 8.1% in investments and loans to 98.9.

During the same period, the index of stock prices in mining increased by 6.9% to 120.6; gold mines increased by 10.4% to 201.2 and base metal by 2.4% to 77.5.

As far as the two supplementary indexes are concerned, uranium decreased by 4.7% down to 210.1 while primary oils and gas increased by 5.3% to 260.4. The preferred stock index was up 3.1% from 55.5 in September to 57.2 in October.

Canadian Farm Products Index (1935-39=100)

The price index of Canadian farm products at terminal markets declined 1.5% to 500.9 in October from the September index of 508.3. The animal products index decreased 2.5% to 558.2 from 572.5, reflecting lower prices on both markets for raw wool, calves, lambs, steers and hogs, for cheese in the East, and for eggs in the West. Price increases were shown for fluid milk on both markets, and for eggs and poultry in the East.

The field products index declined 0.1% to 443.6 from 444.1 due to lower prices for potatoes on both markets, and for hay in the West. Price increases were shown for rye on both markets, and for flax in the West, while prices for hay, tobacco, barley, wheat and corn rose in the East.

Thirty Industrial Materials Price Index (1935-39=100)

The price index of thirty industrial materials, calculated as an unweighted geometric average, moved up 0.5% to 511.7 in October from the revised September index of 511.7. Prices were higher for eight commodities, lower for eleven and unchanged for eleven. Principal changes included in-

Indices des cours des valeurs mobilières (1961=100)

L'indice des cours de placements des actions ordinaires a augmenté de 1.1%, passant de 135.0 en septembre à 136.5 en octobre. Parmi les trois grands groupes, les valeurs industrielles ont diminué de 0.4% pour se fixer à 141.6, les services publics ont progressé de 2.7% pour atteindre 112.4 et les finances ont monté de 7.2% pour s'établir à 146.9. Parmi les treize sous-groupes industriels, le sous-groupe des breuvages domine les gains; il a augmenté de 7.1% pour se fixer à 181.1. Les actions des produits chimiques ont diminué de 5.3% pour s'établir à 109.8; ce sous-groupe a enregistré la plus forte diminution des industrielles en octobre. Dans le cas des services d'utilité publique, les actions du transport ont augmenté de 7.9% et celles des pipe-lines de 5.1% pour se fixer à 255.4 et 101.0 respectivement. L'augmentation de l'indice des finances est attribuable à une hausse des valeurs bancaires de 6.9% pour s'établir à 176.7 et à un gain de 8.1% des valeurs des placements et des prêts (98.9).

Au cours de la même période, l'indice du cours des titres miniers a augmenté de 6.9% pour s'inscrire à 120.6; les aurifères ont augmenté de 10.4% (201.2), et les métaux communs ont progressé de 2.4% (77.5). En ce qui a trait aux deux indices supplémentaires l'uranium a diminué de 4.7% (210.1); le pétrole et le gaz primaires ont augmenté de 5.3% en s'inscrivant à 260.4.

L'indice des actions privilégiées est passé de 55.5 en septembre à 57.2 en octobre, soit une augmentation de 3.1%.

Indice des prix des produits agricoles canadiens (1935-39=100)

L'indice des prix des produits agricoles canadiens sur les marchés terminaux a baissé de 1.5% pour passer de 508.3 en septembre à 500.9 en octobre. L'indice des produits animaux a baissé de 2.5% pour passer de 572.5 à 558.2, à la suite des diminutions de prix, sur les deux marchés, de la laine brute, des veaux, des agneaux, des bouvillons et des porcs, et du lait de fromagerie dans l'Est et des oeufs dans l'Ouest. On a observé des augmentations de prix pour le lait naturel sur les deux marchés et pour les oeufs et la volaille dans l'Est.

L'indice des produits de grande culture a baissé de 0.1% pour passer de 444.1 en septembre à 443.6 en octobre, à la suite des diminutions de prix des pommes de terre sur les deux marchés et du foin dans l'Ouest. Des augmentations de prix ont été enregistrées pour le seigle sur les deux marchés, pour le lin dans l'Ouest, et pour le foin, le tabac, l'orge, le blé et le maïs dans l'Est.

Indice des prix de trente matières industrielles (1935-39=100)

L'indice des prix de trente matières industrielles, calculé comme moyenne géométrique non pondérée, a augmenté de 0.5% pour passer de 511.7 en septembre (chiffre rectifié) à 514.0 en octobre. On a observé des hausses de prix pour huit marchandises, des diminutions pour onze et aucun changement pour onze. Les

creases for sisal, raw sugar, domestic wheat, rosin, linseed oil, raw rubber and oats while decreases were recorded for tin, beef hides, spruce lumber, steers, domestic copper, hogs, raw wool, bleached sulphite pulp and raw cotton.

Consumer Price Movements

The Consumer Price Index for Canada (1961 = 100) rose 0.9% to 172.2 in October from 170.6 in September. Nearly three-quarters of this advance was attributable to increases of 1.4% and 0.9% in the Food and Housing indexes, respectively. The Tobacco and Alcohol component advanced 1.6% and Clothing prices rose, on average, 0.8%. The Recreation, Education and Reading index went up 0.9% and that for Health and Personal Care advanced 1.4%. On the other hand, the Transportation component edged down 0.2%. In the latest month, the price level of All-Items other than Food rose 0.7%. Between October 1973 and October 1974, the All-Items Index advanced 11.6%.

The Food index advance of 1.4% to 196.3 in October from 193.6 in September, reversing the decline that normally occurs between these two months, was mainly attributable to higher prices for bread, milk and sugar-related products. These increases outweighed seasonally lower prices for fresh fruit and reductions for some meats, especially beef. Led by a 7.1% increase in bread prices, all surveyed cereal and bakery product items registered increases in the latest month. Similarly, a general advance in the retail price level for the full range of dairy products was sparked by a 3.7% rise in fresh milk. Sugar and such related products as chocolate bars and soft drinks continued their steep price climb: sugar has more than tripled and chocolate bars have nearly doubled in price since October 1973. Meat and poultry prices, in contrast, have risen less than 2% over the same twelve-month period. In early October beef prices, compared with one month before, averaged 2.5% lower while pork and poultry registered increases of 1.8% and 1.4%, respectively. There was a seasonal drop of 10% in the fresh fruit index but fresh vegetables rose by 4% mainly because of sharply increased prices for tomatoes and lettuce. Amongst other foodstuffs higher quotations were again recorded for fats and oils and for most convenience foods in the latest month, while food consumed away from home moved up by 1.2%. Between October 1973 and October 1974, the total Food index increased 15.7%, with the price of food consumed at home rising 15.3% and that for food away from home 17.1%.

The Housing index rose 0.9% to 170.8 in October from 169.2 in September as a result of increases of 1.2% and 0.5% in the shelter and household operation components, respectively. Within shelter, the home-ownership element moved up 1.6% mainly because of increases in the indexes for property taxes, mortgage interest and home-owner repairs: rents advanced 0.5%. Among household operation items, furniture prices rose, on average, 1.1% as most items surveyed recorded increases. Most other home furnishings also registered advances, including floor coverings and linen and

principales variations comprenaient des hausses pour le sisal, le sucre brut, le blé canadien, la colophane, l'huile de lin, le caoutchouc brut et l'avoine, tandis que baissaient les prix de l'étain, des peaux de boeuf, des sciages d'épinette, des bouvillons du cuivre canadien, des porcs, de la laine brute, de la pâte à sulphite blanchie et du coton brut.

Mouvements des prix à la consommation

L'indice des prix à la consommation au Canada (1961 = 100) a augmenté de 0.9%, passant de 170.6 en septembre à 172.2 en octobre. Près des trois quarts de cette augmentation étaient dûs aux augmentations respectives de 1.4% et 0.9% des indices de l'alimentation et de l'habitation. L'élément tabacs et alcools a augmenté de 1.6% et les prix des vêtements on augmenté en moyenne, de 0.8%. L'indice des loisirs, formation et lecture a augmenté de 0.9%, et celui de l'hygiène et des soins personnels de 1.4%. Par contre, l'indice des transports a baissé de 0.2%. Au cours du mois dernier, le niveau des prix de l'indice d'ensemble, les aliments non compris a augmenté de 0.7%. Entre octobre 1973 et octobre 1974, l'indice d'ensemble a augmenté de 11.6%.

L'indice de l'alimentation a augmenté de 1.4%, passant de 193.6 en septembre à 196.3 en octobre, contrairement à la baisse habituelle entre ces deux mois; cette hausse était surtout due aux augmentations du prix du pain, du lait et des produits à base de sucre. Ces augmentations n'ont été compensées qu'en partie par la baisse saisonnière des prix des fruits frais et par des réductions du prix de certaines viandes, en particulier du boeuf. Autre l'augmentation de 7.1% du prix du pain, tous les produits céréaliers et de boulangerie observés ont augmenté au cours du mois dernier. De même l'augmentation générale des prix de détail de tout l'éventail des produits laitiers a suivi l'augmentation de 3.7% du prix du lait frais. Les prix du sucre et des produits à base de sucre, comme les tablettes de chocolat et les boissons gazeuses, ont continué à grimper: le prix du sucre a plus que triplé et celui des tablettes de chocolat a presque doublé depuis le mois d'octobre 1973. Par contre, les prix de la viande et de la volaille ont augmenté de moins de 2% au cours des mêmes douze derniers mois. Au début du mois d'octobre, le prix du boeuf, comparé au mois précédent, avait baissé, en moyenne, de 2.5%, tandis que les prix du porc et de la volaille enregistraient des hausses respectives de 1.8% et 1.4%. Le prix des fruits frais a connu une baisse saisonnière de 10%, mais les légumes frais ont augmenté de 4%, surtout à cause des augmentations sensibles du prix des tomates et de la laitue. Parmi les autres produits alimentaires, les augmentations les plus fortes ont été enregistrées encore une fois au cours du mois dernier par les huiles et graisses, et pour la plupart des aliments préparés quant à l'indice des aliments consommés au restaurant, il a augmenté de 1.2%. Entre octobre 1973 et octobre 1974, l'indice d'ensemble de l'alimentation a augmenté de 15.7%, avec des augmentations respectives de 15.3% et 17.1% des indices des prix des aliments consommés à la maison et des aliments consommés au restaurant.

L'indice de l'habitation a augmenté de 0.9%, passant de 169.2 en septembre à 170.8 en octobre, à la suite des augmentations respectives de 1.2% et 0.5% des frais de logement et des dépenses de ménage. Dans l'élément frais de logement, les coûts de propriété ont augmenté de 1.6%, surtout à cause des augmentations des indices des taxes foncières, de l'intérêt hypothécaire et des réparations à la charge du propriétaire; les loyers ont augmenté de 0.5%. Dans la rubrique dépenses de ménage, le prix des meubles a augmenté, en moyenne, de 1.1% (la plupart des éléments observés ont augmenté). Presque tous les autres articles

draperies: however, sale prices for dishes in some cities resulted in a small decline in the tableware component. Household supply items rose 1.2%, on average, in response to increases on all items surveyed, and the index for household services went up 0.1% following telephone rate increases in some centres. Between October 1973 and October 1974, the Housing index rose 10.3%.

The Clothing index rose 0.8% to 156.3 in October from 155.0 in September, registering less of an advance than had occurred between these two months in the previous two years. Men's wear prices, which rose 1.0%, and women's wear, which rose 0.8%, accounted for about three-fifths of the increase in the total Clothing index. Children's clothing prices averaged 1.7% higher, the footwear index advanced 0.7%, and the component for piece goods and notions edged up 0.3%. In the latest twelve months, the Clothing index rose 9.8%.

The Transportation index edged down 0.2% to 153.4 in October from 153.7 in September owing to gasoline averaging 0.5% lower in price and a reduction in the train fares index. Partially offsetting these declines were higher inter-city bus fares in Alberta, British Columbia and Nova Scotia, and increased local transit fares in Thunder Bay. Higher prices were also recorded for motor oil in a number of major cities. The Transportation index stood 9.8% higher than twelve months earlier.

The Health and Personal Care index advanced 1.4% to 175.4 in October from 173.0 in September was largely attributable to higher dentists' fees. Increased prices for personal care supplies, especially toilet soap, hair preparations and toothpaste, also contributed. The Health and Personal Care index stood 10.1% higher than a year earlier.

The Recreation, Education and Reading index rose 0.9% to 164.3 in October from 162.9 in September. Generally higher admission prices to hockey games accounted for approximately two-thirds of this advance and increased driving lesson fees also contributed. Between October 1973 and October 1974, the Recreation, Education and Reading index advanced 11.2%.

The Tobacco and Alcohol index rose 1.6% to 147.8 in October from 145.5 in September with most of the increase being attributable to generally higher cigarette prices. In the latest twelve months, the Tobacco and Alcohol index advanced 8.2%.

Consumer price movements, reclassified by goods and services, offer another view of the incidence of price change. Between September and October, the total goods index advanced 0.9% with the main impetus coming from non-durable goods which rose 1.1% mainly in response to higher prices for food, tobacco products, domestic supplies and toiletry items. The index for semi-durable goods rose 0.8% chiefly because of higher quotations for clothing and

d'ameublement ont aussi enregistré des augmentations, y compris les revêtements de sol, le linge de maison et les rideaux; toutefois, des rabais des prix de la vaisselle dans certaines villes ont entraîné une légère diminution de l'élément articles de table. Les fournisseurs de ménage ont augmenté de 1.2%, en moyenne, à la suite d'augmentations des prix de tous les articles observés; et l'indice des services aux ménages a augmenté de 0.1%, à la suite des augmentations des tarifs téléphoniques dans certaines villes. Entre octobre 1973 et octobre 1974, l'indice de l'habitation a augmenté de 10.3%.

L'indice de l'habillement a augmenté de 0.8%, passant de 155.0 en septembre à 156.3 en octobre, soit une augmentation moindre que celle qui s'était produite entre ces deux mois les deux dernières années. Les augmentations respectives de 1.0% et de 0.8% des prix des vêtements pour hommes et des vêtements pour femmes ont représenté environ les trois cinquièmes de l'augmentation globale de l'indice de l'habillement. Les prix des vêtements pour enfants ont augmenté, en moyenne, de 1.7%, ceux des chaussures de 0.7% et ceux des tissus à la verge et menus articles de 0.3%. Au cours des douze derniers mois, l'indice de l'habillement a augmenté de 9.8%.

L'indice des transports a diminué de 0.2%, passant de 153.7 en septembre à 153.4 en octobre, à la suite de la diminution moyenne de 0.5% du prix de l'essence et de la réduction de l'indice des tarifs de chemin de fer et malgré des augmentations des tarifs d'autobus interrurbaines dans les provinces de l'Alberta, la Colombie-Britannique et la Nouvelle-Écosse, et des tarifs des transports locaux à Thunder Bay. On a également enregistré des hausses des prix de l'huile à moteur dans un certain nombre de grandes villes. L'augmentation de l'indice des transports a été de 9.8% au cours des douze derniers mois.

L'indice de l'hygiène et des soins personnels a augmenté de 1.4%, passant de 173.0 en septembre à 175.4 en octobre, surtout à la suite des augmentations des honoraires des dentistes. Ont également contribué à cette hausse, les augmentations des prix des articles de soins personnels, en particulier du savon de toilette, des produits pour cheveux et de la pâte dentifrice. L'indice de l'hygiène et des soins personnels a augmenté de 10.1% depuis l'année dernière.

L'indice des loisirs, formation et lecture a augmenté de 0.9%, passant de 162.9 en septembre à 164.3 en octobre. Les deux tiers de cette hausse étaient attribuables à l'augmentation générale des prix des billets d'admission aux parties de hockey; les tarifs des leçons de conduite automobile ont également contribué à cette hausse. Entre octobre 1973 et octobre 1974, l'indice des loisirs, formation et lecture a augmenté de 11.2%.

L'indice des tabacs et alcools a augmenté de 1.6%, passant de 145.5 en septembre à 147.8 en octobre; l'essentiel de l'augmentation était due à l'augmentation générale des prix des cigarettes. Au cours des douze derniers mois, l'indice des tabacs et alcools a augmenté de 8.2%.

Les mouvements des indices des prix à la consommation, reclassés par biens et services, présentent un autre point de vue sur les variations des prix. Entre septembre et octobre, l'indice d'ensemble des biens a augmenté de 0.9%, la plus forte augmentation provenant des biens non durables qui ont augmenté de 1.1% surtout à la suite des hausses des prix des aliments, des produits du tabac, des fournitures ménagères et des articles de toilette. L'indice des biens semi-durables a augmenté de 0.8%, surtout à cause de

household furnishings. Durable goods edged up 0.3% mainly in response to higher prices for furniture. A rise of 0.9% was recorded in the services index with the major contributors being the shelter, recreation, education and health elements. In the latest twelve months, the total goods index advanced 13.0% and that for services 9.1%.

la hausse des prix des vêtements et des articles d'ameublement. L'indice des biens durables a augmenté de 0.3% seulement, surtout par suite de l'augmentation du prix des meubles. L'augmentation de 0.9% enregistrée par l'indice des services était surtout due aux augmentations des coûts de logement, des loisirs, de la formation et des prix des articles d'hygiène. Au cours des douze derniers mois, l'indice d'ensemble des biens a augmenté de 13.0% et celui des services de 9.1%.

TABLE 2. INDUSTRY SELLING PRICE INDEXES BY INDUSTRY AND SELECTED COMMODITIES

TABLEAU 2. INDICE DES PRIX DE VENTE DANS L'INDUSTRIE PAR INDUSTRIE ET PAR CERTAINS PRODUITS

1961 = 100

Industries and selected commodities(1) Industrie et certains produits(1)	Month — Mois												Annual
	J	F	M	A	M	J	J	A	S	O	N	D	Annue
	1971												
	1972												
	1973												
	1974												
Industry selling price index: manufacturing(7) — Indice de prix de vente dans l'industrie: industries manufactu- rières.(7)	1970	119.1	119.4	119.6	119.7	119.6	119.1	118.8	118.5	118.9	118.9	118.8	119.1
	1971	119.4	119.8	120.3	121.2	121.2	121.7	122.3	122.4	122.5	122.6	122.7	121.6
	1972	124.5	125.3	125.9	126.5	126.7	126.9	127.4	127.8	128.5	129.0	129.7	127.4
	1973	133.1	134.6	136.6	138.2	139.5	141.0	143.0	147.9	147.7	149.0	150.2	142.7
	1974	156.8	159.3	162.2	165.5	167.9	169.9	173.1	175.9	178.0	179.6		

(1) Indexes for 1972, 1973 and 1974 are subject to revision. — Les indices pour 1972, 1973 et 1974 sont sujets à révision.

(2) This industry was changed in commodity content, price sample and weights in accordance with significant changes within the industry. Figures are revised from January 1971 to date. — La composition en marchandises, les échantillons de prix et les mesures de poids ont changé dans cette industrie conformément à des changements importants survenus dans l'industrie même. Les chiffres sont révisés de janvier 1971 à aujourd'hui.

(3) Effective January 1973 changes have been made in the calculation of this index. For details see page 88. — À compter de janvier 1973, on a modifié le calcul de cet indice. Pour plus de détails, voir la page 88.

(4) An extensive revision of the weight and price sample (including the incorporation of goods purchased and resold in same condition as purchased) necessitated by developments in the industry's production pattern since 1961 have resulted in the introduction of new price indexes and a discontinuity in the industry price index. — Une révision approfondie de l'échantillon des pondérations et des prix (y compris l'intégration des biens achetés et revendus sans aucune modification), nécessitée par l'évolution du régime de production de l'industrie depuis 1961, a amené l'adoption de nouveaux indices des prix ainsi qu'une solution de continuité dans l'indice des prix industriels.

	Old Series — Ancienne série	New series — Nouvelle série
December — 1970 — Décembre	95.1	92.3
January — 1971 — Janvier	95.1	92.1
Average — 1971 — Moyenne	95.2	91.8

- (5) This series has been revised from January 1969 forward. An expanded list of establishments and commodities has been selected and prices for these have been aggregated to a total industry index using 1971 shipments data. The price quotations are, in general, of an improved quality. Selected commodity data on a 1971 time and weight base, are available on request. — Les chiffres de cette série ont été révisés à partir de janvier 1969. Une liste augmentée des établissements et des produits a été établie, et les prix de ces produits ont été agrégés pour former un indice total de l'activité économique à partir des données sur les livraisons de 1971. De manière générale, le calcul des prix est plus fiable. Les utilisateurs peuvent obtenir sur demande des données sur certains produits utilisant les facteurs de pondération de 1971 et dont la période de référence est 1971.
- (6) Motor gasoline prices are 'List' and may not be a reflection of actual transaction prices. — Les prix de l'essence sont des prix de détail suggérés et peuvent ne pas traduire les prix réels à la transaction.
- (7) Gross weighted, including inter-industry shipments. For explanation see page 88. — Indice pondéré brut comprenant les livraisons inter-industrielles. Pour toute explication voir page 88.

ALL-ITEMS Consumer Price Index Converted to 1949=100 - October 1974 - L'indice des prix à la consommation de tous les éléments converti à 1949=100 - Octobre 1974 222.5

(1) Indexes prior to May 1973 incorporate 1957 expenditure weights, those for May 1973 forward are based on 1967 expenditures. The revised series is linked to its predecessor at April 1973. For further explanation, see page 92. - Avant mai 1973 les indices étaient calculés à l'aide des pondérations fondées sur les dépenses de 1957; à partir de mai 1973 ils sont calculés à l'aide des pondérations fondées sur les dépenses de 1967. Les séries révisées sont raccordées aux précédentes en avril 1973. Pour plus de renseignements, voir page 92.

Health, personal care, and clothing services - Hygiène, soins personnels et services vestimentaires	202.5	199.9	178.0	176.1	173.3	161.9	152.7
Recreation, education, and communication services - Loisirs, formation et communications	164.5	161.6	153.3	152.0	151.2	144.7	137.9
Transportation services - Transports	199.2	199.7	182.4	182.8	179.2	174.8	168.1

(1) Indexes prior to May 1973 incorporate 1957 expenditures weights, those for May 1973 forward are based on 1967 expenditures. The revised series is linked to its predecessor at April 1973. For further explanation see page 92. - Avant mai 1973 les indices étaient calculés à l'aide des pondérations fondées sur les dépenses de 1957; à partir de mai 1973 ils sont calculés à l'aide des pondérations fondées sur les dépenses de 1967. Les séries révisées sont raccordées aux précédentes en avril 1973. Pour plus de renseignements, voir page 92.

(2) Excludes accessories and notions. - Ne comprend pas les accessoires et menus articles.

(3) Includes clothing accessories and notions. - Comprend les accessoires et menus articles vestimentaires.

(4) Includes constant weighted food component. - Comprend l'élément aliments calculé à l'aide de pondérations constantes.

TABLE 11. Consumer Price Indexes, Regional Cities(1)

TABLEAU 11. Indices des prix à la consommation, agglomérations urbaines(1)

1961=100

Note: (i) These indexes measure within each city the percentage change in consumer prices from the base period to the subsequent time periods. They cannot be used to compare levels of prices between cities. (ii) For inter-city indexes of retail price differentials refer to Table 14. - **Nota:** (i) Les indices mesurent dans chaque ville le pourcentage de variation des prix à la consommation depuis la période de base jusqu'à des périodes subséquentes. Ils ne peuvent servir à comparer les niveaux des prix d'une ville à l'autre. (ii) Pour les indices comparatifs des prix de détail, se reporter au tableau 14.

(1) Indexes prior to May 1973 incorporate 1957 expenditure weights, those for May 1973 forward are based on 1967 expenditure. The revised series is linked to its predecessor at April 1973. For further explanation, see page 92. - Avant mai 1973 les indices étaient calculés à l'aide des pondérations fondées sur les dépenses de 1957; à partir de mai 1973 ils sont calculés à l'aide des pondérations fondées sur les dépenses de 1967. Les séries révisées sont raccordées aux précédentes en avril 1973. Pour plus de renseignements, voir page 92.

(2) Until April 1973, the shelter element of regional cities' housing indexes moved on the basis of changes in rents only. However, from May 1973 on, homeownership has been included in the shelter element of regional cities' housing indexes, so that the Canada and regional city shelter indexes now contain the same elements. See also page 93. - Jusqu'en avril 1973, l'élément logement des indices de l'habitation des agglomérations urbaines était basé uniquement sur les variations des loyers. Toutefois, depuis mai 1973, les frais de possession d'une maison ont été incorporés à l'élément logement des indices de l'habitation des agglomérations urbaines; il en résulte que les indices du logement pour le Canada et pour les agglomérations urbaines comportent maintenant les mêmes éléments. Voir aussi la page 93.

(3) Includes shelter and household operation. Until April 1973, the shelter element of regional cities' housing indexes moved on the basis of changes in rents only. However, from May 1973 on, homeownership has been included in the shelter element of regional cities' housing indexes, so that the Canada and regional city shelter indexes now contain the same elements. See also page 93. - Comprend le logement et l'entretien du ménage. Jusqu'en avril 1973, l'élément logement des indices de l'habitation des agglomérations urbaines était basé uniquement sur les variations des loyers. Toutefois, depuis mai 1973, les frais de possession d'une maison ont été incorporés à l'élément logement des indices de l'habitation des agglomérations urbaines; il en résulte que les indices du logement pour le Canada et pour les agglomérations urbaines comportent maintenant les mêmes éléments. Voir aussi la page 93.

Dec.	131.9	153.7	124.1	121.2	131.8	132.1	126.2	116.4

(1) Indexes prior to May 1973 incorporate 1964 expenditure weights, those for May 1973 forward are based on 1967 expenditures. The revised series is linked to its predecessor at April 1973. For further explanation, see page 92. - Avant mai 1973 les indices étaient calculés à l'aide des pondérations fondées sur les dépenses de 1964; à partir de mai 1973 ils sont calculés à l'aide des pondérations fondées sur les dépenses de 1967. Les séries révisées sont raccordées aux précédentes en avril 1973. Pour plus de renseignements, voir page 92.

(2) Includes shelter and household operation. Until April 1973, the shelter element of regional cities housing indexes moved on the basis of changes in rents only. However, from May 1973 on, homeownership has been included in the shelter element of regional cities' housing indexes, so that the Canada and regional city shelter indexes now contain the same elements. See also page 93. - Comprend le logement et l'entretien du ménage. Jusqu'en avril 1973, l'élément logement des indices de l'habitation des agglomérations urbaines était basé uniquement sur les variations des loyers. Toutefois, depuis mai 1973, les frais de possession d'une maison ont été incorporés à l'élément logement des indices de l'habitation des agglomérations urbaines; il en résulte que les indices du logement pour le Canada et pour les agglomérations urbaines comportent maintenant les mêmes éléments. Voir aussi la page 93.

(1) Indexes for 1974 are subject to revision. Les indices pour 1974 sont sujets à révision.

(2) The Canada Index is the weighted average of the General Contractors and the Sub-trade Contractors Indexes as well as being the weighted average of the regional indexes. L'indice pour le Canada est la moyenne pondérée des indices des entrepreneurs généraux et sous-traitants. Il correspond également à la moyenne pondérée des indices régionaux.

(1) Indexes for 1974 are subject to revision. - Les indices pour 1974 sont sujets à révision.

(2) From Table 18. For explanation of recent revisions see Vol 1, No. 7 of Construction Price Statistics, Service Bulletin 62-006. - Du tableau 18. Pour une explication des récentes révisions voir Vol 1, No. 7 du bulletin de service "Statistique des prix dans la construction" 62-006.

(3) National Income and Expenditure Accounts, Catalogue 13-001, quarterly. - (No. 13-001 au catalogue, trimestriel).

(4) Indexes for 1973 and 1974 are subject to revision. - Les indices pour 1973 et 1974 sont sujets à révision.

(5) From Table 19. For explanation of recent revisions see Vol 1, No. 10 of Construction Price Statistics, Service Bulletin 62-006. - Du tableau 19. Pour une explication des récentes révisions voir Vol 1, No. 10 du bulletin de service "Statistique des prix dans la construction" 62-006.

(6) This series contains an engineering component as well as a building component, and is therefore not precisely comparable in coverage with the non-residential composite index. The implicit price indexes are adjusted for changes in contractors profit and productivity. - Cette série comprend une composante génie aussi bien qu'une composante construction: elle n'a donc pas tout à fait la même portée que l'indice synthétique pour la construction non-résidentielle. Les indices synthétiques sont corrigés des variations des profits et de la productivité des entrepreneurs.

Saskatchewan	168.1	137.6	124.9	132.1	144.9	147.1	154.6	
British Columbia - Colombie- Britannique	129.7	119.4	126.6	143.2	134.4	139.0	142.0	

- (1) To assist comparison with other published series the indexes presented have been arithmetically converted from 1956=100 to 1961=100. The 1956=100 indexes are available on request. - Pour faciliter la comparaison avec d'autres séries publiées, ces indices ont été recalculés sur la base 1961=100. Les indices originaux (1956=100) sont disponibles.
- (2) The years refer to fiscal years. Thus 1961 refers to the period April 1, 1961 to March 31, 1962. - Années financières; par exemple, 1961 couvre la période du 1er avril 1961 au 31 mars 1962.
- (3) Major components for the provincial indexes are presented annually in Construction Price Statistics, Service Bulletin No. 62-006. - Les principaux éléments des indices pour les provinces sont publiés annuellement dans le bulletin de service, Statistiques des Prix dans la Construction, no 62-006.
- (4) Direct comparisons should not be made between this index and the highway index published by the Ontario Department of Transportation & Communications. The item content of the indexes is different. - On ne peut comparer directement cet indice avec celui de la voirie publié par le Département du transport et des communications de l'Ontario. Les éléments des deux indices sont différents.

Explanation of Methods Used and Additional Sources for Price Series

Industrial Price Indexes

Industry Selling Price Indexes (1961 = 100)

Industry selling price indexes are published for approximately 100 industries within manufacturing. Also published are approximately 425 commodity price indexes for the products of these industries. The Classification system is that of the 1960 standard industrial classification, thus permitting the joint use of price statistics with other data such as production and employment similarly classified.

The data upon which both the initial selection of commodities to be priced and responding firms are made are contained in the Census of Manufacturers, a series of annual surveys collecting statistics on shipments of commodities, employment and materials used. Prices are collected on the 15th of each month or the nearest transaction date for the commodity being priced; sales and excise taxes are excluded.

The industry classified price indexes are useful for analysis of price movements, for estimation of the constant dollar value of shipments, and for purposes of contract escalations.

A complete description of these indexes is contained in: Industry Selling Price Indexes 1956-68, Catalogue No. 62-528.

Industry Selling Price Index: Manufacturing

The index is gross weighted. It measures the movements of prices of gross shipments of manufacturing industries, including inter-industry shipments between individual industries within manufacturing. Therefore, it duplicates the movements of some prices in the sense that, for example, flour prices are given full weight as part of the shipments of the Flour Mills Industry and then are implicitly counted again through full weighting of the shipment prices of those manufacturing industries which use flour as an ingredient in their outputs, e.g., bread, biscuits, cakes, etc.

"Iron & Steel Mills:" 12-2910

The principal change in the index is as follows: From January 1973 forward prices collected from the various companies are, for any given commodity, weighted together in a way that reflects the relative importance of each company's shipments of the commodity to the total shipments of that commodity by all companies in the year 1971. In addition prices for stainless products were deleted from the series bars hot rolled etc. (12-2910-082), in September 1972 and from the series sheets and strip cold rolled etc. (12-2910-084) in October 1972. Prices for stainless products, however, are included in the price index for the iron and steel mills industry.

The concept of price change measured is net return to mill.

Explication des méthodes utilisées et sources supplémentaires des séries de prix

Indices des prix industriels

Indices des prix de vente dans l'industrie (1961 = 100)

Les indices des prix de vente dans l'industrie sont publiés pour environ 100 industries manufacturières. Près de 425 indices des prix des produits de ces industries sont également publiés. Les produits sont classés d'après la Classification type des industries de 1960, ce qui permet d'utiliser la statistique des prix avec d'autres données telles que la production et l'emploi classées de la même manière.

Les données sur lesquelles se fonde le choix initial des produits dont il faut déterminer le prix et des établissements enquêtés figurent dans le "recensement des manufactures", série de bulletins sur les enquêtes annuelles au cours desquelles on recueille des statistiques sur les expéditions de produits, sur l'emploi et sur les matières utilisées. La collecte des prix a lieu le 15 de chaque mois ou à la date de transaction la plus rapprochée pour le produit en question; les taxes de vente et droits d'accise ne sont pas pris en compte.

Les indices des prix classés par industrie servent à analyser les mouvements de prix, à estimer la valeur des expéditions en dollars constants et à indexer les contrats.

La description complète de ces indices est donnée dans "Indices des prix de vente dans l'industrie, 1956-68", numéro 62-528 au catalogue.

Indices des prix de vente dans l'industrie: Industries manufacturières

Il s'agit d'un indice pondéré brut. Il mesure les mouvements du prix des livraisons brutes des industries manufacturières, y compris les livraisons inter-industrielles des industries manufacturières. Il prend donc deux fois en compte les mouvements de certains prix: les prix de la farine, par exemple, font l'objet d'une pondération complète comme ayant trait aux livraisons des meuneries et ils sont comptés à nouveau implicitement du fait de la pondération complète des prix de livraisons des industries manufacturières qui utilisent de la farine comme ingrédient de leurs produits, tels que le pain, les biscuits ou les gâteaux.

"Sidérurgie:" 12-2910

Le principal changement apporté à l'indice est le suivant: depuis janvier 1973, les prix recueillis auprès des différentes sociétés sont, pour tout produit, pondérés de manière à refléter l'importance relative des livraisons de chaque société par rapport aux livraisons totales de ce produit par toutes les sociétés en 1971. En outre, les prix des produits en acier inoxydable ont été enlevés de la série "barres, laminés à chaud, etc." (12-2910-082) en septembre 1972 et de la série "tôles et feuillards, laminés à froid etc." (12-2910-084) en octobre 1972. Ils sont toutefois compris dans l'indice des prix de l'industrie de la sidérurgie.

Le concept de la mesure de la variation des prix se fonde sur le revenu net à l'usine.

Purchase Price Indexes of Secondary Metals (1969 = 100)

Ferrous and non-ferrous indexes are compiled from a series of input prices, inclusive of transportation and brokerage fees, submitted by a wide variety of purchasers from selected industries. Indexes for certain categories of metals cannot be published because of the confidentiality of the data under the Statistics Act.

Canadian Farm Products Price Index (1935-39 = 100)

Prices of Western grains used in the index are Canadian Wheat Board buying prices for the grades listed below. Initial payments are first used in the index calculation and are revised as further payments are announced.

Final payments for the crop year August 1972 — July 1973 were announced on November 6, 1973 for wheat, oats and barley. The estimates of Final payments for the 1973-74 crop year are based on wheat Board predictions of April 1974.

Indices du prix d'achat des métaux de deuxième fusion (1969 = 100)

L'indice des métaux ferreux et non ferreux est établi à partir d'une série de prix comprenant les frais de transport et de dédouanement; ces données sont fournies par un large éventail de clients de certaines industries. Confidentiels en vertu de la Loi sur la statistique, les indices de certaines catégories de métaux ne peuvent être publiés.

Indice des prix des produits agricoles canadiens (1935-39 = 100)

Les prix des céréales de l'Ouest figurant dans l'indice représentent les prix à l'acheteur de la Commission canadienne du blé pour les catégories énumérées ci dessous. Les paiements initiaux servent d'abord au calcul de l'indice et sont ensuite révisés lorsque d'autres paiements sont annoncés.

Les prix définitifs pour la campagne allant d'août 1972 à juillet 1973 ont été annoncés le 6 novembre 1973, en ce qui concerne le blé, l'avoine et l'orge. Les estimations des paiements totaux pour la campagne agricole 1973-74 sont fondées sur les prévisions d'avril 1974 de la Commission canadienne du blé.

Used in original indexes from Aug. 1972 to July 1973. — Utilisé dans les premiers indices d'août 1972 jusqu'en juillet 1973.
Incorporated retroactively in revised final indexes Aug. 1972 to July 1973. — Inclus rétroactivement dans les indices finals révisés d'août 1972 à juillet 1973.
Used in current indexes. — Utilisé dans les indices courants.

General Wholesale Index (1935-39 = 100)

The General Wholesale Index is a commodity classified index of prices. The index is "general" inasmuch as it incorporates a diverse selection of both primary and processed commodities. It is called "wholesale" because its ingredient prices relate to that broad and heterogeneous area of commodity distribution which excludes only retail trade. In fact, the term "wholesale" has more of a connotation of bulk trading than of any homogeneous level of distribution. Thus, though the index mainly includes prices of producers, it also covers transactions of "middle men" who trade in commodities of a type or in quantities characteristic of primary marketing functions.

Though general wholesale price indexes have been calculated by many countries for years there is no precise answer to the question of what such an index measures. This is so because the index cannot be associated with any adequately definable value aggregate. Unlike a consumer price index which can be identified with expenditures of household consumers, a general wholesale index covers a host of overlapping transactions sometimes involving the same ingredient in as many as three different stages of processing. Yet, conceptually, it is not a measure of the purchasing power of money because it omits significant areas of monetary transactions such as prices of land, labour, securities and services, except in so far as prices of these things are implicit in commodity prices. As a conventional summary figure, its use has tended towards a reference level against which to observe the behaviour of particular price groups such as farm products, industrial materials, building materials and the various other groupings for which indexes are published. And as an indicator of general business conditions it is usually included in the group which is regarded as approximately coincident with the business cycle. However, its main attribute now lies in its long historical continuity.

For further details about the General Wholesale Index please consult: *Wholesale Price Indexes 1913-50* (Reference Paper No. 24) *Prices and Price Indexes 1949-52* (Vol. 23) (Catalogue No. 62-501).

Thirty Industrial Materials, (1935-39 = 100)

The price index of thirty industrial materials is calculated as an unweighted geometric average of prices of the selected commodities. The formula is as follows:

$$\sqrt[30]{P^1_{tN} \times P^2_{tN} \times P^3_{tN} \times \dots \times P^{30}_{tN}}$$

$$\sqrt[30]{P^1_{t \text{ 35-39}} \times P^2_{t \text{ 35-39}} \times P^3_{t \text{ 35-39}} \times \dots \times P^{30}_{t \text{ 35-39}}}$$

Indice général des prix de gros (1935-39 = 100)

L'indice général des prix de gros est un indice des prix classés par produit. Cet indice est "général" du fait qu'il comprend une variété de produits primaires et de produits transformés. Il est appelé "de gros" parce que les prix qui le composent se rapportent au domaine vaste et hétérogène de la distribution des produits dont seul le commerce de détail est exclu. En réalité l'expression "de gros" fait penser plus au commerce de gros qu'au niveau homogène de distribution. Bien que l'indice comprenne surtout les prix établis par les producteurs, il englobe également les transactions des "intermédiaires" qui vendent des produits dont le genre et la qualité sont particuliers aux fonctions premières de la commercialisation.

De nombreux pays calculent l'indice général des prix de gros depuis des années; il n'en reste pas moins impossible de dire exactement ce que cet indice mesure, car on ne peut l'associer à une valeur globale que l'on puisse définir exactement. Contrairement à l'indice des prix à la consommation que l'on peut identifier grâce aux dépenses des ménages, l'indice général des prix de gros couvre une foule de transactions à double emploi impliquant parfois le même élément considéré jusqu'à trois étapes différentes de la transformation. Cependant, du point de vue conceptuel, cet indice ne constitue pas une mesure du pouvoir d'achat du dollar parce qu'il ne tient pas compte de transactions monétaires aussi importantes que le prix du terrain, du travail, des valeurs mobilières et des services, sauf si elles sont comprises dans le prix des produits. En tant que chiffre représentatif classique, on a eu tendance à s'en servir pour comparer le comportement de certains groupes de prix, par exemple, celui des produits agricoles, des matières industrielles, des matériaux de construction et de divers autres groupes pour lesquels on publie des indices. Comme indicateur de la situation générale du commerce, l'indice est habituellement intégré au groupe dont on considère qu'il correspond le plus exactement au cycle commercial. Sa qualité principale réside cependant dans sa longue continuité chronologique.

Pour plus de détails sur l'indice général des prix de gros, consulter *Wholesale Price Indexes 1913-50* (Reference Paper No. 24) et *Prices and Price Indexes 1949-52* (Vol. 23) (no 62-501 au catalogue).

Indice des prix de trente matières industrielles (1935-39 = 100)

L'Indice des prix de trente matières industrielles est calculé comme moyenne géométrique non pondérée des prix de certaines marchandises. La formule est la suivante:

$$\sqrt[30]{P^1_{tN} \times P^2_{tN} \times P^3_{tN} \times \dots \times P^{30}_{tN}}$$

$$\sqrt[30]{P^1_{t \text{ 35-39}} \times P^2_{t \text{ 35-39}} \times P^3_{t \text{ 35-39}} \times \dots \times P^{30}_{t \text{ 35-39}}}$$

The selection of materials for pricing relates to groups such as “stable” prices, numbering 12, food prices, numbering 5 and “sensitive” prices, numbering 13. We plan to construct an index of industrial prices that will relate to current usage of materials and that will be of the more traditional Laspeyre’s type in its construction. The presently published index contains prices for some materials that no longer constitute important industrial inputs.

The Consumer Price Index for Canada (1961=100)

The Consumer Price Index measures the percentage change through time in the cost of purchasing a constant “basket” of goods and services representing the purchases by a particular population group in a specified time period. The “basket” is an unchanging or equivalent quantity and quality of goods and services, consisting of items for which there are continually measurable market prices over time.

The index relates to a broad but specific group of urban families and reflects the price changes experienced by that “target group”. The index may not represent closely the experience of any one specific family within the group, nor should it be expected to reflect price change for other population groups for which income, family size and place of residence are characteristically different. The target group to which the current index relates is composed of families — (a) living in cities with over 30,000 population, (b) ranging in size from two to six persons and (c) with annual incomes in 1967 ranging from \$4,000 to \$12,000. To measure the influences of price change on the cost of goods and services purchased by such families, the Consumer Price Index reflects movements of some 300 items.

The history of consumer price indexes in Canada extends back to the early 1900’s and encompasses periodic revisions of index base reference periods and weighting patterns. In January 1969, the time base was updated to 1961=100 from 1949=100; details are contained in the January 1969 issue of the monthly publication *Prices and Price Indexes*, Catalogue 62-002.

From March 1961 to April 1973 inclusive, the weights or relative importance of the items in the Consumer Price Index were based on 1957 family expenditure patterns; details of these weights can be found in *The Consumer Price Index for Canada (1949=100) (Revision Based on 1957 Expenditures)*, Catalogue 62-518. A subsequent weight revision to reflect 1967 family expenditure patterns (and within the food component, 1969 detailed spending habits) was introduced in May 1973. Full details of the latest weighting pattern and other background information on the Consumer Price Index is available in the occasional paper *The Consumer Price Index for Canada (1961=100) (Revision Based on 1967 Expenditures)*, Catalogue 62-539.

Le choix des matières servant au prélèvement des prix et se rapportant à des groupes tels que prix “stables”, (12 matières), prix des aliments (5 matières) et prix “variables” (13 matières). Nous projetons d’établir un indice des prix industriels qui se rapportera à l’utilisation courante des matières et dont la structure se rapprochera plus du type Laspeyres plus traditionnel. L’indice publié ici renferme les prix de certaines matières qui ne sont plus considérées comme intrants importants dans l’industrie.

L’indice des prix à la consommation pour le Canada (1961=100)

L’indice des prix à la consommation mesure le taux de variation dans le temps du coût à l’achat d’un “panier” constant de biens et de services représentant les achats d’un groupe déterminé de la population au cours d’une période donnée. Le “panier” est constitué par des biens et des services en quantité et de qualité constantes; il comprend uniquement les biens et services qui ont un prix et dont les prix peuvent être observés de façon continue.

L’indice se rapporte à un groupe vaste, mais délimité, de familles urbaines et rend compte des changements de prix auxquels ce “groupe cible” doit faire face. L’indice peut ne pas suivre de près les changements de prix touchant une famille en particulier de ce groupe, pas plus que les changements de prix touchant d’autres groupes de la population dont le revenu, la taille des familles ou les lieux de résidence diffèrent sensiblement. Le groupe cible auquel se rapporte l’indice actuel se compose de familles a) vivant dans des villes de plus de 30,000 habitants, b) dont la taille est comprise entre deux et six personnes, et c) dont les revenus annuels en 1967 étaient compris entre \$4,000 et \$12,000. Afin de mesurer les effets de changements de prix sur le coût des biens et des services achetés par ces familles, l’indice des prix à la consommation suit les mouvements de quelque 300 articles.

L’histoire des indices de prix à la consommation au Canada remonte au début des années 1900, et elle comprend des révisions périodiques des périodes de référence de base de l’indice ainsi que des schémas de pondération. En janvier 1969, on a aligné la base de temps de 1949=100 à 1961=100; d’autres renseignements figurent dans l’édition de janvier 1969 de la publication mensuelle *Prix et indices des prix* (numéro 62-002 au catalogue).

De mars 1961 à avril 1973 inclusivement, les poids, ou l’importance relative des éléments de l’indice des prix à la consommation étaient basés sur les tendances de dépense des familles pour 1957; on peut trouver le détail de ces poids dans la publication *The Consumer Price Index for Canada (1949=100) (Revision based on 1957 Expenditure)*, numéro 62-518 au catalogue. En mai 1973, on a introduit une nouvelle révision des poids afin de prendre en compte les tendances de consommation des familles en 1967 (et, dans l’élément aliments, les habitudes détaillées de dépense en 1969). Le détail complet du dernier schéma de pondération et d’autres renseignements fondamentaux sur l’indice des prix à la consommation figurent dans la publication hors série *L’indice des prix à la consommation du Canada (1961=100) (Révision fondée sur les dépenses de 1967)*, numéro 62-539 au catalogue.

The Consumer Price Index for Canada Reclassified by Goods and Services

A revised supplementary classification system, entitled "The Consumer Price Index Reclassified by Goods and Services", was introduced in May 1973 with the revision of the weighting pattern of the Consumer Price Index to reflect 1967 expenditures.

This supplementary classification introduces an improved framework for regrouping the items which comprise the Index. In it, all items in the C.P.I. have been reclassified into two major categories — goods and services — according to their most characteristic or dominant attribute. The goods component has been sub-divided into three categories: durable, semi-durable, and non-durable goods, according to expected average useful lifetime criteria. Services, on the other hand, have been sub-divided according to broad functional categories.

Historical series conforming to the revised classification system replace the previously published supplementary indexes and are available, with explanatory notes, for the period January 1961 to April 1973 inclusive, in *Retail Prices and Living Costs Service Bulletin*, Catalogue 62-005, Vol. 2 No. 7.

Consumer Price Indexes for Regional Cities (1961=100)

Consumer Price Indexes for Regional Cities are published monthly in this bulletin (Table 11). Except for their individual weighting systems, and the fact that they are based on fewer quotations, the regional city indexes are generally similar in concept and item coverage to the Consumer Price Index for Canada.

Prior to May 1973, the city indexes may have underestimated the degree of price movements occurring because the shelter component of the city indexes moved on the basis of changes in rents only, whereas changes in both rents and homeownership costs were, and continue to be, included in the Canada index. As a result of homeownership costs having increased more rapidly than rents, the housing and the all-items indexes for cities tended to underestimate somewhat the rates of price increase particularly over longer periods. From May 1973 forward, however, homeownership costs are included in the regional city consumer price indexes so that the Canada and the regional city indexes are consistent in terms of their content and treatment.

Each city index is designed to measure the influence of changes in retail prices taking place in the locality specified, upon the cost of a fixed basket of goods and services representing the level of consumption of a representative group of families in the particular area specified.

In using the city indexes, it should be remembered that *they do not in any way indicate whether price levels are higher or lower in one city than in another*. Rather, they measure, *within each city*, the percentage change in consumer prices from the base period to subsequent time periods.

L'indice des prix à la consommation au Canada reclassé par biens et services

Un système révisé de classification supplémentaire, intitulé "L'indice des prix à la consommation au Canada reclassé par biens et services", a été introduit en mai 1973 en même temps que la révision des schémas de pondération de l'indice des prix à la consommation afin de rendre compte des dépenses de 1967.

Cette classification supplémentaire regroupe dans un cadre amélioré les éléments de l'indice. En effet, tous les éléments de l'I.P.C. ont été reclassés dans deux grandes catégories, soit la catégorie des biens et celle des services, suivant leur caractère le plus distinctif ou dominant. La catégorie des biens présente trois sous-catégories (biens durables, biens semi-durables, biens non durables) déterminées en fonction de la vie utile moyenne prévisible. D'autre part, on a réparti les services suivant quelques grandes catégories fonctionnelles.

Les séries historiques conformes au système révisé de classification remplacent les indices supplémentaires publiés auparavant, et on peut les trouver, avec des notes explicatives, pour la période janvier 1961-avril 1973, dans la publication "Prix de détail et coût de la vie" - Bulletin de service, numéro 62-005 au catalogue, vol. 2 no 7.

Indices des prix de la consommation dans certaines agglomérations urbaines (1961=100)

Ces indices sont publiés tous les mois dans la présente publication (Tableau 11). À l'exception de leurs systèmes de pondération particuliers, et de ce qu'ils font appel à moins de prix, ces indices sont en général semblables par leur concept et par les éléments qui les composent à l'indice des prix à la consommation au Canada.

Avant mai 1973, les indices des agglomérations ont pu sous-estimer le degré de changement des prix, parce que l'élément logement des indices des agglomérations ne variait qu'en fonction de l'évolution des loyers, tandis que l'indice pour le Canada ne comprenait et ne comprend toujours que les changements des loyers et les coûts de propriété. Comme les coûts de propriété ont augmenté plus vite que les loyers, les indices du logement et l'ensemble pour les villes tendent à sous-estimer quelque peu les taux de croissance des prix, principalement sur des périodes plus longues. À partir de mai 1973, cependant, les coûts de propriété sont inclus dans les indices de prix à la consommation des agglomérations urbaines, de sorte que les indices pour le Canada et les agglomérations urbaines sont homogènes à la fois pour ce qui est de leur contenu et de leur traitement.

Chaque indice de ville est conçu de manière à mesurer l'effet des changements des prix de détail dans la ville en question sur les prix d'un panier constant de biens et de services représentant le niveau de consommation d'un groupe représentatif de familles dans cette ville.

Le lecteur devra toujours garder en mémoire que ces indices *n'indiquent en aucune façon si les prix sont plus élevés dans une ville que dans une autre*. Ils mesurent plutôt *dans chaque ville* le taux de variation des prix à la consommation à partir de la période de base et des périodes subséquentes.

For comparisons of retail price differentials between cities, see Table 14 of this publication and the relevant explanatory notes.

Purchasing Power of the 1961 Consumer Dollar

As consumer prices rise, the sum of money required to purchase an unchanging or equivalent quantity and quality of goods and services increases, and the amount of these items that can be purchased with a fixed sum of money decreases. Conversely, as prices fall, the amount of goods and services that can be purchased with a fixed sum of money increases. Thus, rising prices are associated with declining purchasing power of money and falling prices are associated with its increasing purchasing power.

The purchasing power of the consumer dollar, in other words, bears an inverse relationship to the movement of the Consumer Price Index. For example, by January 1973, compared with their average level in 1961, consumer prices as measured by the C.P.I. were 44.5% higher, so that an equivalent basket of goods and services which could be purchased for \$100.00 in 1961 would cost the consumer \$144.50 in January 1973. Each consumer dollar in January 1973, therefore, buys less than in 1961, and the amount of its reduced value can be expressed in terms of the inverse consumer price movement. Thus, in January 1973 the purchasing power of the 1961 consumer dollar declined to approximately 69 cents ($\$1.00 \times 100.0/144.5 = \0.69).

Users of the tabulation which shows the purchasing power of the 1961 consumer dollar at different points in time (Table 12) should note that, as in the case of the Consumer Price Index from which it is derived, it may not represent closely the experience of any one specific family within the large group to which the C.P.I. relates; nor should it be expected to reflect the experience of other population groups whose income, family size and place of residence are characteristically different. It should also be noted that, like the C.P.I., it is not directly affected by changes in income tax, unemployment insurance premiums and certain other security payments.

Measuring the Purchasing Power of Wages

Changing consumer price levels affect the amounts of consumer goods and services which a dollar will buy, and average wages, insofar as they are spent on such items will, of course, be affected in the same way. A wage measurement which takes the change of consumer prices into account, can be calculated by reducing actual average wages by the percentage rise in consumer price levels, or increasing them by the amount price levels fall. Wages thus adjusted may be used to indicate the comparative purchasing power of average earnings if consumer price levels and consumption patterns had remained constant. The following illustration shows how this kind of an adjustment can be made.

Suppose that a series of average weekly wages rises from \$80.00 in week A to \$100.00 in week B, and that in the same interval a consumer price index advances from 100 to 110.0. Because of the 10% rise in consumer prices, \$1.00 will not buy as much in week B as it would in week A. On the

Pour étudier les différences de prix de détail entre les villes, il faut consulter le tableau 14 de la présente publication et les notes explicatives qui l'accompagnent.

Pouvoir d'achat du dollar de consommation 1961

À mesure que les prix à la consommation montent, la somme nécessaire à l'achat d'une quantité et d'une qualité constantes ou équivalentes de biens et de services augmente, et la quantité de ces articles qui peut être acheté avec une somme d'argent fixe diminue. Inversement, à mesure que les prix baissent, la quantité de biens et de services qui peut être achetée avec une somme d'argent constante augmente. Ainsi, la hausse des prix est liée à la baisse du pouvoir d'achat de la monnaie, et la baisse des prix est liée à la hausse du pouvoir d'achat.

Le pouvoir d'achat du dollar de consommation, en d'autres termes, évolue en raison inverse du mouvement de l'indice des prix à la consommation. Ainsi, en janvier 1973, par rapport au niveau de 1961, les prix à la consommation mesurés par l'I.P.C. avaient progressé de 44.5%, de sorte qu'un panier équivalent de biens et de services qui coûtait \$100 à l'achat en 1961 aurait coûté \$144.50 en janvier 1973 au consommateur. Par conséquent, chaque dollar de consommation en janvier 1973 achète moins qu'en 1961, et l'on peut exprimer le montant de sa valeur réduite en fonction de l'inverse du mouvement des prix à la consommation. Ainsi, en janvier 1973, le pouvoir d'achat du dollar de consommation 1961 était tombé approximativement à 69 cents ($\$1.00 \times 100.0/144.5 = \0.69).

Les utilisateurs du tableau qui indique le pouvoir d'achat du dollar de consommation de 1961 à différentes périodes (tableau 12) doivent noter que, comme dans le cas de l'indice des prix à la consommation dont il a été tiré, il peut ne pas suivre de près le cas d'une famille en particulier faisant partie du grand groupe auquel se rapporte l'I.P.C., pas plus qu'il ne rend nécessairement compte des dépenses d'autres groupes de la population dont les revenus, la taille des familles et les lieux de résidence diffèrent sensiblement. Il faut également noter que, tout comme l'I.P.C., in n'est pas touché directement par les changements de l'impôt sur le revenu, les primes d'assurance-chômage et certains autres paiements d'assistance.

Mesure du pouvoir d'achat des salaires

Les changements du niveau des prix à la consommation affectent les quantités de biens et de services de consommation qu'un dollar peut acheter, et les salaires moyens, dans la mesure où ils sont consacrés à de tels articles, seront naturellement touchés de la même façon. Une mesure des salaires qui prendrait en compte les changements de prix à la consommation peut se calculer en réduisant les salaires moyens réels du taux d'accroissement des prix à la consommation, ou en les augmentant dans une proportion égale à la baisse des prix. Les salaires ainsi ajustés peuvent servir à indiquer le pouvoir d'achat comparatif des gains moyens si les prix à la consommation et les tendances de consommation étaient restés constants. L'exemple suivant montre comment on peut procéder à un ajustement de cette nature.

Supposons qu'une série de salaires hebdomadaires moyens passe de \$80 pendant la semaine A à \$100 au cours de la semaine B, et qu'au cours de la même période un indice des prix à la consommation passe de 100 à 110. Par suite de la hausse de 10% des prix à la consommation, \$1 n'achètera pas autant au cours de

other hand, the 25% rise from \$80.00 to \$100.00 will overstate the increase which has occurred in the purchasing power of average weekly wages. This overstatement can be removed by reducing the figure of \$100.00 by the amount of the consumer price index increase. The adjusted average is \$90.91 $((100.0/110.0) \times \$100)$, which may be referred to as a weekly wage average for week B expressed in the dollars of period A; or it may be said to indicate the level of real weekly wages relative to week A.

The foregoing calculation can be carried a step further to express, in index number form, the relationship between the week A average of \$80.00 and the week B adjusted figure of \$90.91. Assuming the week A average of \$80.00 as an index equal to 100, the week B index becomes 113.6 $((90.91/80.00) \times 100)$. Such an index may be called an index of average weekly real wages. It indicates that average wages for week B will buy 13.6% more goods and services than they did in week A, in spite of a 10% rise in consumer prices. This 13.6% increase in real wages compares with the 25% rise in money wages $((\$100.00 - \$80.00 / \$80.00) \times 100)$.

In Table 13, the index numbers of average weekly wages in manufacturing in current dollar terms (1961 = 100) are calculated by dividing the weekly wages in current dollars by the 1961 average weekly wage in current dollars and multiplying the result by one hundred. For example, the weekly wage index for September 1972 in current dollars (1961 = 100) is 196.4 $((146.23/74.45) \times 100)$. The weekly wages in 1961 dollar terms are determined by dividing the weekly wage in current dollars by the consumer price index for Canada for the month following the month to which the wages relate and multiplying the result by one hundred. Thus, the September 1972 weekly wage in 1961 dollars is \$102.98 $((146.23/142.0) \times 100)$. (The wage and the price data both refer to generally similar time periods: current wages for a particular month relate to the last pay periods in that month, while most prices for the consumer price index of the following month are collected in the first week of that month.)

The index numbers of weekly wages in 1961 dollar terms (1961 = 100) are determined by dividing the weekly wages in 1961 dollars by the base (1961) average weekly wage and multiplying the result by one hundred. For example, the September 1972 weekly wage index in 1961 dollar terms (1961 = 100) is 138.3 $((102.98/74.45) \times 100)$.

It should be noted that while the estimates of average real wages may reflect the experiences of broad groups of workers in manufacturing fairly well, their applicability to individual wage-earners depends upon a number of considerations. For example, individual earnings will differ significantly from the group average, depending upon occupation, industry, geographical location, or sex of the wage-earner. Moreover, individual spending habits differ widely, but the consumer price index which is used to adjust the earnings data refers only to the average consumption pattern of a particular population group. Group spending patterns change over periods of time. To the extent that this occurs, the wage data adjusted by the consumer price index (which has a "fixed" consumption pattern), will gradually be ren-

la semaine B qu'au cours de la semaine A. Par contre, la hausse de 25% (de \$80 à \$100) va surévaluer la hausse qui s'est produite dans le pouvoir d'achat des salaires hebdomadaires moyens. Cette surévaluation peut être réduite en réduisant le chiffre de \$100 du montant de l'accroissement de l'indice des prix à la consommation. La moyenne ajustée sera \$90.91 $((100.0/110.0) \times 100)$, et que l'on peut désigner comme étant la moyenne du salaire hebdomadaire pour la semaine B exprimée en dollars de période A; on peut aussi dire qu'elle indique le niveau réel des salaires par rapport à la semaine A.

On peut pousser ce calcul plus loin, en exprimant à l'aide d'un indice, la relation entre le salaire moyen de \$80 de la semaine A, et le salaire révisé de \$90.91 de la semaine B. En supposant que la moyenne de la semaine A soit un indice égal à 100, l'indice de la semaine B devient 113.6 $((90.91/80.00) \times 100)$. On pourrait appeler un tel indice l'indice de la rémunération hebdomadaire effective. Il indique que le salaire moyen pour la semaine B permettra aux consommateurs d'acheter pour 13.6% de plus en biens et services que pendant la semaine A, et ceci, en dépit de l'augmentation de 10% des prix à la consommation. Cette augmentation effective de 13.6% se compare à l'augmentation de 25% des salaires $((\$100.00 - \$80.00 / \$80.00) \times 100)$.

Au Tableau 13, les nombres indices des salaires hebdomadaires moyens dans les industries manufacturières en dollars courants (1961 = 100) s'obtiennent en divisant les salaires hebdomadaires en dollars courants par le salaire hebdomadaire moyen de 1961 en dollars courants et en multipliant le résultat par cent. Ainsi, l'indice des salaires hebdomadaires pour septembre 1972 exprimés en dollars courants (1961 = 100) est 196.4 $((146.23/74.45) \times 100)$. Les salaires hebdomadaires en dollars de 1961 s'obtiennent en divisant les salaires hebdomadaires en dollars courants par l'indice des prix à la consommation pour le Canada pour le mois qui suit celui auquel se rapportent les salaires, et en multipliant le quotient par cent. Ainsi, le salaire hebdomadaire de septembre 1972 exprimé en dollars de 1961 est \$102.98 $((146.23/142.0) \times 100)$. (Les données sur les salaires et les prix portent en général sur des périodes semblables: les salaires courants d'un mois donné sont généralement ceux des dernières périodes de paie du mois, alors que la plupart des prix pour l'indice des prix à la consommation du mois suivant sont recueillis au cours de la première semaine de ce mois.)

Les nombres indices des salaires hebdomadaires en dollars de 1961 (1961 = 100) s'obtiennent en divisant les salaires hebdomadaires en dollars de 1961 par les salaires hebdomadaires moyens de l'année de base (1961) et en multipliant le quotient par cent. Ainsi, l'indice des salaires hebdomadaires pour septembre 1972, exprimés en dollars de 1961 (1961 = 100), sera 138.3 $((102.98/74.45) \times 100)$.

Il convient de souligner que, même si les estimations de salaires réels moyens résument assez bien la situation d'un large éventail de travailleurs dans les industries manufacturières, elle ne peuvent être appliquées aux individus sans quelques précautions. Ainsi, le revenu d'un salarié s'écartera sensiblement de la moyenne du groupe en fonction de sa profession, de l'industrie dans laquelle il travaille, de sa situation géographique ou de son sexe. De plus, les habitudes de consommation varient considérablement d'un individu à l'autre, alors que l'indice des prix à la consommation qui sert à redresser les données sur les gains porte uniquement sur la structure moyenne de consommation d'un groupe déterminé. De même, les habitudes de consommation changent avec le temps. Ainsi, les données sur les gains rajustées par l'indice des prix à la consommation (les habitudes de consom-

considered less valid; the consumer price index weighting pattern was last revised in May 1973, and prior to that, in 1961. Furthermore, some part of income may be saved, and it should be borne in mind that it is not appropriate to reduce savings to a constant dollar basis by using an index which reflects consumption patterns.

It should also be kept in mind that measures of change in real earnings calculated from averages of gross earnings may differ from changes in the purchasing power of "take-home" pay, due to such factors as changes in personal income tax and pay deductions for such things as social insurance and pension plans. Thus index numbers of real wages should not be interpreted as measuring fluctuations in the levels of consumption of wage-earners or wage-earners' families; they are intended to show only the trend in purchasing power of wages over the items covered by the price index, and in addition to the factors already mentioned, do not take into account other family income (including family allowances) or changes in the savings position of families.

The table in this report showing indexes of both actual (current dollar) and real (constant dollar) wages uses 1961 as a reference year. However, any reference period may be chosen as a base since percentage changes between any two periods will be the same regardless of the reference period selected.

Further information regarding Table 13 can be obtained from: Labour Division, Statistics Canada.

Inter-City Retail Price Comparisons

Statistics relating to differences in retail prices between Canadian cities were initially developed for food, and subsequently extended to cover such other elements of the family budget as clothing, transportation, household operation, health and personal care, recreation, education and reading, and tobacco and alcohol. In all, inter-city price comparisons are drawn for commodities and services comprising nearly three-quarters of the budget on which the Consumer Price Index for Canada is currently based with the major omission being shelter (both rented and owned). While recognizing the importance of shelter differentials in any overall comparison of the general price level being encountered by consumers in different urban centres, the problems inherent in drawing valid comparisons between cities are such as to require further research. Meanwhile, it is considered that, despite the absence of shelter differentials at this time, publication of retail price comparisons for other elements of the budget will go some distance towards serving the varied needs of users.

Table 14 presents the results of an updating of earlier spatial retail price measurements to May 1971 and includes more complete data on several cities. A fuller explanation of the study from which this table is derived is contained in the November 1968, November 1969 and April 1972 issues of *Prices and Price Indexes* (Statistics Canada, Catalogue Number 62-002).

matation étant supposées "fixes") perdront graduellement de leur valeur; le schéma de pondération de l'indice des prix à la consommation a été révisé pour la dernière fois en mai 1973, et avant cela, en 1961. De plus, il ne faut pas oublier qu'une partie du revenu peut être épargnée et qu'il serait faux de recalculer cette épargne en dollars constants à partir d'un indice qui se rapporte à des habitudes de consommation.

De même, il faut se rappeler que l'évaluation des variations des gains effectifs calculées à partir de moyennes effectives peut différer de l'évaluation des variations du pouvoir d'achat du revenu disponible en raison de facteurs tels que l'évolution de l'impôt sur le revenu des particuliers et des retenues destinées à l'assurance sociale, aux régimes de pensions, etc. Ainsi, l'indice de la rémunération effective ne sert pas à mesurer les variations des niveaux de consommation des salariés ou de leurs familles, mais plutôt à montrer les tendances du pouvoir d'achat des salariés par rapport aux articles contenus dans l'indice; enfin, l'indice ne prend pas en compte les autres revenus des familles (tels que les allocations familiales) ou les variations de l'épargne des familles.

La période de référence du tableau qui présente les salaires tant réels (en dollars courants) qu'effectifs (en dollars constants) prend pour base l'année 1961. En fait, on peut choisir n'importe quelle période de référence comme base, puisque les taux de variation entre deux périodes seront les mêmes quelle que soit la période de référence choisie.

On peut obtenir plus de renseignements sur le tableau 13 en s'adressant à la Division du travail, Statistique Canada.

Comparaisons entre les prix de détail d'une ville à l'autre

À l'origine, la statistique des différences entre les prix de détail d'une ville du Canada à l'autre a été mise au point pour l'alimentation; par la suite, on l'a étendue à d'autres postes du budget familial tels que l'habillement, les transports, l'entretien du ménage, la santé et les soins personnels, les loisirs, la formation et la lecture, et le tabac et l'alcool. Au total, les comparaisons d'une ville à l'autre portent sur des biens et des services constituant près des trois quarts du budget servant actuellement à construire l'indice des prix à la consommation au Canada, la seule grande omission étant le logement (location et frais de possession). Sans vouloir nier l'importance des différences en ce qui concerne le logement dans toute comparaison globale du niveau général des prix auxquels les consommateurs doivent faire face dans divers centres urbains, il faut bien dire que les problèmes que comporteraient l'établissement d'une comparaison valable d'une ville à l'autre sont tels qu'ils nécessitent plus de recherche. Entre-temps, on estime que malgré l'absence actuelle de données sur les dépenses de logement, la publication de comparaisons des prix de détail pour d'autres postes du budget permettra de faire de gros progrès en ce qui concerne la satisfaction des besoins variés des utilisateurs.

On trouvera au Tableau 14 le résultat d'une mise à jour de mesures de prix de détail tirées précédemment jusqu'à mai 1971, ainsi que des données plus complètes sur plusieurs villes. Une explication plus détaillée de l'étude dont le tableau en question est tiré figure dans les livraisons de novembre 1968, novembre 1969, et avril 1972 de *Prix et indices des prix* (no 62-002 au catalogue).

The original data base of this study was the wide range of retail price quotations collected in the course of production of the national and urban Consumer Price Indexes. In developing these spatial price comparisons, efforts were made to achieve comparability by equating qualities of goods and services and by matching types of retail outlets, as far as possible. Price relationships between pairs of cities were derived and subsequently converted to a common base of Winnipeg prices equalling 100 to facilitate comparisons over the whole range of cities. Except for foodstuffs and new passenger cars for which inter-city price differentials were derived directly from new comparisons based on May 1971 price data, the updating of these measurements of inter-city retail price differentials was accomplished by application of the relative movement of prices, at the item level in each city, over the intervening periods as derived from the relevant city consumer price indexes. These price relationships at the item level were aggregated on the basis of the Canada urban consumer spending pattern, rather than the patterns applicable to individual cities. While differences in spending patterns exist among cities, the magnitude of these differences in the cities covered is not such as to affect most of the spatial comparisons significantly. Because of the previously mentioned absence of shelter price relationships, which may be of considerable significance in any overall comparison of inter-urban retail price differentials, aggregative indexes beyond major budget groupings are not shown.

The weighting factors used to combine items to group and component levels in Table 14 are based on 1957 expenditures, and therefore will not be identical to the 1967 weights, introduced in May 1973, in Consumer Price Index tables.

It should be noted that the retail prices used in this comparison, being those faced by consumers, include sales and excise taxes as applicable. Variations between provinces in the scale of sales taxes imposed on a wide range of non-food commodities can be of significance in explaining inter-city price differentials for these items.

While these indexes have been expressed in terms of Winnipeg = 100, the selection of Winnipeg as the base city has no special significance, and the indexes may be expressed on the base of any of the individual cities included.

Farm Input Price Indexes (1961 = 100)

Farm Input Price Indexes measure, through time, changes in prices of commodities and services used in Canadian farming operations. The item content and weights are based on data from the 1958 Farm Income and Expenditure Survey, the most recent source of sufficiently detailed data. These data have been modified to reflect 1961 prices and conditions. Farm Input Price Indexes are calculated quarterly for Eastern, Western and all Canada on a 1961 = 100 time base.

Les premières données de base pour la présente étude ont été constituées par l'importante collection de prix de détail recueillie lors de la confection des indices nationaux et urbains de prix à la consommation. Au moment d'établir ces comparaisons géographiques de prix, on s'est efforcé d'assurer la comparabilité en prenant des biens et des services de qualité égale et en assortissant autant que possible les points de vente au détail par type. Les relations de prix entre paires de villes ont été calculées puis converties à la base commune des prix de Winnipeg = 100 afin de faciliter des comparaisons pour l'ensemble de toutes les villes. Sauf pour les denrées alimentaires et les voitures neuves pour lesquelles les différences de prix entre villes ont été tirées directement de nouvelles comparaisons fondées sur les données de mai 1971, la mise à jour de ces mesures des différences de prix de détail entre les villes a été assurée grâce à l'extension des mouvements relatifs de prix au niveau de chaque article dans chaque ville aux périodes observées selon le calcul établi à partir de l'indice de prix à la consommation pour la ville en question. Ces relations entre les prix au niveau de l'article ont été agrégées sur la base de habitudes de consommation du citoyen pour l'ensemble du Canada et non pas selon les habitudes de dépense applicables à des villes individuelles. Même s'il existe des différences dans les habitudes de dépense d'une ville à l'autre, l'importance de ces différences en ce qui concerne les villes dont il est question ici ne sont pas suffisantes pour influencer sensiblement sur la plupart des comparaisons géographiques. Du fait de l'absence des relations de prix en ce qui concerne le logement, dont il a déjà été question ci-dessus et qui pourrait avoir une importance considérable chaque fois que l'on voudrait tirer une comparaison globale entre les différences de prix à la consommation au détail d'une ville. L'autre, on ne trouvera ici aucun indice synthétique agrégé au-delà des principales composantes du budget.

Les facteurs de pondérations utilisés pour regrouper les articles en groupes et en éléments dans le Tableau 14 sont basés sur les dépenses de 1957; ils ne sont donc pas identiques aux pondérations de 1967 adoptées en mai 1973 dans les tableaux relatifs à l'indice des prix à la consommation.

Il faut remarquer que les prix de détail ayant servi à la présente comparaison sont ceux que doit payer le consommateur et comprennent donc les taxes de vente et les taxes d'accises qui peuvent s'appliquer. Les différences d'une province à l'autre entre les barèmes de taxe de vente imposés sur une grande variété de biens non alimentaires peut avoir une grande importance pour expliquer les différences de prix d'une ville à l'autre pour les articles en question.

Le fait que ces indices aient été exprimés en prenant Winnipeg = 100 ne signifie pas que le choix de Winnipeg comme ville de référence ait une signification particulière et les indices pourraient être exprimés sur la base de n'importe laquelle des villes qui y figurent.

Indices de prix des entrées dans l'agriculture (1961 = 100)

Les indices de prix des entrées dans l'agriculture mesurent l'évolution dans le temps du prix des produits et des services utilisés dans l'exploitation agricole au Canada. Les articles qui sont compris, ainsi que leurs poids, sont fondés sur l'enquête de 1958 sur les revenus et les dépenses des agriculteurs, qui constitue la source la plus récente dont les données soient suffisamment détaillées. Ces données ont été adaptées de manière à rendre compte des prix et des conditions constatées pour 1961. Les indices des prix des entrées dans l'agriculture sont calculés chaque trimestre pour l'Est, l'Ouest et l'ensemble du Canada sur la base 1961 = 100.

Farm Input Price Indexes replace one of the two major component indexes of the previously published series, Price Index Numbers of Commodities and Services Used by Farmers, 1935-39 = 100. The latter index was composed of a Farm Family Living Index and a Composite Index Exclusive of Living Component. The Farm Input Price Indexes replaces the Composite Index Exclusive of Living Component from 1961 forward.

A detailed description of concepts, methods and data sources is contained in the occasional paper, *Farm Input Price Indexes, 1961 = 100*, Catalogue No. 62-534, and is reproduced in the September 1971 issue of *Prices and Price Indexes*, Catalogue No. 62-002. The foregoing publications also contain total and component price indexes for Eastern, Western, and all Canada, from 1961 to and including the third quarter 1971.

Current price indexes will be published on a regular basis in the quarterly publication, *Farm Input Price Indexes, 1961 = 100*, Catalogue No. 62-004, and in the monthly publication *Prices and Price Indexes*, Catalogue No. 62-002.

The Farm Family Living component of the 1935-39 series has not been replaced by an updated counterpart, and publication has been suspended.

Security Price Indexes

Security price indexes measure through time the effect of price change on the value of a portfolio of stocks bought and held by a hypothetical investor (as opposed to the more speculative trader). The portfolio represents stocks of Canadian companies listed on Toronto and Montreal stock exchanges.

The number of shares held for each issue is in proportion to the total number of shares outstanding. Prices in the investor's mining and supplementary stock indexes are Thursday's closing quotations from the exchange (Montreal, Toronto, Vancouver or Calgary) with the highest volume for a particular stock, as reported in the Daily Canadian Data Bank of the Financial Post Computer Services Department. For preferred stocks, prices are monthly weighted averages of the daily closing price in which weights are daily total volume. The price reference base for the indexes is the year 1956, and the indexes express prices as a percentage of price in 1956, arithmetically converted to the 1961 = 100 base.

Revised indexes on the base 1956 = 100 were first presented in the June 1962 issue of this publication. The most important change in the revision of the indexes, apart from the shift in the price reference base, was the classification of stocks according to the Standard Industrial Classification. In the continuing major group Industrials, 4 sub-groups (Mining and Grains, Food and Allied Products, Machinery and Equipment, and Building Materials) were replaced by 8 new sub-groups (Foods, Printing and Publishing, Primary Metals, Metal Fabricating, Non-metallic Minerals, Chemicals, Construction and Retail Trade). The remaining 5 sub-groups of the former index, viz., Industrial Mines, Beverages, Textile and Clothing, Pulp and Paper, and Oils (renamed Petro-

Les indices des prix des entrées dans l'agriculture remplacent l'un des deux principaux éléments d'indices de la série précédente sur l'indice de prix des produits et services utilisés par les agriculteurs, (1935-39 = 100). Cet indice comprenait l'indice du coût de la vie pour les familles agricoles et l'indice synthétique sans le coût de la vie. Les indices des prix des entrées dans l'agriculture remplacent l'indice synthétique sans le coût de la vie à partir de 1961.

Le bulletin hors série *Farm Input Price Indexes, 1961 = 100* (no 62-534 au catalogue) contient une description détaillée des concepts, des méthodes et des sources de données qui est reprise dans *Prices and Price Indexes* de septembre 1971 (no 62-002 au catalogue). Ces deux bulletins contiennent également les indices des prix totaux et partiels pour l'Est et l'Ouest du Canada et pour l'ensemble du Canada, de 1961 au troisième trimestre de 1971 inclusivement.

Les indices des prix en cours seront publiés régulièrement dans le bulletin trimestriel *Farm Input Price Indexes, 1961 = 100* (no 62-004) et dans le bulletin annuel *Prices and Price Indexes* (no 62-002).

On n'a pas remplacé l'indice du coût de la vie pour la famille agricole des séries de 1935-39 par un équivalent à jour et on a cessé de la publier.

Indices des cours des valeurs mobilières

Les indices des cours des valeurs mobilières mesurent dans le temps l'incidence du mouvement des prix sur la valeur d'un portefeuille de titres achetés et détenus par un actionnaire hypothétique (par opposition au spéculateur). Le portefeuille comprend des actions de sociétés canadiennes cotées à la Bourse de Toronto et de Montréal.

Le nombre d'actions détenues pour chaque émission est proportionnel au nombre total d'actions en circulation. Les indices des prix des titres miniers et les indices supplémentaires sont les cours de fermeture de jeudi (Montréal, Toronto, Vancouver et Calgary) affichant le volume le plus élevé pour une valeur en particulier, d'après la Banque des données canadiennes quotidiennes du Service de l'informatique du *Financial Post*. Pour les actions privilégiées, les prix sont les moyennes pondérées mensuelles des cours de clôture de chaque jour et les poids, le volume quotidien total. La période de référence pour les indices est l'année 1956 et les indices représentent les prix exprimés en pourcentage des prix de 1956 recalculé sur la base 1961 = 100.

Les indices révisés sur la base 1956 = 100 ont été publiés pour la première fois dans la livraison de juin 1962 de cette publication. La modification la plus importante à la révision de l'indice, à part le changement de la période de référence, a été le classement des actions d'après la Classification des activités économiques. Dans le cas du grand groupe des valeurs industrielles, 4 sous-groupes (minoterie et céréales, aliments et produits connexes, machines et matériel et matériaux de construction) ont été remplacés par 8 nouveaux sous-groupes (aliments, imprimerie et édition, métaux primaires, produits métalliques, minéraux non métalliques, produits chimiques, construction et commerce de détail). On a conservé les 5 autres sous-groupes de l'ancien indice: mines industrielles, boissons, textiles et habillement, pâte et

leum) were continued. The major group utilities was continued but the Pipelines index was added as a sub-group and the previous Power and Traction sub-group was replaced by two new sub-groups, viz., Electric Power and Gas Distribution. A major group Finance was composed of the former major group Banks and the former supplementary index Investment and Loan. Constant weights which were previously limited to major groups, were extended to sub-groups. Weights in the index continue to be based on shares outstanding.

A revision of the Security Price Indexes to the 1971 = 100 base is under development.

For the list of stocks currently included in the Investors Index and Preferred Index, see *Prices and Price Indexes* for March 1974.

Residential and Non-Residential Building Construction Price Indexes

The fixed-weighted input price indexes of materials and wage rates for residential and non-residential building construction are being published here for the convenience of users (Table 20). A more complete description of the characteristics of the indexes appeared in the May 1970 issue of *Prices and Price Indexes*, and this explanation is available on request from the Prices Division, as is historical monthly data for the series.

Because the indexes measure the impact of price change on the materials and labour inputs to construction, and not the effects of changes in profit margins or productivity, there is thought to be an upward bias in these indexes as indicators of price change for the output of building construction, or buildings in place. Users are therefore warned to exercise caution in making use of the series, for this purpose. A comparison of these series with the implicit price deflators⁽¹⁾ providing an estimate of price change for the output of the industry, derived from the measurement of gross fixed capital formation in constant dollars, will provide some insight into the effects on the price movement of adjusting the fixed-weighted input indexes for changes in productivity and profit margins.

During the period from 1926-1966 a special sample or respondents supplied materials prices for the index. As of 1961 this sample has been replaced with prices from the ISPI system⁽²⁾. The latter are published monthly in Table 2 of this publication.

The Construction wage rate series is based on wage rate material supplied by the Labour Standards Branch, Dept. of Labour, and relates to minimum wages paid on government contracts for construction in a variety of trades and cities.

papers, et huiles (sous la désignation de pétrole). Le grand groupe de services d'utilité publique a été conservé mais l'indice de pipelines a été ajouté comme sous-groupe et l'ancien sous-groupe d'énergie et traction a été remplacé par deux nouveaux sous-groupes: l'énergie électrique et la distribution du gaz. Le nouveau grand groupe "Finances" est composé de l'ancien grand groupe banques et de l'ancien indice supplémentaire investissements prêts. Les facteurs constants de pondération qui étaient autrefois limités aux grands groupes s'appliquent maintenant aux sous-groupes. Les facteurs de pondération de l'indice continuent à être basés sur les actions en circulation.

On prépare actuellement une révision des Indices des valeurs mobilières sur la base 1971 = 100.

La liste des titres repris actuellement dans les indices de valeurs de placements et dans les indices des valeurs privilégiées se trouve dans *Prix et indices des prix* de Mars 1974.

Indices des prix de la construction résidentielle et non résidentielle

Les indices à pondération fixe des prix des entrées matériaux et de salaires dans la construction résidentielle et non résidentielle sont publiés ici pour faciliter la tâche aux utilisateurs (Tableau 20). On trouvera une description plus détaillée des caractéristiques des indices dans *Prices and Price Indexes* de mai 1970. On peut s'en procurer un exemplaire ainsi que les données mensuelles chronologiques sur cette série en s'adressant à la Division des prix.

Comme les indices mesurent l'influence des variations de prix sur les entrées de matériaux et de main-d'oeuvre du bâtiment, plutôt que les répercussions des variations de marges bénéficiaires ou de productivité, on les croit surestimés en tant qu'indicateurs des variations de prix de la construction, ou des bâtiments construits. Les utilisateurs devront donc faire preuve de discernement quand ils se serviront des séries à cette fin. Si l'on compare ces séries avec les facteurs de dégonflement⁽¹⁾ des prix implicites (qui donnent une estimation de la variation du prix pour la production de l'industrie), obtenus en mesurant la formation brute de capital fixe en dollars constants, on aura un aperçu des effets de l'ajustement sur l'évolution des prix des indices à pondération fixe des entrées pour tenir compte des variations de productivité et des marges bénéficiaires.

Au cours de la période 1926-1966, un échantillon spécial d'enquêtés a donné les prix pour l'indice. En 1961, on a remplacé cet échantillon par les prix tirés du système I.P.V.I.⁽²⁾. Ces prix sont publiés par mois dans le Tableau 2 du présent bulletin.

La série consacrée au taux de rémunération dans l'industrie du bâtiment est basée sur les chiffres fournis par la Direction des normes du travail du ministère du Travail; elle a trait au salaire minimum versé aux termes de marchés signés avec le gouvernement pour des travaux de construction dans divers corps de métiers et dans diverses villes.

(1) Gross National Product Division, Statistics Canada.

(2) *Industry Selling Price Indexes 1956-1968* Cat. 62-528.

(1) Division du produit national brut, Statistique Canada.

(2) *Indices des prix de vente dans l'industrie, 1956-1968*, Cat. 62-528 au catalogue.

Users are reminded that the indexes were arithmetically rebased to the year 1961 = 100 and therefore combining the components with the weights as shown will not provide the composite index provided. Users able to provide their own weights for the components can recombine the components to suit their particular needs.

Basic Union Wage Rate Indexes for Major Construction Trades

Basic union wage rate indexes are prepared for 12 major construction trades in each of 14 cities in Canada. Weighted average city indexes are prepared as well as a 14 city composite. Indexes are released quarterly in summary form in Tables 21 and 22 of Prices and Price Indexes (62-002). This index is found in Table 20 of Prices and Price Indexes (62-002). Full trade detail, by city, is published quarterly in the Construction Price Statistics Service Bulletin, (62-006).

Rates utilized in index calculations are derived mainly from the *Construction Collective Agreement Survey Service* provided by the Canadian Construction Association. These rates are supplemented as necessary by surveys of some union locals. While indexes containing supplementary benefits will be available soon, presently published indexes relate to basic union wage rates only. The rates indicate the rate of straight time compensation for one hour in the city specified. Rates converted into the form of ratios were combined into weighted average city indexes utilizing 1961 Census of population data on numbers of people employed by trade and average earnings in the construction industry.

The base-weighted indexes provide an estimate of the impact of rate change on basic union wages for the major construction trades employed in a given city. Because union workers in cities tend to be engaged mainly in non-residential or commercial building construction and because rates for trades associated with engineering work were excluded from the price sample the indexes best approximate wage rate change for non-residential construction.

Highway Construction Price Indexes (1961 = 100) (3)

The Price Indexes of Highway Construction in Canada express prices paid by provincial governments in contracts awarded for highway construction each year, as a percentage of prices paid in 1961. The arithmetic conversion of the indexes to a 1961 time base does not change their percentage movements as compared to the previously published indexes to a 1956 = 100 time base. Users are warned that an aggregation of the converted major group indexes with the published weights will not yield the published 1961 = 100 all items indexes. The conversion does not create this problem for a user wishing to reweight the converted major group indexes using weights appropriate to this own purpose.

(3) The years refer to fiscal years. Thus 1968 refers to the period April 1, 1968 to March 31, 1969.

Nous rappelons aux utilisateurs que les indices ont été recalculés sur la base 1961 = 100 et qu'ils n'obtiendront pas l'indice synthétique fourni en combinant les éléments et les pondérations donnés. Les utilisateurs qui sont à même de fournir leur propre pondération pour les éléments peuvent procéder à leur propre combinaison adaptée à leurs besoins spécifiques.

Indices du salaire syndical de base dans les principaux corps de métiers

Les indices du salaire syndical de base portent sur les 12 principaux métiers de la construction dans 14 grandes villes canadiennes. On calcule les indices pondérés moyens pour chaque ville de même que l'indice synthétique des 14 villes. Les indices sont publiés chaque trimestre dans les Tableaux 21 et 22 de la publication *Prix et indices des prix* (numéro de catalogue 62-002). On peut trouver cet indice dans le Tableau 20 de la publication *Prix et indices des prix* (no 62-002). Des données détaillées sur tous les métiers de la construction dans chaque ville sont publiés chaque trimestre dans le bulletin de service *Statistique des prix dans la construction* (numéro de catalogue 62-006).

Les taux utilisés dans le calcul des indices proviennent principalement de la publication *Construction Collective Agreement Survey Service* de l'Association canadienne de la construction. Des enquêtes auprès de certaines succursales de syndicats ont été menées lorsqu'il fallait disposer de taux supplémentaires. On publiera sous peu des indices contenant les avantages supplémentaires, mais les indices actuels portent uniquement sur le salaire syndical de base. Les taux correspondent à la rémunération normale pour une heure dans la ville en question. Les taux convertis en ratios ont été transformés en indices pondérés moyens des villes à partir des données tirées du recensement de la population de 1961 sur les effectifs de chaque métier et les gains moyens dans l'industrie de la construction.

Les indices pondérés permettent d'évaluer l'influence de la variation du taux des salaires syndicaux pour les principaux métiers de la construction dans une ville donnée. Étant donné que les travailleurs syndiqués dans les villes s'occupent surtout de la construction non résidentielle, ou commerciale, et que les taux des métiers relevant du génie civil n'ont pas été inclus dans l'échantillon des prix, les indices constituent la meilleure approximation des variations dans les taux de salaire dans la construction non résidentielle.

Indices des prix de la construction routière (1961 = 100) (3)

Les indices des prix de la construction routière au Canada représentent les prix payés chaque année par les administrations provinciales au titre des marchés de construction routière, en pourcentages des sommes payées en 1961. La conversion des indices à la base 1961 = 100 ne modifie pas leur évolution en pourcentages comparativement aux indices publiés précédemment et dont la base était 1956 = 100. Les utilisateurs ne doivent pas s'attendre à ce que le groupement des indices convertis des grands groupes et des pondérations publiées donne l'indice général publié (1961 = 100). Cette conversion ne pose aucun problème à l'utilisateur qui désire réviser la pondération des indices convertis des grands groupes en utilisant les poids adaptés à ses fins propres.

(3) Il s'agit d'exercices financiers. 1968 représente donc la période de 1er avril 1968 au 31 mars 1969.

Base-weighted indexes are published annually and measure, for the period 1956 to 1968, the effect of price change on the cost of specific programmes of highway construction in Canada represented by highway construction contracts of approximately \$50,000 or more awarded by specified provincial governments during the weight-base period. Weights of items in the index, representing the relative importance of units of construction in the year 1956 are held constant. Only the estimates of prices change from year to year, and the indexes thus measure the movement of prices through time. For a more complete statement of the problem of estimating price change for highway construction see pages vi & vii of the December 1967 issue of *Prices and Price Indexes*, Catalogue 62-002 and pages 9 & 10 of the reference paper *Price Indexes of Highway Construction* in Catalogue 62-520. The all-items index or its components are useful for planning and budgeting for highway construction programmes, in escalating or updating previously costed roadwork, in estimating replacement cost of previously completed roadwork, and as historical measurements of price trends in highway construction.

The indexes do not necessarily reflect the price movements of non-contract construction or maintenance work. The indexes are designed to measure price changes for a fixed programme of highway construction, in each of the seven provinces. Because price levels in the time base-period (1961) varied from province to province the indexes cannot be used to compare price differences between provinces, but only to compare differences in the rate at which prices are changing in the provinces.

Prices contained in the index are not for units of labour and materials as is usually the case in construction price indexes but rather for units of construction work put in place such as an acre of clearing, a cubic yard of earth excavation or a ton of bituminous hot-mix paving. In addition, the index contains prices of some materials, such as culvert pipe, usually supplied to the contractor by the highway departments. Prices of highway construction work are annual weighted averages of bid prices of units of construction in groups of contracts awarded, classified by price-determining characteristics of the contracts and the bid items such as volume of the bid item, type of contract and geographic location. Prices of material items of supply are prices paid by government departments to suppliers.

Price Indexes of Electric Utility Construction

In electric utility terms, the index is designed to provide an estimate of the impact of price change on the cost of materials, labour and equipment used in constructing and equipping electric utilities in a specified base period. The index provides an estimate of how much more, or less it would cost to reproduce the base-period programme of construction in another period, using the same construction technology as in the base period and assuming rates of profit and productivity in construction are the same in both periods.

Les indices pondérés en fonction de la base sont publiés chaque année; ils mesurent, pour la période allant de 1956 à 1968, l'influence de l'évolution des prix sur le coût des programmes spécifiques de construction de routes au Canada représentés par les marchés de construction de routes d'environ \$50,000 ou plus accordés par certaines administrations provinciales au cours de la période visée par la base de pondération. Les poids des éléments des indices qui représentent l'importance relative des unités de construction en 1956 sont constants. Seules les estimations de prix varient d'une année à l'autre; les indices mesurent donc l'évolution des prix dans le temps. Pour plus de détails sur l'estimation de l'évolution des prix pour la construction routière, se reporter aux pages vi et vii du numéro de décembre de *Prices and Price Indexes* (Numéro 62-002 au catalogue de Statistique Canada) et aux pages 9 et 10 du bulletin intitulé *Price Indexes of Highway Construction in Canada* (no 62-520 au catalogue de Statistique Canada). L'indice général ou ses éléments servent à la planification et à la budgétisation des programmes de construction routière à indexer ou à mettre à jour les prix de travaux de routes effectués précédemment, à estimer le coût de remplacement des travaux routiers achevés précédemment et à mesurer chronologiquement l'évolution des prix de la construction routière.

Les indices ne reflètent pas nécessairement l'évolution des prix de la construction effectués hors marché ou des travaux d'entretien; ils servent à mesurer les variations de prix pour un programme déterminé de construction routière dans chacune des sept provinces. Au cours de la période qui a servi de base (1961) les niveaux de prix ont varié d'une province à l'autre; aussi, on ne peut utiliser les indices pour comparer des différences de prix entre les provinces mais on peut seulement les employer pour comparer les différences entre taux de variation des prix dans les provinces.

Les prix compris dans l'indice ne se rapportent pas aux unités de travail ni de matériaux comme c'est habituellement le cas dans l'indice des prix de la construction; ils se rapportent plutôt aux unités de travail de construction effectué, comme le défrichage d'une acre de terrain, l'excavation d'une verge cubique ou l'épandage à chaud d'une tonne de béton bitumineux. En outre, l'indice comprend le prix de certains matériaux, par exemple, les tuyaux de ponceau fournis habituellement à l'entrepreneur par les ministères de la Voirie. Les prix des travaux de construction routière sont des moyennes pondérées des prix de soumission pour les unités de construction par groupe de marchés classés selon les caractéristiques des marchés qui déterminent le prix et les éléments d'offre tels que le volume de chaque poste, le type de marché et la situation géographique. Les prix de matériaux fournis sont les prix payés par le ministère aux fournisseurs.

Indices des prix à la construction dans les services d'électricité

En ce qui concerne les services d'électricité, l'indice a pour but de fournir une estimation des conséquences des variations de prix sur le coût des matériaux, de la main-d'œuvre et du matériel utilisés dans la construction et l'équipement des services d'électricité au cours d'une période de référence donnée. L'indice sert à mesurer combien il faudrait payer en plus ou en moins pour réaliser un programme de construction identique à celui de la période de référence en utilisant les mêmes techniques de construction et en supposant que les taux de rentabilité et de productivité de la construction soient les mêmes pour les deux périodes.

As the market does not yield comparable selling prices for such unique transactions as, for example, the sale of a transmission line, it was not possible to produce an index of the prices of completed structures. Completed structure indexes would be appropriate for users wishing either to estimate reproduction costs or to deflate capital formation. For such uses the indexes introduced in this publication have specific short-comings. Nonetheless, they may be helpful for such purposes provided the users understand the deficiencies. Thus the reader is asked to make particular note of Section III, of Occasional Paper Catalogue 62-526 Price Indexes of Electrical Utility Construction - The Necessity for Compromise and Section XI, (of the same paper) Uses and Limitations. In addition, because particular construction projects are unique, the aggregate indexes will not likely be appropriate to specific projects since they relate to an average mix of materials, labour and equipment derived from a variety of projects in a specific base period. Thus, if the component price indexes and their weights included in the aggregate index presented herein are inappropriate for a particular purpose the user should consider selecting appropriate component indexes from among those published herein. These indexes could then be combined into an aggregate index by utilizing weights derived from the projects or assets to be costed or deflated.

Prices used in the indexes are for the most part selling prices reported monthly by manufacturers for materials or equipment. The price reported is for units and terms of sale representative of the volume sales of the manufacturer. Where sales to electric utilities form a small share of the total sales of the manufacturer, the price reported may not adequately represent the price to the construction trade and others directly involved in constructing and equipping electric utility facilities. In such cases, prices charged other manufacturers or wholesalers have been included in the index. Federal sales tax changes are reflected in the index but no adjustments have been made for provincial tax changes. Until December 1964 wage rate data were supplied by the Federal Department of Labour and represented minimum hourly rates paid to construction workers in major cities employed on federal government contracts. In 1965 union basic wage rates reported by major utilities and some contractors were incorporated into the index. The sample selected provides an estimate of wage rate change for urban own account and contract electric utility construction. Some further improvements will be made to improve the coverage relating to rural non-union work for transmission lines.

Construction has been defined as new construction or major reconstruction for distribution systems, transmission lines and transformation or switching stations. Maintenance and operating costs are excluded. Cost data were supplied by major utilities, relating to own account and to contract construction erected during the last half of the 1950's. Weights were derived from these data which indicated the relative importance of the major inputs to the construction. The components of cost relating to distribution and transmission facilities encompass such items as poles, hardware, conductors, insulators, meters, distribution transformers and expenditures for labour, e.g. - linemen and groundmen. Costs

Comme il est impossible d'obtenir directement sur le marché des prix de vente comparables pour des opérations de caractère aussi unique, par exemple, que la vente d'une ligne de transport d'énergie, Statistique Canada n'a pu établir un indice du prix des installations en place. Un tel indice ne serait utile que si l'on désirait obtenir une estimation des sommes qu'il faudrait engager pour réaliser à nouveau un programme de construction identique ou encore pour dégonfler une formation de capital. Les indices publiés ici présentent en ce sens certaines lacunes. Ils peuvent néanmoins servir à de telles fins pourvu que les utilisateurs en comprennent les limites. Les lecteurs peuvent se rapporter aux Sections III et XI de la publication *Price Indexes of Electrical Utility Construction* (Statistique Canada, 62 = 526): "*The Necessity for Compromise*" et "*Uses and Limitations*". De plus, en raison du caractère unique de chaque projet de construction, l'indice synthétique ne pourra sans doute pas s'appliquer à un projet bien précis car il porte justement sur une moyenne des matériaux, de la main-d'oeuvre et du matériel utilisés dans la réalisation de plusieurs projets au cours d'une période de référence donnée. Ainsi, si les indices détaillés et les poids correspondants qui composent les indices synthétiques présentés ici ne conviennent pas à un usage bien précis, l'utilisateur pourra toujours se servir des autres indices détaillés et construire, à l'aide des coefficients de pondération, les indices de son choix, soit pour évaluer le coût d'un projet, soit pour établir des facteurs de dégonflement.

La plupart des prix des matériaux et du matériel utilisés pour établir les indices sont les prix de vente déclarés mensuellement par les fabricants. Ces prix sont représentatifs des unités de mesure et des conditions de vente valables pour les ventes en grande quantité de fabricants. Lorsque les ventes aux services électriques ne représentent qu'un faible pourcentage du chiffre d'affaire d'un fabricant, il est possible que le prix déclaré ne représente pas de façon satisfaisante le prix consenti aux entreprises en construction et aux autres industries s'occupant directement de construction et d'installation de services d'électricité. Dans ces cas, on a inclus dans l'indice les prix facturés aux autres fabricants ou grossistes. On a tenu compte, dans l'établissement de l'indice, des variations de la taxe de vente fédérale; toutefois, il n'a été fait aucun redressement pour les variations de taxe provinciale. Jusqu'en décembre 1964, les données sur les taux de rémunération étaient fournies par le ministère fédéral du Travail et représentaient le salaire horaire minimum versé aux personnes travaillant au titre d'un marché accordé par le gouvernement fédéral dans certaines grandes villes. En 1965, on fit entrer dans l'indice le salaire de base exigé par les syndicats et déclaré par les principaux services et par certains entrepreneurs. L'échantillon choisi représente donc une estimation des variations du taux de rémunération dans la construction en ville de services électriques pour compte propre ou au titre d'un marché. Certaines améliorations à l'indice sont prévues de façons à l'étendre aux personnes non syndiquées travaillant dans les régions rurales à la construction de lignes de transport d'énergie.

Le terme "construction" a été défini comme étant la construction neuve ou la réparation des réseaux de distribution, de lignes de transport d'énergie, de postes de transformation ou de postes de manœuvre. L'entretien et les frais d'exploitation ne sont pas compris. Les données sur les prix de revient sont fournies par les principaux services d'électricité et portent sur la construction exécutée pour compte propre ou au titre d'un marché au cours de la deuxième moitié des années cinquante. Les poids tirés de ces données représentent l'importance relative des principaux éléments entrant dans la construction. Les composantes du coût de la distribution et du transport comprennent certains éléments comme les poteaux, la quincaillerie, les conducteurs, les isolateurs, les

relating to construction equipment such as trucks, and components of equipment operating costs such as tires, gasoline and repairs were also included. Transformation and switching stations encompass some of the items listed above but the most important elements of cost relate to transformers and switching equipment. Expenditures for land and rights-of-way have been excluded.

The term Canadian electric utility has been defined to include municipal as well as nonmunicipal utilities but the majority of the cost data tabulated was derived from the major nonmunicipal utilities. Manufacturers who produce electricity for their own use and who may also sell electricity have been excluded from the cost survey.

Price Indexes of Hydro-electric Generating Stations

The following additional points may be of assistance to users of the hydro-electric generating stations index which was described in some detail in Statistics Canada Occasional Paper, Catalogue 62-533.

- (a) Wage rate data are derived from a variety of sources but mainly from the Canadian Construction Association surveys of union agreements and from Federal Pay Research Bureau studies of salaries paid professional, technical and clerical personnel. Basic wage rates, excluding fringe benefits, were used in index calculations.
- (b) Prices for ready-mix concrete and for earth and gravels in place have been utilized as replacements for input prices of labour, materials and equipment rental for concrete production and embankments in place.
- (c) Prices are included for some categories of expense not previously included in input price indexes for construction: interest during construction, overhead expense and the provision and operation of temporary camp accommodation.
- (d) Weighting patterns exclude expenditure for ancillary facilities for logging and navigation permanent houses, etc.

Price Indexes of Machinery and Equipment

In response to the need of users wishing either to correct expenditure data of machinery and equipment for price change or to make comparison of commodity movement, a system of machinery and equipment indexes has been under development for a number of years. This is a system of industry indexes relating to types of equipment purchases made by establishments belonging to industries as defined by the 1960 Standard Industrial Classification.

compteurs, les transformateurs de distribution et les dépenses en main-d'oeuvre (monteurs, personnel de service, etc.). Les dépenses entraînées par le matériel de construction (camions et pièces d'équipement) et les frais d'exploitation (pneus, essence et réparations) sont également inclus. Les postes de transformation et les postes de transformation et les postes de manoeuvre comprennent certains des éléments ci-dessus; les frais les plus importants sont cependant entraînés par les transformateurs et les appareils de connexion. Les dépenses foncières et les droits de passage ont été exclus.

Par définition, l'expression "service d'électricité canadien" englobe aussi bien les services municipaux que les autres; toutefois, la majeure partie des données de coût ont été tirées des déclarations des services non municipaux. Les fabricants qui produisent de l'électricité destinée à l'auto-consommation et qui peuvent également vendre de l'électricité ont été exclus de cette enquête.

Indices de prix des centrales hydroélectriques

Les points supplémentaires ci-après peuvent aider les utilisateurs de l'indice de centrales hydroélectriques décrit en détail dans le bulletin hors-série de Statistique Canada portant le numéro 62-533.

- a) Les données sur le taux de rémunération proviennent de diverses sources et surtout des enquêtes sur les accords syndicaux de l'Association canadienne de la construction et des études du Bureau de recherche sur les traitements portant sur la rémunération des travailleurs intellectuels, des techniciens et du personnel administratif. Pour le calcul de l'indice, on a utilisé les taux de rémunération de base, avantages sociaux non compris.
- b) Au lieu du prix des entrées de main-d'oeuvre, de matériaux et de location de matériel pour la production de béton et des remblais effectués, on a utilisé le prix du béton préparé et celui de la terre et du gravier en place.
- c) L'indice comprend les prix correspondant à certains postes de dépenses qui n'étaient pas repris auparavant dans les indices de prix des entrées dans la construction: intérêts pendant la construction, frais généraux, fourniture et entretien de barraquements temporaires.
- d) Les facteurs de pondération ne comprennent pas les dépenses affectées aux installations auxiliaires pour l'exploitation forestière et la navigation, les maisons permanentes, etc.

Indices des prix des machines et du matériel

Afin de répondre au besoin des utilisateurs qui désirent réviser les données sur les dépenses en machines et en matériel en fonction des changements de prix ou établir une comparaison du mouvement des marchandises, on prépare depuis un certain nombre d'années un système d'indices des prix des machines et du matériel. Il s'agit d'un système d'indices par industrie ayant trait aux genres d'achats de matériel des établissements qui font partie des industries définies dans la Classification type des industries de 1960.

The base-weighted indexes give an estimate of how much more, or less, it would cost today to purchase a group of machines specified for a particular base period.

The interim time base for the indexes is 1968=100 and most of the data from which weighting patterns were derived came from 1968 or nearby years. Such data were usually supplied by major purchasers.

Conceptually purchasers' prices should be utilized in such indexes but because of a number of practical problems, manufacturers' selling prices were usually used. Such prices were then corrected as relevant for duty, exchange and federal sales tax.

Foreign prices utilized in the index are either U.S. Bureau of Labour Statistics commodity indexes or Prices Division collections from manufacturers most of whom reside in the United States.

The first industry index was released mid-1971 and related to purchases by the construction industry. Indexes for other industries will be released from time to time as they become available. In the interim preliminary indexes for a number of other industries are available on request. Certain commodity indexes which exclude adjustments for exchange, duty and federal sales tax can also be provided on request.

Les indices pondérés en fonction de la base donnent une estimation de la différence du prix d'achat d'un groupe de machines déterminé pour une période de base donnée.

La base provisoire pour les indices est 1968=100. La plupart des données dont on a extrait les facteurs de pondération dataient de 1968 environ. D'habitude, ces données étaient fournies par les principaux acheteurs.

Du point de vue conceptuel, on devrait utiliser les prix des acheteurs dans ce genre d'indices, mais on a habituellement employé les prix de vente de fabricants pour des question d'ordre pratique. On a ensuite apporté à ces prix les corrections appropriées pour les droits de douane, le change et la taxe de vente fédérale.

Les prix étrangers utilisés dans l'indice sont les indices de prix des marchandises du *U.S. Bureau of Labour Statistics* ou ceux que la Division des prix a recueillis auprès des fabricants dont la majorité réside aux États-Unis.

Le premier indice par industrie a été publié au milieu de 1971; il se rapporte aux achats de l'industrie de la construction. Les indices des autres industries seront publiés de temps à autre, à mesure qu'ils seront disponibles. En attendant, on peut obtenir sur demande les indices préliminaires pour un certain nombre d'autres industries. Il en est de même pour certains indices de prix de marchandises, compte non tenu des ajustements pour le change, les droits de douane et la taxe de vente fédérale.

NOTES ON PRICES AND PRICE INDEX NUMBERS

Industry Selling Price Index: Manufacturing (1961 = 100)

The industry selling price index (Total Manufacturing) rose 1.5% in November to 182.4 from the October index of 179.7. It was 21.3% higher than the November 1973 index of 150.4.

In terms of the relative contribution to the overall change in the total manufacturing index, more than half the increase came from the foods and beverages group, (4.2%) with advances in sugar refineries (40.5%), the slaughtering and meat packing industry (2.5%) and pasturizing plants (6.0%). In the miscellaneous manufacturing group higher prices were reflected in the jewellery and silverware industry (4.4%). Price increases recorded in pulp and paper mills (1.0%) were mainly responsible for the higher level registered in the paper and allied products group.

Decreases during the month were relatively insignificant.

NOTES SUR LES PRIX ET LES NOMBRES INDICES DES PRIX

Indice des prix de vente dans l'industrie: industries manufacturières (1961 = 100)

L'indice des prix de vente dans l'industrie (pour toutes les industries manufacturières) a augmenté de 1.5% pour passer de 179.7 en octobre à 182.4 en novembre. L'indice était de 21.3% supérieur à celui de novembre 1973 (150.4).

En termes de contribution proportionnelle à la hausse générale de l'indice de toutes les industries manufacturières, le groupe des aliments et des boissons a représenté plus de la moitié de l'augmentation; ce groupe a augmenté de 4.2% par suite d'augmentations de 40.5% dans les raffineries de sucre, de 2.5% dans l'industrie de l'abattage du bétail et de la préparation de la viande et de 6.0% dans les établissements de pasteurisation. Dans le groupe des industries manufacturières diverses, on a enregistré des augmentations dans l'industrie de la bijouterie et de l'orfèvrerie (4.4%). Les prix ont augmenté dans l'industrie des pâtes et papiers (1.0%); c'est pourquoi l'indice de l'industrie du papier et produits connexes a connu une telle hausse.

Les baisses enregistrées ce mois-ci n'ont guère été sensibles.

These indexes are preliminary. — Ces indices sont provisoires.

General Wholesale Price Index (1935-39 = 100)

The general wholesale price index rose 2.7% in November to 490.9 from the revised October index of 478.1. Six of the eight major groups were higher while two declined.

The vegetable products group index rose 8.8% in November to 570.7 from the revised October index of 524.3 reflecting price increases for sugar and its products, fresh vegetables, tobacco, tea, coffee and cocoa, canned vegetables, grains and milled cereal food. An advance of 1.9% to 506.3 from the revised October index of 496.7 in the animal products group was the result of higher prices for livestock, lard and tallow and fresh meats. Advances to a lesser degree were recorded in four major group indexes, wood products 0.8% to 570.2 from 565.8, chemical products 0.5% to 353.3 from revised 351.6, non-metallic minerals 0.3% to 353.8 from revised 352.9 and iron products 0.2% to 471.5 from revised 470.4.

Decreases occurred in the textiles group 0.9% to 423.0 from revised 426.9 and in the non-ferrous metals group 0.1% to 423.1 from revised 423.7.

Indice général des prix de gros (1935-39 = 100)

L'indice général des prix de gros est passé de 478.1 en octobre (chiffre rectifié) à 490.9 en novembre, soit une augmentation de 2.7%. On a enregistré des hausses dans six des huit groupes et des baisses dans les deux autres groupes.

L'indice du groupe des produits d'origine végétale a augmenté de 8.8% pour passer de 524.3 en octobre (chiffre rectifié) à 570.7 en novembre, à la suite des hausses du prix du sucre et de ses produits, des légumes frais, du tabac, du thé, du café et du cacao, des légumes en conserve, des céréales et des aliments pour animaux. L'indice du groupe des produits d'origine animale a augmenté de 1.9% pour passer de 496.7 en octobre (chiffre rectifié) à 506.3 en novembre, à la suite des hausses du prix du bétail, de la graisse de porc et du suif ainsi que des viandes fraîches. Des hausses moins sensibles ont été enregistrées dans quatre groupes principaux, soit les produits du bois (0.8%, de 565.8, chiffre rectifié, à 570.2), les produits chimiques (0.5%, de 351.6, chiffre rectifié, à 353.3), les minéraux non métalliques (0.3%, de 352.9, chiffre rectifié, à 353.8) et les produits du fer (0.2%, de 470.4, chiffre rectifié, à 471.5).

On a enregistré des baisses dans le groupe des textiles qui est passé de 426.9 (chiffre rectifié) à 423.0, soit 0.9% de moins, et dans le groupe des métaux non ferreux qui est passé de 423.7 (chiffre rectifié) à 423.1, soit 0.1% de moins.

* These indexes are preliminary. - Ces indices sont provisoires.

Security Price Indexes (1961 = 100)

The common stock prices index decreased 2.9% in November to 132.5. Among the three major groups, industrials registered a 3.7% loss to 136.3; utilities decreased 0.5% to 111.8; and finance recorded a decrease of 1.5% to 144.7. Among the thirteen industrial sub-groups, the major decrease was registered in the textiles and apparels index with 11.5% to 114.6. With regard to utilities, the electric power stock prices decreased 4.0% to 71.2; on the other hand, the telephone companies stock prices increased 2.3% in November to 185.4: this is the only sub-group (except the gold metals index) which increased from November 1973. The finance index decrease resulted from losses of 3.9% in banks (169.8), which offset the 7.0% increase in investments and loans (105.8).

During the same period, the index of stock prices in mining increased 2.9% to 124.1, reflecting the 9.1% increase for the gold metals index (219.6) which offset the 6.1% loss for common metals (72.8).

In the case of the two supplementary indexes, uranium registered a decrease of 4.6% to 200.5, while primary oil and gas decreased 3.7% to 250.8.

The preferred stock index moved down 1.9% to 56.1 in November from 57.2 in October.

Canadian Farm Products Price Index (1935-39 = 100)

The price index of Canadian farm products at terminal markets advanced 1.9% to 510.8 in November from the revised October index of 501.1. An increase of 3.8% to 579.6 from 558.5 in the animal products index reflected higher prices for lambs, steers and fluid milk on both Eastern and Western markets, and for hogs in the East. Lower prices were shown for raw wool and eggs on both markets, for poultry and cheesemilk in the East and for calves and hogs in the West.

The field products index declined 0.4% to 442.0 from 443.6 due to lower prices for potatoes, corn and barley in the West, for flax in the West and for rye on both markets. Higher prices were shown for tobacco and wheat in the East, for potatoes in the West, and for hay on both markets.

Thirty Industrial Materials Price Index (1935-39 = 100)

The price index of thirty industrial materials, calculated as an unweighted geometric average, decreased 0.4% to 512.0 in November from the revised October index of 513.8. Prices were lower for six commodities, higher for twelve and unchanged for twelve. Principal changes included decreases for raw wool, linseed oil, raw rubber, beef hides, domestic copper, and raw cotton while increases were shown for raw sugar, steers, white lead, tin, unbleached sulphite pulp, oats, domestic wheat, hogs, spruce lumber, iron ore, bleached sulphite pulp and crude oil.

Indices des cours des valeurs mobilières (1961 = 100)

L'indice des cours des actions ordinaires a diminué de 2.9% en novembre, pour s'inscrire à 132.5. Parmi les trois grands groupes, les valeurs industrielles ont enregistré une perte de 3.7% pour s'établir à 136.3, les services publics accusent une baisse de 0.5% pour se fixer à 111.8, et les finances ont perdu 1.5% pour marquer 144.7. Parmi les treize sous-groupes industriels, la diminution la plus importante a été de 11.5% dans le prix des actions des textiles et vêtements dont l'indice s'est stabilisé à 114.6. En ce qui concerne les services publics, les valeurs de l'énergie électrique ont diminué de 4.0% pour marquer 71.2; d'autre part, les actions des compagnies de téléphone ont augmenté de 2.3% en novembre pour atteindre 85.4: c'est le seul sous-groupe (exception faite des aurifères) qui présente une augmentation (2.2%) par rapport au même mois, un an auparavant. La baisse de l'indice des finances est due à une perte de 3.9% de l'indice bancaire (169.8) qui était suffisante à contrebalancer une augmentation de 7.0% des placements et des prêts qui s'inscrivent à 105.8.

Au cours de la même période, l'indice des prix des titres miniers a augmenté de 2.9% pour s'établir à 124.1, à la suite d'une augmentation de 9.1% des aurifères (219.6) qui a annulé la perte de 6.1% subie dans les métaux communs (72.8).

Pour ce qui est des deux indices de prix supplémentaires, on a observé une diminution de 4.6% dans le cas de l'uranium qui s'est fixé à 200.5, alors que le pétrole et le gaz primaires accusaient une baisse de 3.7% et tombaient à 250.8.

L'indice des actions privilégiées a diminué de 1.9% passant de 57.2 en octobre à 56.1 en novembre.

Indice des prix des produits agricoles canadiens (1935-39 = 100)

L'indice des prix des produits agricoles canadiens sur les marchés terminaux a augmenté de 1.9% pour passer de 501.1 en octobre (chiffre rectifié) à 510.8 en novembre. La hausse de 3.8% de l'indice des produits d'origine animale (558.5 à 579.6) fait suite aux augmentations du prix des agneaux, des bouvillons et du lait naturel sur les marchés de l'Ouest comme de l'Est, et des porcs dans l'Est. On a enregistré des diminutions de prix pour la laine brute et les oeufs sur les deux marchés, pour la volaille et le lait à fromage dans l'Est et pour les veaux et les porcs dans l'Ouest.

L'indice des produits de grande culture a baissé de 0.4% pour passer de 443.6 à 442.0 par suite des diminutions de prix des pommes de terre, du maïs et de l'orge dans l'Est, du lin dans l'Ouest et du seigle sur les deux marchés. On a enregistré des hausses de prix pour le tabac et le blé dans l'Est, pour les pommes de terre dans l'Ouest et pour le foin sur les deux marchés.

Indice des prix de trente matières industrielles (1935-39 = 100)

L'indice des prix de trente matières industrielles, calculé en moyenne géométrique non pondérée, a diminué de 0.3% pour passer de 513.8 en octobre (chiffre rectifié) à 512.0 en novembre. On a enregistré des baisses de prix pour six marchandises, des augmentations pour douze, tandis que douze autres n'ont pas varié. Les principales baisses ont été observées pour la laine brute, l'huile de lin, le caoutchouc brut, les peaux de boeuf, le cuivre canadien et le coton brut; par ailleurs, on a enregistré des hausses pour le sucre brut, les bouvillons, le plomb blanc, l'étain, la pâte de bois non blanchie au sulphite, l'avoine, le blé canadien, les porcs, les sciages d'épinette, le minerai de fer, la pâte de bois blanchie au sulphite et le pétrole brut.

Consumer Price Movements

The Consumer Price Index for Canada (1961=100) rose 1.1% to 174.1 in November from 172.2 in October. About one-third of this advance was attributable to a 1.3% increase in the Food component; almost a further third was due to higher automobile purchase, operation and maintenance prices which moved the Transportation index up 2.4%. A rise of 0.7% in the Housing component contributed a further fifth to the overall CPI advance. The Health and Personal Care index rose 1.2% and that for Recreation, Education and Reading 0.8%. Both the Clothing and the Tobacco and Alcohol components went up 0.6%. Between November 1973 and November 1974, the All-Items Index advanced 12.0%.

The Food index rose 1.3% to 198.8 in November from 196.3 in October as the level of prices for home-consumed food advanced 1.1% and that for food eaten outside the home went up 2.0%. Though most foods for home consumption registered increases this month, the major contributors were fresh milk, fresh vegetables and sugar. On the other hand, seasonally lower prices were recorded at the beginning of November for fresh fruit and average beef, pork and poultry prices also declined in the latest month. Led by an 8.6% increase in fresh milk prices, all surveyed dairy product items registered increases. Sugar and such related products as soft drinks and jam continued their sharp price climb: between October and November sugar prices rose a further 11.6%. In contrast, meat and poultry prices moved downwards with beef and pork falling 3.4% and 1.9%, respectively, and poultry dropping 1.3%. Compared with twelve months earlier, only the meat, poultry and eggs, among major components of the food basket, showed lower price levels. In the latest month, however, egg prices rose 3.3%. A seasonal decline of 6.5% was recorded in the fresh fruit index, contrasting with an average 11.9% advance in fresh vegetables which was mainly caused by sharply increased prices for tomatoes and lettuce. Among other foodstuffs, the cereal and bakery products index rose 1.0% despite a fractional decline in bread prices. Fats and oils continued to rise in price, advancing 2.2% in the latest month and almost 54% in the past year. Between November 1973 and November 1974, the total Food index increased 15.7% with the price of food consumed at home rising 15.3% and that for food away from home 18.0%.

The Housing index rose 0.7% to 172.0 in November from 170.8 in October. Within the shelter component, home-ownership costs moved up 0.6% and rents advanced 0.4%. The household operation element rose 1.0% mainly in response to widespread price increases for housewares, furniture and household supply items such as detergents, floor wax and food wrap. In addition, increases were registered for linen, draperies and floor coverings. Domestic gas rates rose in some centres, but fuel oil prices declined marginally in a number of Ontario cities. In the twelve months to November 1974, the Housing index advanced 10.2%.

Mouvements des prix à la consommation

L'indice des prix à la consommation au Canada (1961=100) a augmenté de 1.1%, passant de 172.2 en octobre à 174.1 en novembre. Un tiers environ de cette hausse est attribuable à l'augmentation de 1.3% de l'indice des aliments; près d'un tiers encore est imputable à l'augmentation de 2.4% de l'indice des transports (à la suite de la hausse du prix d'achat, d'exploitation et d'entretien des voitures). Un cinquième de l'augmentation globale de l'I.P.C. est dû à la hausse de 0.7% de l'indice de l'habitation. L'indice de l'hygiène et des soins personnels a augmenté de 1.2% et celui des loisirs, formation et lecture, de 0.8%. Les indices de l'habillement et des tabacs et alcools ont augmenté tous les deux de 0.6%. De novembre 1973 à novembre 1974, l'indice d'ensemble a augmenté de 12.0%.

L'indice des aliments a augmenté de 1.3%, passant de 196.3 en octobre à 198.8 en novembre. En effet, les prix des aliments consommés à la maison ont augmenté de 1.1%, et ceux des aliments pris au restaurant de 2.0%. Le prix de la plupart des aliments consommés à la maison a augmenté ce mois-ci les majorations plus importantes ayant été observées pour le lait frais, les légumes frais et le sucre. Par contre, on a enregistré des baisses de prix saisonnières au début de novembre pour les fruits frais, et les prix moyens du boeuf, du porc et de la volaille ont baissé également. Il y a eu augmentation des prix de tous les produits laitiers observés lors de l'enquête, augmentation dominée par la hausse de 8.6% du prix du lait frais. Le sucre et les produits contenant du sucre, comme les boissons gazeuses et les confitures, ont continué d'augmenter rapidement: entre octobre et novembre, le prix du sucre a encore augmenté de 11.6%. Par contre, le prix des viandes et de la volaille a baissé; il y a eu des diminutions de prix de 3.4% et de 1.9% pour le boeuf et le porc respectivement et de 1.3% pour la volaille. Comparativement à un an plus tôt, seuls les prix de la viande, de la volaille et des oeufs ont baissé, comme éléments du panier alimentaire. Toutefois, le prix des oeufs a augmenté de 3.3%. On a enregistré une baisse saisonnière de 6.5% de l'indice des fruits frais, mais les légumes frais ont augmenté en moyenne de 11.9% à la suite de la forte augmentation du prix des tomates et de la laitue. S'agissant des autres produits alimentaires, l'indice des produits de boulangerie et des céréales a augmenté de 1.0% en dépit d'une baisse partielle du prix du pain. Le prix des huiles et graisses a continué d'augmenter, progressant de 2.2% au cours du mois observé et de près de 54% par rapport à l'année dernière. De novembre 1973 à novembre 1974, l'indice global des aliments a augmenté de 15.7%, le prix des aliments consommés à la maison et celui des aliments pris au restaurant progressant respectivement de 15.3% et de 18.0%.

L'indice de l'habitation s'est accru de 0.7%, passant de 170.8 en octobre à 172.0 en novembre. S'agissant de l'élément logement, on a enregistré des hausses de 0.6% pour les frais de propriété et de 0.4% pour les loyers. L'élément dépenses de ménage a augmenté de 1.0% en raison principalement des augmentations généralisées de prix des articles ménagers, des meubles et des fournitures ménagères comme les détergers, la cire à plancher et les emballages pour la nourriture. De plus, on a observé une majoration du prix du linge de maison, des rideaux et des revêtements de sol. Les tarifs du gaz domestique ont augmenté dans certains centres, mais le prix du mazout a très légèrement diminué dans un certain nombre de villes en Ontario. De novembre 1973 à novembre 1974 l'indice de l'habitation a augmenté de 10.2%.

The Clothing index rose 0.6% to 157.2 in November from 156.3 in October. Though most items surveyed moved up in price, this latest index rise was almost half that which occurred between October and November last year. The men's wear component, in advancing 1.0%, was a major contributor to the increase in the total clothing index. Significant contributions also came from the women's and children's wear elements which went up 0.4% and 0.9%, respectively. The footwear index rose 0.5% and that for piece goods 0.2%. In the latest twelve months the Clothing index advanced 9.3%.

The Transportation index rose 2.4% to 157.1 in November from 153.4 in October with over half of this advance attributable to higher prices for 1975 model automobiles which, after adjustment for quality changes, retailed 4.2% above those of the year-end 1974 models. Another major contributor was a general increase in automobile repair parts and labour charges. Although motor oil prices rose in a number of centres, the average price of gasoline edged down for the fifth consecutive month to stand 2.4% below its peak of last June. In the twelve-month period ending November 1974, the Transportation index went up 12.1%.

The Health and Personal Care index rose 1.2% to 177.6 in November from 175.4 in October mainly because of higher charges for women's hairdressing and men's haircuts and a number of major centres, and general increases for some toiletry items. In November 1974, the Health and Personal Care index stood 10.4% above its level of a year previous.

The Recreation, Education and Reading index moved up 0.8% to 165.6 in November from 164.3 in October. Main contributors to the latest advance were generally higher prices for sports equipment and camera film (including processing), increased newspaper subscription rates in some centres and higher movie admission charges mainly in Quebec and Ontario. Between November 1973 and November 1974, the Recreation, Education and Reading index rose 11.7%.

The Tobacco and Alcohol index rose 0.6% to 148.7 in November from 147.8 in October with most of the increase being attributable to generally higher prices for liquor and beer consumed in licensed premises. In the latest twelve months, the Tobacco and Alcohol index advanced 8.6%.

Consumer price movements, reclassified by goods and services, offer another view of the incidence of price change. Between October and November, the total goods index advanced 1.4% with the main impetus coming from non-durable goods which rose 1.2% mainly in response to higher prices for food, alcoholic beverages, domestic supplies and automobile repair parts. The index for durable goods rose 2.8% chiefly because of higher quotations for automobiles and furniture. Semi-durable goods advanced 1.0% mainly in response to higher prices for clothing, household furnishings and utensils. A rise of 0.6% was recorded in the services index with the major contributors being the shelter and

L'indice de l'habillement a augmenté de 0.6%, passant de 156.3 en octobre à 157.2 en novembre. Le prix de la plupart des articles d'habillement observés lors de l'enquête a augmenté, mais l'augmentation de l'indice représente presque la moitié de celle qui s'est produite entre octobre et novembre l'année dernière. L'indice a augmenté surtout à la suite de la hausse du prix des vêtements pour hommes, soit 1.0%. D'autres éléments ont contribué de façon appréciable à cette progression de l'indice, à savoir les vêtements pour femmes (+0.4%) et les vêtements pour enfants (+0.9%). Le prix des chaussures a augmenté de 0.5% et celui des tissus à la verge, de 1.2%. L'indice de l'habillement a augmenté de 9.3% au cours des douze derniers mois.

L'indice des transports a augmenté de 2.4%, passant de 153.4 en octobre à 157.1 en novembre. Plus de la moitié de cette augmentation s'explique par la majoration des prix des voitures de modèle 1975 qui, après ajustement pour des raisons de changement de qualité, se sont vendues, au détail, 4,2% plus chères que les modèles de fin d'année de 1974. L'augmentation générale du prix des pièces de rechange automobiles et des coûts de main-d'oeuvre a également joué un rôle important dans cette progression de l'indice. Bien que le prix de l'huile à moteur ait augmenté dans un certain nombre de villes, le prix moyen de l'essence a légèrement diminué pour le cinquième mois consécutif pour s'établir à 2.4% au-dessous de son sommet de juin dernier. Au cours de la période de douze mois se terminant en novembre 1974, l'indice des transports a augmenté de 12.1%.

L'indice de soins personnels et hygiène a augmenté de 1.2%, passant de 175.4 en octobre à 177.6 en novembre. Cette hausse est surtout attribuable à l'augmentation des tarifs des coiffeurs pour dames et pour hommes dans un certain nombre de villes et une augmentation générale de certains articles de toilette. En novembre 1974, l'indice de l'hygiène et des soins personnels a augmenté de 10.4% par rapport à l'année précédente.

L'indice des loisirs, formation et lecture a augmenté de 0.8%, passant de 164.3 en octobre à 165.6 en novembre. Cette hausse s'explique principalement par l'augmentation générale des prix de l'équipement sportif et des films (y compris le développement), par la hausse des tarifs d'abonnement aux journaux dans certains centres et par l'augmentation des prix d'entrée au cinéma, surtout en Ontario et au Québec. De novembre 1973 à novembre 1974, l'indice des loisirs, formation et lecture a augmenté de 11.7%.

L'indice des tabacs et alcools a augmenté de 0.6%, passant de 147.8 en octobre à 148.7 en novembre. L'essentiel de cette hausse est dû à l'augmentation générale des prix des boissons alcooliques et de la bière consommées dans des lieux publics autorisés. De novembre 1973 à novembre 1974, l'indice des tabacs et alcools a augmenté de 8.6%.

Le classement par biens et services du mouvement des prix à la consommation permet de voir les variations de prix sous un autre angle. Entre octobre et novembre, l'indice total des biens a augmenté de 1.4%, surtout à cause de l'élément biens non durables, qui a augmenté de 1.2% par suite de la majoration du prix des aliments, des boissons alcooliques, des fournitures ménagères et des pièces de rechange automobiles. L'indice des biens durables a augmenté de 2.8% en raison principalement de la hausse du prix des automobiles et des meubles. Les biens semi-durables ont augmenté de 1.0% à cause de la hausse du prix des articles vestimentaires, des articles d'ameublement et des ustensiles ménagers. On a enregistré une hausse de 0.6% de l'indice des services,

personal care elements and the labour component of automobile repairs. In the latest twelve months, the total goods index advanced 13.4% and that for services 9.3%.

à la suite de la hausse des coûts de logement et des articles de soins personnels, ainsi que des coûts de main-d'oeuvre pour les réparations automobiles. De novembre 1973 à novembre 1974, l'indice global des biens a augmenté de 13.4% et celui des services, de 9.3%.

Retail trade - Commerce de détail	120.2	114.8	148.8	157.8	4.7	- 5.7	- 19.2
Utilities - Total - Services publics	111.8	112.4	140.2	141.9	- 0.5	- 1.2	- 20.3
Pipeline - Pipe-line	98.7	101.0	143.1	142.1	- 2.3	0.7	- 31.0
Transportation - Transport	255.5	255.4	314.7	328.5	0.0	- 4.2	- 18.8
Telephone - Téléphone	85.4	83.5	83.6	84.6	2.3	- 1.2	2.2
Electric power - Énergie électrique	71.2	74.2	113.4	114.7	- 4.0	- 1.1	- 37.2
Gas distribution - Distribution du gaz	127.8	130.2	160.9	154.7	- 1.8	4.0	- 20.6
Finance - Total - Finances	144.7	146.9	188.5	191.1	- 1.5	- 1.4	- 23.2
Banks - Banques	169.8	176.7	222.6	224.0	- 3.9	- 0.6	- 23.7
Investment and loan - Placements et prêts	105.8	98.9	135.3	140.4	7.0	- 3.6	- 21.8
<u>Mining - Actions minières</u>							
Mining index - Total - Indices des prix des titres minières	124.1	120.6	138.2	139.0	2.9	- 0.6	- 10.2
Gold - Or	219.6	201.2	173.1	162.3	9.1	6.7	26.9
Base metals - Métaux communs	72.8	77.5	120.3	127.5	- 6.1	- 5.6	- 39.5
<u>Supplementary indexes - Indices supplémentaires</u>							
Uranium - L'uranium	200.5	210.1	299.8	270.9	- 4.6	- 10.7	- 33.1
Primary oils and gas - Pétrole et gaz primaires	250.8	260.4	501.4	460.4	- 3.7	8.9	- 50.0

- (1) Gross weighted, including inter-industry shipments. For explanation see page 88. - Indice pondéré brut comprenant les livraisons inter-industrielles. Pour toute explication, voir page 88.
- (2) Indexes for 1973 and 1974 are subject to revision. - Les indices pour 1973 et 1974 sont sujets à révision.
- (3) Year to year percentage change not shown since these indexes are not comparable. Indexes subsequent to July 1973 are subject to revision. See notes page 89 for details of Western grain prices. - La variation proportionnelle d'une année à l'autre n'est pas indiquée étant donné que ces indices ne sont pas comparables. Les indices postérieurs à juillet 1973 sont sujets à révision. Voir les renvois de la page 89 pour les prix détaillés des grains de l'Ouest.

(2) This industry was changed in commodity content, price sample and weights in accordance with significant changes within the industry. Figures are revised from January 1971 to date. - La composition en marchandises, les échantillons de prix et les mesures de poids ont changé dans cette industrie conformément à des changements importants survenus dans l'industrie même. Les chiffres sont révisés de janvier 1971 à aujourd'hui

(3) Effective January 1973 changes have been made in the calculation of this index. For details see page 88. - À compter de janvier 1973, on a modifié le calcul de cet indice. Pour plus de détails, voir la page 88.

(4) An extensive revision of the weight and price sample (including the incorporation of goods purchased and resold in same condition as purchased) necessitated by developments in the industry's production pattern since 1961 have resulted in the introduction of new price indexes and a discontinuity in the industry price index. - Une révision approfondie de l'échantillon des pondérations et des prix (y compris l'intégration des biens achetés et revendus sans aucune modification), nécessitée par l'évolution du régime de production de l'industrie depuis 1961, a amené l'adoption de nouveaux indices des prix ainsi qu'une solution de continuité dans l'indice des prix industriels.

	Old Series	New series
	-	-
	Ancienne série	Nouvelle série
December - 1970 - Décembre	95.1	92.3
January - 1971 - Janvier	95.1	92.1
Average - 1971 - Moyenne	95.2	91.8

(5) This series has been revised from January 1969 forward. An expanded list of establishments and commodities has been selected and prices for these have been aggregated to a total industry index using 1971 shipments data. The price quotations are, in general, of an improved quality. Selected commodity data on a 1971 time and weight base, are available on request. - Les chiffres de cette série ont été révisés à partir de janvier 1969. Une liste augmentée des établissements et des produits a été établie, et les prix de ces produits ont été agrégés pour former un indice total de l'activité économique à partir des données sur les livraisons de 1971. De manière générale, le calcul des prix est plus fiable. Les utilisateurs peuvent obtenir sur demande des données sur certains produits utilisant les facteurs de pondération de 1971 et dont la période de référence est 1971.

(6) Motor gasoline prices are 'List' and may not be a reflection of actual transaction prices. - Les prix de l'essence sont des prix de détail suggérés et peuvent ne pas traduire les prix réels à la transaction.

(7) Gross weighted, including inter-industry shipments. For explanation see page 88. - Indice pondéré brut comprenant les livraisons inter-industrielles. Pour toute explication voir page 88

ALL-ITEMS Consumer Price Index Converted to 1949=100 - November 1974 - L'indice des prix à la consommation de tous les éléments converti à 1949=100 - Novembre 1974 224.9

(1) Indexes prior to May 1973 incorporate 1957 expenditure weights, those for May 1973 forward are based on 1967 expenditures. The revised series is linked to its predecessor at April 1973. For further explanation, see page 92. - Avant mai 1973 les indices étaient calculés à l'aide des pondérations fondées sur les dépenses de 1957; à partir de mai 1973 ils sont calculés à l'aide des pondérations fondées sur les dépenses de 1967. Les séries révisées sont raccordées aux précédentes en avril 1973. Pour plus de renseignements, voir page 92.

(1) Indexes prior to May 1973 incorporate 1957 expenditures weights, those for May 1973 forward are based on 1967 expenditures. The revised series is linked to its predecessor at April 1973. For further explanation see page 92. - Avant mai 1973 les indices étaient calculés à l'aide des pondérations fondées sur les dépenses de 1957; à partir de mai 1973 ils sont calculés à l'aide des pondérations fondées sur les dépenses de 1967. Les séries révisées sont raccordées aux précédentes en avril 1973. Pour plus de renseignements, voir page 92.

(2) Excludes accessories and notions. - Ne comprend pas les accessoires et menus articles.

(3) Includes clothing accessories and notions. - Comprend les accessoires et menus articles vestimentaires.

(4) Includes constant weighted food component. - Comprend l'élément aliments calculé à l'aide de pondérations constantes.

TABLE 11. Consumer Price Indexes, Regional Cities(1)

TABLEAU 11. Indices des prix à la consommation, agglomérations urbaines(1)

1961=100

Note: (i) These indexes measure within each city the percentage change in consumer prices from the base period to the subsequent time periods. They cannot be used to compare levels of prices between cities. (ii) For inter-city indexes of retail price differentials refer to Table 14. - **Nota:** (i) Les indices mesurent dans chaque ville le pourcentage de variation des prix à la consommation depuis la période de base jusqu'à des périodes subséquentes. Ils ne peuvent servir à comparer les niveaux des prix d'une ville à l'autre. (ii) Pour les indices comparatifs des prix de détail, se reporter au tableau 14.

(1) Indexes prior to May 1973 incorporate 1957 expenditure weights, those for May 1973 forward are based on 1967 expenditure. The revised series is linked to its predecessor at April 1973. For further explanation, see page 92. - Avant mai 1973 les indices étaient calculés à l'aide des pondérations fondées sur les dépenses de 1957; à partir de mai 1973 ils sont calculés à l'aide des pondérations fondées sur les dépenses de 1967. Les séries révisées sont raccordées aux précédentes en avril 1973. Pour plus de renseignements, voir page 92.

(2) Until April 1973, the shelter element of regional cities' housing indexes moved on the basis of changes in rents only. However, from May 1973 on, homeownership has been included in the shelter element of regional cities' housing indexes, so that the Canada and regional city shelter indexes now contain the same elements. See also page 93. - Jusqu'en avril 1973, l'élément logement des indices de l'habitation des agglomérations urbaines était basé uniquement sur les variations des loyers. Toutefois, depuis mai 1973, les frais de possession d'une maison ont été incorporés à l'élément logement des indices de l'habitation des agglomérations urbaines; il en résulte que les indices du logement pour le Canada et pour les agglomérations urbaines comportent maintenant les mêmes éléments. Voir aussi la page 93.

(3) Includes shelter and household operation. Until April 1973, the shelter element of regional cities' housing indexes moved on the basis of changes in rents only. However, from May 1973 on, homeownership has been included in the shelter element of regional cities' housing indexes, so that the Canada and regional city shelter indexes now contain the same elements. See also page 93. - Comprend le logement et l'entretien du ménage. Jusqu'en avril 1973, l'élément logement des indices de l'habitation des agglomérations urbaines était basé uniquement sur les variations des loyers. Toutefois, depuis mai 1973, les frais de possession d'une maison ont été incorporés à l'élément logement des indices de l'habitation des agglomérations urbaines; il en résulte que les indices du logement pour le Canada et pour les agglomérations urbaines comportent maintenant les mêmes éléments. Voir aussi la page 93.

Dec. -	Déc.								

(1) Indexes prior to May 1973 incorporate 1964 expenditure weights, those for May 1973 forward are based on 1967 expenditures. The revised series is linked to its predecessor at April 1973. For further explanation, see page 92. - Avant mai 1973 les indices étaient calculés à l'aide des pondérations fondées sur les dépenses de 1964; à partir de mai 1973 ils sont calculés à l'aide des pondérations fondées sur les dépenses de 1967. Les séries révisées sont raccordées aux précédentes en avril 1973. Pour plus de renseignements, voir page 92.

(2) Includes shelter and household operation. Until April 1973, the shelter element of regional cities housing indexes moved on the basis of changes in rents only. However, from May 1973 on, homeownership has been included in the shelter element of regional cities' housing indexes, so that the Canada and regional city shelter indexes now contain the same elements. See also page 93. - Comprend le logement et l'entretien du ménage. Jusqu'en avril 1973, l'élément logement des indices de l'habitation des agglomérations urbaines était basé uniquement sur les variations des loyers. Toutefois, depuis mai 1973, les frais de possession d'une maison ont été incorporés à l'élément logement des indices de l'habitation des agglomérations urbaines; il en résulte que les indices du logement pour le Canada et pour les agglomérations urbaines comportent maintenant les mêmes éléments. Voir aussi la page 93.

(1) Indexes for 1974 are subject to revision. Les indices pour 1974 sont sujets à révision.

(2) The Canada Index is the weighted average of the General Contractors and the Sub-trade Contractors Indexes as well as being the weighted average of the regional indexes. L'indice pour le Canada est la moyenne pondérée des indices des entrepreneurs généraux et sous-traitants. Il correspond également à la moyenne pondérée des indices régionaux.

Déc.								

(1) Indexes for 1974 are subject to revision. - Les indices pour 1974 sont sujets à révision.

(2) From Table 18. For explanation of recent revisions see Vol 1, No. 7 of Construction Price Statistics, Service Bulletin 62-006. - Du tableau 18. Pour une explication des récentes révisions voir Vol 1, No. 7 du bulletin de service "Statistique des prix dans la construction" 62-006.

(3) National Income and Expenditure Accounts, Catalogue 13-001, quarterly. - (No. 13-001 au catalogue, trimestriel).

(4) Indexes for 1973 and 1974 are subject to revision. - Les indices pour 1973 et 1974 sont sujets à révision.

(5) From Table 19. For explanation of recent revisions see Vol 1, No. 10 of Construction Price Statistics, Service Bulletin 62-006. - Du tableau 19. Pour une explication des récentes révisions voir Vol 1, No. 10 du bulletin de service "Statistique des prix dans la construction" 62-006.

(6) This series contains an engineering component as well as a building component, and is therefore not precisely comparable in coverage with the non-residential composite index. The implicit price indexes are adjusted for changes in contract profit and productivity. - Cette série comprend une composante génie aussi bien qu'une composante construction: elle n'a donc pas tout à fait la même portée que l'indice synthétique pour la construction non-résidentielle. Les indices synthétiques sont corrigés des variations des profits et de la productivité des entrepreneurs.

(1) To assist comparison with other published series the indexes presented have been arithmetically converted from 1956=100 to 1961=100. The 1956=100 indexes are available on request. - Pour faciliter la comparaison avec d'autres séries publiées, ces indices ont été recalculés sur la base 1961=100. Les indices originaux (1956=100) sont disponibles.

(2) The years refer to fiscal years. Thus 1961 refers to the period April 1, 1961 to March 31, 1962. - Années financières; par exemple, 1961 couvre la période du 1er avril 1961 au 31 mars 1962.

(3) Major components for the provincial indexes are presented annually in Construction Price Statistics, Service Bulletin No. 62-006. - Les principaux éléments des indices pour les provinces sont publiés annuellement dans le bulletin de service, Statistiques des Prix dans la Construction, no 62-006.

(4) Direct comparisons should not be made between this index and the highway index published by the Ontario Department of Transportation & Communications. The item content of the indexes is different. - On ne peut comparer directement cet indice avec celui de la voirie publié par le Département du transport et des communications de l'Ontario. Les éléments des deux indices sont différents.

Explanation of Methods Used and Additional Sources for Price Series

Industrial Price Indexes

Industry Selling Price Indexes (1961 = 100)

Industry selling price indexes are published for approximately 100 industries within manufacturing. Also published are approximately 425 commodity price indexes for the products of these industries. The Classification system is that of the 1960 standard industrial classification, thus permitting the joint use of price statistics with other data such as production and employment similarly classified.

The data upon which both the initial selection of commodities to be priced and responding firms are made are contained in the Census of Manufacturers, a series of annual surveys collecting statistics on shipments of commodities, employment and materials used. Prices are collected on the 15th of each month or the nearest transaction date for the commodity being priced; sales and excise taxes are excluded.

The industry classified price indexes are useful for analysis of price movements, for estimation of the constant dollar value of shipments, and for purposes of contract escalations.

A complete description of these indexes is contained in: Industry Selling Price Indexes 1956-68, Catalogue 62-528.

Industry Selling Price Index: Manufacturing

The index is gross weighted. It measures the movements of prices of gross shipments of manufacturing industries, including inter-industry shipments between individual industries within manufacturing. Therefore, it duplicates the movements of some prices in the sense that, for example, flour prices are given full weight as part of the shipments of the Flour Mills Industry and then are implicitly counted again through full weighting of the shipment prices of those manufacturing industries which use flour as an ingredient in their outputs, e.g., bread, biscuits, cakes, etc.

"Iron & Steel Mills:" 12-2910

The principal change in the index is as follows: From January 1973 forward prices collected from the various companies are, for any given commodity, weighted together in a way that reflects the relative importance of each company's shipments of the commodity to the total shipments of that commodity by all companies in the year 1971. In addition prices for stainless products were deleted from the series bars hot rolled etc. (12-2910-082), in September 1972 and from the series sheets and strip cold rolled etc. (12-2910-084) in October 1972. Prices for stainless products, however, are included in the price index for the iron and steel mills industry.

The concept of price change measured is net return to mill.

Explication des méthodes utilisées et sources supplémentaires des séries de prix

Indices des prix industriels

Indices des prix de vente dans l'industrie (1961 = 100)

Les indices des prix de vente dans l'industrie sont publiés pour environ 100 industries manufacturières. Près de 425 indices des prix des produits de ces industries sont également publiés. Les produits sont classés d'après la Classification type des industries de 1960, ce qui permet d'utiliser la statistique des prix avec d'autres données telles que la production et l'emploi classées de la même manière.

Les données sur lesquelles se fonde le choix initial des produits dont il faut déterminer le prix et des établissements enquêtés figurent dans le "recensement des manufactures", séries de bulletins sur les enquêtes annuelles au cours desquelles est recueillie des statistiques sur les expéditions de produits, sur l'emploi et sur les matières utilisées. La collecte des prix a lieu le 15 de chaque mois ou à la date de transaction la plus rapprochée pour le produit en question; les taxes de vente et droits d'accise sont pas pris en compte.

Les indices des prix classés par industrie servent à analyser les mouvements de prix, à estimer la valeur des expéditions en dollars constants et à indexer les contrats.

La description complète de ces indices est donnée dans "Indices des prix de vente dans l'industrie, 1956-68", (n° 62-528 au catalogue).

Indices des prix de vente dans l'industrie: Industries manufacturières

Il s'agit d'un indice pondéré brut. Il mesure les mouvements du prix des livraisons brutes des industries manufacturières y compris les livraisons inter-industrielles des industries manufacturières. Il prend donc deux fois en compte les mouvements de certains prix: les prix de la farine, par exemple, font l'objet d'une pondération complète comme ayant trait aux livraisons de meuneries et ils sont comptés à nouveau implicitement du fait de la pondération complète des prix de livraisons des industries manufacturières qui utilisent de la farine comme ingrédient dans leurs produits, tels que le pain, les biscuits ou les gâteaux.

"Sidérurgie:" 12-2910

Le principal changement apporté à l'indice est le suivant: depuis janvier 1973, les prix recueillis auprès des différentes sociétés sont, pour tout produit, pondérés de manière à refléter l'importance relative des livraisons de chaque société par rapport aux livraisons totales de ce produit par toutes les sociétés en 1971. En outre, les prix des produits en acier inoxydable ont été enlevés de la série "barres, laminés à chaud, etc." (12-2910-082) en septembre 1972 et de la série "tôles et feuillets, laminés à froid, etc." (12-2910-084) en octobre 1972. Ils sont toutefois compris dans l'indice des prix de l'industrie de la sidérurgie.

Le concept de la mesure de la variation des prix se fonde sur le revenu net à l'usine.

Purchase Price Indexes of Secondary Metals (1969 = 100)

Ferrous and non-ferrous indexes are compiled from a series of input prices, inclusive of transportation and brokerage fees, submitted by a wide variety of purchasers from selected industries. Indexes for certain categories of metals cannot be published because of the confidentiality of the data under the Statistics Act.

Canadian Farm Products Price Index (1935-39 = 100)

Prices of Western grains used in the index are Canadian Wheat Board buying prices for the grades listed below. Initial payments are first used in the index calculation and are revised as further payments are announced.

Final payments for the crop year August 1972 — July 1973 were announced on November 6, 1973 for wheat, oats and barley. The estimates of Final payments for the 1973-74 crop year are based on wheat Board predictions of April 1974.

Indices du prix d'achat des métaux de deuxième fusion (1969 = 100)

L'indice des métaux ferreux et non ferreux est établi à partir d'une série de prix comprenant les frais de transport et de dédouanement; ces données sont fournies par un large éventail de clients de certaines industries. Confidentiels en vertu de la Loi sur la statistique, les indices de certaines catégories de métaux ne peuvent être publiés.

Indice des prix des produits agricoles canadiens (1935-39 = 100)

Les prix des céréales de l'Ouest figurant dans l'indice représentent les prix à l'acheteur de la Commission canadienne du blé pour les catégories énumérées ci dessous. Les paiements initiaux servent d'abord au calcul de l'indice et sont ensuite révisés lorsque d'autres paiements sont annoncés.

Les prix définitifs pour la campagne allant d'août 1972 à juillet 1973 ont été annoncés le 6 novembre 1973, en ce qui concerne le blé, l'avoine et l'orge. Les estimations des paiements totaux pour la campagne agricole 1973-74 sont fondées sur les prévisions d'avril 1974 de la Commission canadienne du blé.

Used in original indexes from Aug. 1972 to July 1973. Utilisé dans les premiers indices d'août 1972 jusqu'en juillet 1973.
Incorporated retroactively in revised final indexes Aug. 1972 to July 1973. — Inclus rétroactivement dans les indices finals révisés d'août 1972 à juillet 1973.

Used in current indexes. — Utilisé dans les indices courants.

General Wholesale Index (1935-39 = 100)

The General Wholesale Index is a commodity classified index of prices. The index is "general" inasmuch as it incorporates a diverse selection of both primary and processed commodities. It is called "wholesale" because its ingredient prices relate to that broad and heterogeneous area of commodity distribution which excludes only retail trade. In fact, the term "wholesale" has more of a connotation of bulk trading than of any homogeneous level of distribution. Thus, though the index mainly includes prices of producers, it also covers transactions of "middle men" who trade in commodities of a type or in quantities characteristic of primary marketing functions.

Though general wholesale price indexes have been calculated by many countries for years there is no precise answer to the question of what such an index measures. This is so because the index cannot be associated with any adequately definable value aggregate. Unlike a consumer price index which can be identified with expenditures of household consumers, a general wholesale index covers a host of overlapping transactions sometimes involving the same ingredient in as many as three different stages of processing. Yet, conceptually, it is not a measure of the purchasing power of money because it omits significant areas of monetary transactions such as prices of land, labour, securities and services, except in so far as prices of these things are implicit in commodity prices. As a conventional summary figure, its use has tended towards a reference level against which to observe the behaviour of particular price groups such as farm products, industrial materials, building materials and the various other groupings for which indexes are published. And as an indicator of general business conditions it is usually included in the group which is regarded as approximately coincident with the business cycle. However, its main attribute now lies in its long historical continuity.

For further details about the General Wholesale Index please consult: *Wholesale Price Indexes 1913-50* (Reference Paper No. 24) *Prices and Price Indexes 1949-52* (Vol. 23) (Catalogue 62-501).

Thirty Industrial Materials, (1935-39 = 100)

The price index of thirty industrial materials is calculated as an unweighted geometric average of prices of the selected commodities. The formula is as follows:

$$\sqrt[30]{\frac{P^1_{tN} \times P^2_{tN} \times P^3_{tN} \times \dots \times P^{30}_{tN}}{P^1_{t\ 35-39} \times P^2_{t\ 35-39} \times P^3_{t\ 35-39} \times \dots \times P^{30}_{t\ 35-39}}}$$

Indice général des prix de gros (1935-39 = 100)

L'indice général des prix de gros est un indice des prix classés par produit. Cet indice est "général" du fait qu'il comprend une variété de produits primaires et de produits transformés. Il est appelé "de gros" parce que les prix qui le composent se rapportent au domaine vaste et hétérogène de la distribution des produits dont seul le commerce de détail est exclu. En réalité, l'expression "de gros" fait penser plus au commerce de gros qu'à un niveau homogène de distribution. Bien que l'indice comprenne surtout les prix établis par les producteurs, il englobe également les transactions des "intermédiaires" qui vendent des produits dont le genre et la qualité sont particuliers aux fonctions premières de la commercialisation.

De nombreux pays calculent l'indice général des prix de gros depuis des années; il n'en reste pas moins impossible de définir exactement ce que cet indice mesure, car on ne peut l'associer à une valeur globale que l'on puisse définir exactement. Contrairement à l'indice des prix à la consommation que l'on peut identifier grâce aux dépenses des ménages, l'indice général des prix de gros couvre une foule de transactions à double emploi impliquant parfois le même élément considéré jusqu'à trois étapes différentes de la transformation. Cependant, du point de vue conceptuel, cet indice ne constitue pas une mesure du pouvoir d'achat du dollar parce qu'il ne tient pas compte de transactions monétaires aussi importantes que le prix du terrain, du travail, des valeurs mobilières et des services, sauf si elles sont comprises dans le prix des produits. En tant que chiffre représentatif classique, on a tendance à s'en servir pour comparer le comportement de certains groupes de prix, par exemple, celui des produits agricoles, des matières industrielles, des matériaux de construction et de divers autres groupes pour lesquels on publie des indices. Comme indicateur de la situation générale du commerce, l'indice est habituellement intégré au groupe dont on considère qu'il correspond le plus exactement au cycle commercial. Sa qualité principale réside cependant dans sa longue continuité chronologique.

Pour plus de détails sur l'indice général des prix de gros consulter *Wholesale Price Indexes 1913-50* (Reference Paper No. 24) et *Prices and Price Indexes 1949-52* (Vol. 23) (n° 62-501 catalogue).

Indice des prix de trente matières industrielles (1935-39 = 100)

L'Indice des prix de trente matières industrielles est calculé comme moyenne géométrique non pondérée des prix de certaines marchandises. La formule est la suivante:

$$\sqrt[30]{\frac{P^1_{tN} \times P^2_{tN} \times P^3_{tN} \times \dots \times P^{30}_{tN}}{P^1_{t\ 35-39} \times P^2_{t\ 35-39} \times P^3_{t\ 35-39} \times \dots \times P^{30}_{t\ 35-39}}}$$

The selection of materials for pricing relates to groups such as "stable" prices, numbering 12, food prices, numbering 5 and "sensitive" prices, numbering 13. We plan to construct an index of industrial prices that will relate to current usage of materials and that will be of the more traditional Laspeyre's type in its construction. The presently published index contains prices for some materials that no longer constitute important industrial inputs.

The Consumer Price Index for Canada (1961=100)

The Consumer Price Index measures the percentage change through time in the cost of purchasing a constant "basket" of goods and services representing the purchases by particular population group in a specified time period. The "basket" is an unchanging or equivalent quantity and quality of goods and services, consisting of items for which there are continually measurable market prices over time.

The index relates to a broad but specific group of urban families and reflects the price changes experienced by that "target group". The index may not represent closely the experience of any one specific family within the group, nor could it be expected to reflect price change for other population groups for which income, family size and place of residence are characteristically different. The target group to which the current index relates is composed of families — (a) living in cities with over 30,000 population, (b) ranging in size from two to six persons and (c) with annual incomes in 1967 ranging from \$4,000 to \$12,000. To measure the influences of price change on the cost of goods and services purchased by such families, the Consumer Price Index reflects movements of some 300 items.

The history of consumer price indexes in Canada extends back to the early 1900's and encompasses periodic revisions of index base reference periods and weighting patterns. In January 1969, the time base was updated to 1961=100 from 1949=100; details are contained in the January 1969 issue of the monthly publication *Prices and Price Indexes*, Catalogue 62-002.

From March 1961 to April 1973 inclusive, the weights and relative importance of the items in the Consumer Price Index were based on 1957 family expenditure patterns; details of these weights can be found in *The Consumer Price Index for Canada (1949=100) (Revision Based on 1957 Expenditures)*, Catalogue 62-518. A subsequent weight revision to reflect 1967 family expenditure patterns (and within the food component, 1969 detailed spending habits) was introduced in May 1973. Full details of the latest weighting pattern and other background information on the Consumer Price Index is available in the occasional paper *The Consumer Price Index for Canada (1961=100) (Revision Based on 1967 Expenditures)*, Catalogue 62-539.

Le choix des matières servant au prélèvement des prix et se rapportant à des groupes tels que prix "stables", (12 matières), prix des aliments (5 matières) et prix "variables" (13 matières). Nous projetons d'établir un indice des prix industriels qui se rapportera à l'utilisation courante des matières et dont la structure se rapprochera plus du type Laspeyres plus traditionnel. L'indice publié ici renferme les prix de certaines matières qui ne sont plus considérées comme intrants importants dans l'industrie.

L'indice des prix à la consommation pour le Canada (1961=100)

L'indice des prix à la consommation mesure le taux de variation dans le temps du coût à l'achat d'un "panier" constant de biens et de services représentant les achats d'un groupe déterminé de la population au cours d'une période donnée. Le "panier" est constitué par des biens et des services en quantité et de qualité constantes; il comprend uniquement les biens et services qui ont un prix et dont les prix peuvent être observés de façon continue.

L'indice se rapporte à un groupe vaste, mais délimité, de familles urbaines et rend compte des changements de prix auxquels ce "groupe cible" doit faire face. L'indice peut ne pas suivre de près les changements de prix touchant une famille en particulier de ce groupe, pas plus que les changements de prix touchant d'autres groupes de la population dont le revenu, la taille des familles ou les lieux de résidence diffèrent sensiblement. Le groupe cible auquel se rapporte l'indice actuel se compose de familles a) vivant dans des villes de plus de 30,000 habitants, b) dont la taille est comprise entre deux et six personnes, et c) dont les revenus annuels en 1967 étaient compris entre \$4,000 et \$12,000. Afin de mesurer les effets de changements de prix sur le coût des biens et des services achetés par ces familles, l'indice des prix à la consommation suit les mouvements de quelque 300 articles.

L'histoire des indices de prix à la consommation au Canada remonte au début des années 1900, et elle comprend des révisions périodiques des périodes de référence de base de l'indice ainsi que des schémas de pondération. En janvier 1969, on a aligné la base de temps de 1949=100 à 1961=100; d'autres renseignements figurent dans l'édition de janvier 1969 de la publication mensuelle *Prix et indices des prix* (n° 62-002 au catalogue).

De mars 1961 à avril 1973 inclusivement, les poids, ou l'importance relative des éléments de l'indice des prix à la consommation étaient basés sur les tendances de dépense des familles pour 1957; on peut trouver le détail de ces poids dans la publication *The Consumer Price Index for Canada (1949=100) (Revision based on 1957 Expenditure)*, (n° 62-518 au catalogue). En mai 1973, on a introduit une nouvelle révision des poids afin de prendre en compte les tendances de consommation des familles en 1967 (et, dans l'élément aliments, les habitudes détaillées de dépense en 1969). Le détail complet du dernier schéma de pondération et d'autres renseignements fondamentaux sur l'indice des prix à la consommation figurent dans la publication hors série *L'indice des prix à la consommation du Canada (1961=100) (Révision fondée sur les dépenses de 1967)*, (n° 62-539 au catalogue).

The Consumer Price Index for Canada Reclassified by Goods and Services

A revised supplementary classification system, entitled "The Consumer Price Index Reclassified by Goods and Services", was introduced in May 1973 with the revision of the weighting pattern of the Consumer Price Index to reflect 1967 expenditures.

This supplementary classification introduces an improved framework for regrouping the items which comprise the Index. In it, all items in the C.P.I. have been reclassified into two major categories — goods and services — according to their most characteristic or dominant attribute. The goods component has been sub-divided into three categories: durable, semi-durable, and non-durable goods, according to expected average useful lifetime criteria. Services, on the other hand, have been sub-divided according to broad functional categories.

Historical series conforming to the revised classification system replace the previously published supplementary indexes and are available, with explanatory notes, for the period January 1961 to April 1973 inclusive, in *Retail Prices and Living Costs Service Bulletin*, Catalogue 62-005, Vol. 2 No. 7.

Consumer Price Indexes for Regional Cities (1961 = 100)

Consumer Price Indexes for Regional Cities are published monthly in this bulletin (Table 11). Except for their individual weighting systems, and the fact that they are based on fewer quotations, the regional city indexes are generally similar in concept and item coverage to the Consumer Price Index for Canada.

Prior to May 1973, the city indexes may have underestimated the degree of price movements occurring because the shelter component of the city indexes moved on the basis of changes in rents only, whereas changes in both rents and homeownership costs were, and continue to be, included in the Canada index. As a result of homeownership costs having increased more rapidly than rents, the housing and the all-items indexes for cities tended to underestimate somewhat the rates of price increase particularly over longer periods. From May 1973 forward, however, homeownership costs are included in the regional city consumer price indexes so that the Canada and the regional city indexes are consistent in terms of their content and treatment.

Each city index is designed to measure the influence of changes in retail prices taking place in the locality specified, upon the cost of a fixed basket of goods and services representing the level of consumption of a representative group of families in the particular area specified.

In using the city indexes, it should be remembered that they do not in any way indicate whether price levels are higher or lower in one city than in another. Rather, they measure, within each city, the percentage change in consumer prices from the base period to subsequent time periods.

L'indice des prix à la consommation au Canada reclassé par biens et services

Un système révisé de classification supplémentaire, intitulé "L'indice des prix à la consommation au Canada reclassé par biens et services", a été introduit en mai 1973 en même temps que la révision des schémas de pondération de l'indice des prix à la consommation afin de rendre compte des dépenses de 1967.

Cette classification supplémentaire regroupe dans un cadre amélioré les éléments de l'indice. En effet, tous les éléments de l'I.P.C. ont été reclassés dans deux grandes catégories, soit la catégorie des biens et celle des services, suivant leur caractère plus distinctif ou dominant. La catégorie des biens présente trois sous-catégories (biens durables, biens semi-durables, biens non durables) déterminées en fonction de la vie utile moyenne prévue. D'autre part, on a réparti les services suivant quelques grandes catégories fonctionnelles.

Les séries historiques conformes au système révisé de classification remplacent les indices supplémentaires publiés auparavant, et on peut les trouver, avec des notes explicatives, pour la période janvier 1961-avril 1973, dans la publication "Prix de détail et coût de la vie" - Bulletin de service, n° 62-005 catalogue, vol. 2 no 7.

Indices des prix de la consommation dans certaines agglomérations urbaines (1961 = 100)

Ces indices sont publiés tous les mois dans la présente publication (Tableau 11). A l'exception de leurs systèmes de pondération particuliers, et de ce qu'ils font appel à moins de quotations, ces indices sont en général semblables par leur concept et par les éléments qui les composent à l'indice des prix à la consommation au Canada.

Avant mai 1973, les indices des agglomérations ont sous-estimé le degré de changement des prix, parce que l'élément logement des indices des agglomérations ne variait qu'en fonction de l'évolution des loyers, tandis que l'indice pour le Canada comprenait et ne comprend toujours que les changements de loyers et les coûts de propriété. Comme les coûts de propriété ont augmenté plus vite que les loyers, les indices du logement l'ensemble pour les villes tendent à sous-estimer quelque peu le taux de croissance des prix, principalement sur des périodes prolongées. À partir de mai 1973, cependant, les coûts de propriété sont inclus dans les indices de prix à la consommation des agglomérations urbaines, de sorte que les indices pour le Canada et les agglomérations urbaines sont homogènes à la fois pour ce qui est de leur contenu et de leur traitement.

Chaque indice de ville est conçu de manière à mesurer l'effet des changements des prix de détail dans la ville en question sur les prix d'un panier constant de biens et de services représentant le niveau de consommation d'un groupe représentatif de familles dans cette ville.

Le lecteur devra toujours garder en mémoire que les indices n'indiquent en aucune façon si les prix sont plus élevés dans une ville que dans une autre. Ils mesurent plutôt dans chaque ville le taux de variation des prix à la consommation à partir de la période de base et des périodes subséquentes.

For comparisons of retail price differentials between cities, see Table 14 of this publication and the relevant explanatory notes.

Purchasing Power of the 1961 Consumer Dollar

As consumer prices rise, the sum of money required to purchase an unchanging or equivalent quantity and quality of goods and services increases, and the amount of these items that can be purchased with a fixed sum of money decreases. Conversely, as prices fall, the amount of goods and services that can be purchased with a fixed sum of money increases. Thus, rising prices are associated with declining purchasing power of money and falling prices are associated with increasing purchasing power.

The purchasing power of the consumer dollar, in other words, bears an inverse relationship to the movement of the Consumer Price Index. For example, by January 1973, compared with their average level in 1961, consumer prices as measured by the C.P.I. were 44.5% higher, so that an equivalent basket of goods and services which could be purchased for \$100.00 in 1961 would cost the consumer \$144.50 in January 1973. Each consumer dollar in January 1973, therefore, buys less than in 1961, and the amount of its reduced value can be expressed in terms of the inverse consumer price movement. Thus, in January 1973 the purchasing power of the 1961 consumer dollar declined to approximately 69 cents ($\$1.00 \times 100.0/144.5 = \0.69).

Users of the tabulation which shows the purchasing power of the 1961 consumer dollar at different points in time (Table 12) should note that, as in the case of the Consumer Price Index from which it is derived, it may not represent closely the experience of any one specific family within the large group to which the C.P.I. relates; nor should it be expected to reflect the experience of other population groups whose income, family size and place of residence are characteristically different. It should also be noted that, like the C.P.I., it is not directly affected by changes in income tax, unemployment insurance premiums and certain other security payments.

Measuring the Purchasing Power of Wages

Changing consumer price levels affect the amounts of consumer goods and services which a dollar will buy, and average wages, insofar as they are spent on such items will, of course, be affected in the same way. A wage measurement which takes the change of consumer prices into account, can be calculated by reducing actual average wages by the percentage rise in consumer price levels, or increasing them if the amount price levels fall. Wages thus adjusted may be used to indicate the comparative purchasing power of average earnings if consumer price levels and consumption patterns had remained constant. The following illustration shows how this kind of an adjustment can be made.

Suppose that a series of average weekly wages rises from \$80.00 in week A to \$100.00 in week B, and that in the same interval a consumer price index advances from 100 to 110.0. Because of the 10% rise in consumer prices, \$1.00 will not buy as much in week B as it would in week A. On the

Pour étudier les différences de prix de détail entre les villes, il faut consulter le tableau 14 de la présente publication et les notes explicatives qui l'accompagnent.

Pouvoir d'achat du dollar de consommation 1961

À mesure que les prix à la consommation montent, la somme nécessaire à l'achat d'une quantité et d'une qualité constantes ou équivalentes de biens et de services augmente, et la quantité de ces articles qui peut être achetée avec une somme d'argent fixe diminue. Inversement, à mesure que les prix baissent, la quantité de biens et de services qui peut être achetée avec une somme d'argent constante augmente. Ainsi, la hausse des prix est liée à la baisse du pouvoir d'achat de la monnaie, et la baisse des prix est liée à la hausse du pouvoir d'achat.

Le pouvoir d'achat du dollar de consommation, en d'autres termes, évolue en raison inverse du mouvement de l'indice des prix à la consommation. Ainsi, en janvier 1973, par rapport au niveau de 1961, les prix à la consommation mesurés par l'I.P.C. avaient progressé de 44.5%, de sorte qu'un panier équivalent de biens et de services qui coûtait \$100 à l'achat en 1961 aurait coûté \$144.50 en janvier 1973 au consommateur. Par conséquent, chaque dollar de consommation en janvier 1973 achète moins qu'en 1961, et l'on peut exprimer le montant de sa valeur réduite en fonction de l'inverse du mouvement des prix à la consommation. Ainsi, en janvier 1973, le pouvoir d'achat du dollar de consommation 1961 était tombé approximativement à 69 cents ($\$1.00 \times 100.0/144.5 = \0.69).

Les utilisateurs du tableau qui indique le pouvoir d'achat du dollar de consommation de 1961 à différentes périodes (tableau 12) doivent noter que, comme dans le cas de l'indice des prix à la consommation dont il a été tiré, il peut ne pas suivre de près le cas d'une famille en particulier faisant partie du grand groupe auquel se rapporte l'I.P.C., pas plus qu'il ne rend nécessairement compte des dépenses d'autres groupes de la population dont les revenus, la taille des familles et les lieux de résidence diffèrent sensiblement. Il faut également noter que, tout comme l'I.P.C., in n'est pas touché directement par les changements de l'impôt sur le revenu, les primes d'assurance-chômage et certains autres paiements d'assistance.

Mesure du pouvoir d'achat des salaires

Les changements du niveau des prix à la consommation affectent les quantités de biens et de services de consommation qu'un dollar peut acheter, et les salaires moyens, dans la mesure où ils sont consacrés à de tels articles, seront naturellement touchés de la même façon. Une mesure des salaires qui prendrait en compte les changements de prix à la consommation peut se calculer en réduisant les salaires moyens réels du taux d'accroissement des prix à la consommation, ou en les augmentant dans une proportion égale à la baisse des prix. Les salaires ainsi ajustés peuvent servir à indiquer le pouvoir d'achat comparatif des gains moyens si les prix à la consommation et les tendances de consommation étaient restés constants. L'exemple suivant montre comment on peut procéder à un ajustement de cette nature.

Supposons qu'une série de salaires hebdomadaires moyens passe de \$80 pendant la semaine A à \$100 au cours de la semaine B, et qu'au cours de la même période un indice des prix à la consommation passe de 100 à 110. Par suite de la hausse de 10% des prix à la consommation, \$1 n'achètera pas autant au cours de

other hand, the 25% rise from \$80.00 to \$100.00 will overstate the increase which has occurred in the purchasing power of average weekly wages. This overstatement can be removed by reducing the figure of \$100.00 by the amount of the consumer price index increase. The adjusted average is $\$90.91 ((100.0/110.0) \times \$100)$, which may be referred to as a weekly wage average for week B expressed in the dollars of period A; or it may be said to indicate the level of real weekly wages relative to week A.

The foregoing calculation can be carried a step further to express, in index number form, the relationship between the week A average of \$80.00 and the week B adjusted figure of \$90.91. Assuming the week A average of \$80.00 as an index equal to 100, the week B index becomes 113.6 $((90.91/80.00) \times 100)$. Such an index may be called an index of average weekly real wages. It indicates that average wages for week B will buy 13.6% more goods and services than they did in week A, in spite of a 10% rise in consumer prices. This 13.6% increase in real wages compares with the 25% rise in money wages $((\$100.00 - \$80.00 / \$80.00) \times 100)$.

In Table 13, the index numbers of average weekly wages in manufacturing in current dollar terms (1961 = 100) are calculated by dividing the weekly wages in current dollars by the 1961 average weekly wage in current dollars and multiplying the result by one hundred. For example, the weekly wage index for September 1972 in current dollars (1961 = 100) is 196.4 $((146.23/74.45) \times 100)$. The weekly wages in 1961 dollar terms are determined by dividing the weekly wage in current dollars by the consumer price index for Canada for the month following the month to which the wages relate and multiplying the result by one hundred. Thus, the September 1972 weekly wage in 1961 dollars is \$102.98 $((146.23/142.0) \times 100)$. (The wage and the price data both refer to generally similar time periods: current wages for a particular month relate to the last pay periods in that month, while most prices for the consumer price index of the following month are collected in the first week of that month.)

The index numbers of weekly wages in 1961 dollar terms (1961 = 100) are determined by dividing the weekly wages in 1961 dollars by the base (1961) average weekly wage and multiplying the result by one hundred. For example, the September 1972 weekly wage index in 1961 dollar terms (1961 = 100) is 138.3 $((102.98/74.45) \times 100)$.

It should be noted that while the estimates of average real wages may reflect the experiences of broad groups of workers in manufacturing fairly well, their applicability to individual wage-earners depends upon a number of considerations. For example, individual earnings will differ significantly from the group average, depending upon occupation, industry, geographical location, or sex of the wage-earner. Moreover, individual spending habits differ widely, but the consumer price index which is used to adjust the earnings data refers only to the average consumption pattern of a particular population group. Group spending patterns change over periods of time. To the extent that this occurs, the wage data adjusted by the consumer price index (which has a "fixed" consumption pattern), will gradually be ren-

la semaine B qu'au cours de la semaine A. Par contre, la hausse de 25% (de \$80 à \$100) va surévaluer la hausse qui s'est produite dans le pouvoir d'achat des salaires hebdomadaires moyens. Ce surévaluation peut être réduite en réduisant le chiffre de \$100.00 au montant de l'accroissement de l'indice des prix à la consommation. La moyenne ajustée sera \$90.91 $((100.0/110.0) \times 100)$, que l'on peut désigner comme étant la moyenne du salaire hebdomadaire pour la semaine B exprimée en dollars de la période A; on peut aussi dire qu'elle indique le niveau réel des salaires par rapport à la semaine A.

On peut pousser ce calcul plus loin, en exprimant à l'aide d'un indice, la relation entre le salaire moyen de \$80 de la semaine A, et le salaire révisé de \$90.91 de la semaine B. En supposant que la moyenne de la semaine A soit un indice égal à 100, l'indice de la semaine B devient 113.6 $((90.91/80.00) \times 100)$. On peut appeler un tel indice l'indice de la rémunération hebdomadaire effective. Il indique que le salaire moyen pour la semaine B permettra aux consommateurs d'acheter pour 13.6% de plus de biens et services que pendant la semaine A, et ceci, en dépit de l'augmentation de 10% des prix à la consommation. Cette augmentation effective de 13.6% se compare à l'augmentation de 25% des salaires $((\$100.00 - \$80.00 / \$80.00) \times 100)$.

Au Tableau 13, les nombres indices des salaires hebdomadaires moyens dans les industries manufacturières en dollars courants (1961 = 100) s'obtiennent en divisant les salaires hebdomadaires en dollars courants par le salaire hebdomadaire moyen de 1961 en dollars courants et en multipliant le résultat par cent. Ainsi, l'indice des salaires hebdomadaires pour septembre 1972 exprimés en dollars courants (1961 = 100) est 196.4 $((146.23/74.45) \times 100)$. Les salaires hebdomadaires en dollars de 1961 s'obtiennent en divisant les salaires hebdomadaires en dollars courants par l'indice des prix à la consommation pour le Canada pour le mois qui suit celui auquel se rapportent les salaires, et en multipliant le quotient par cent. Ainsi, le salaire hebdomadaire de septembre 1972 exprimé en dollars de 1961 est \$102.98 $((146.23/142.0) \times 100)$. (Les données sur les salaires et les prix portent en général sur des périodes semblables: les salaires courants d'un mois donné sont généralement ceux des dernières périodes de paie du mois, alors que la plupart des prix de l'indice des prix à la consommation du mois suivant sont recueillis au cours de la première semaine de ce mois.)

Les nombres indices des salaires hebdomadaires en dollars de 1961 (1961 = 100) s'obtiennent en divisant les salaires hebdomadaires en dollars de 1961 par les salaires hebdomadaires moyens de l'année de base (1961) et en multipliant le quotient par cent. Ainsi, l'indice des salaires hebdomadaires pour septembre 1972, exprimés en dollars de 1961 (1961 = 100), sera 138.3 $((102.98/74.45) \times 100)$.

Il convient de souligner que, même si les estimations des salaires réels moyens résument assez bien la situation d'un large éventail de travailleurs dans les industries manufacturières, elles ne peuvent être appliquées aux individus sans quelques précautions. Ainsi, le revenu d'un salarié s'écartera sensiblement de la moyenne du groupe en fonction de sa profession, de l'industrie dans laquelle il travaille, de sa situation géographique ou de son sexe. De plus, les habitudes de consommation varient considérablement d'un individu à l'autre, alors que l'indice des prix à la consommation qui sert à redresser les données sur les gains personnels est déterminé par la structure moyenne de consommation du groupe déterminé. De même, les habitudes de consommation changent avec le temps. Ainsi, les données sur les gains rajustées par l'indice des prix à la consommation (les habitudes de consommation)

dered less valid; the consumer price index weighting pattern was last revised in May 1973, and prior to that, in 1961. Furthermore, some part of income may be saved, and it should be borne in mind that it is not appropriate to reduce savings to a constant dollar basis by using an index which reflects consumption patterns.

It should also be kept in mind that measures of change in real earnings calculated from averages of gross earnings may differ from changes in the purchasing power of "take-home" pay, due to such factors as changes in personal income tax and pay deductions for such things as social insurance and pension plans. Thus index numbers of real wages should not be interpreted as measuring fluctuations in the levels of consumption of wage-earners or wage-earners' families; they are intended to show only the trend in purchasing power of wages over the items covered by the price index, and in addition to the factors already mentioned, do not take into account other family income (including family allowances) or changes in the savings position of families.

The table in this report showing indexes of both actual (current dollar) and real (constant dollar) wages uses 1961 as a reference year. However, any reference period may be chosen as a base since percentage changes between any two periods will be the same regardless of the reference period selected.

Further information regarding Table 13 can be obtained from: Labour Division, Statistics Canada.

Inter-City Retail Price Comparisons

Statistics relating to differences in retail prices between Canadian cities were initially developed for food, and subsequently extended to cover such other elements of the family budget as clothing, transportation, household operation, health and personal care, recreation, education and reading, and tobacco and alcohol. In all, inter-city price comparisons are drawn for commodities and services comprising nearly three-quarters of the budget on which the Consumer Price Index for Canada is currently based with the major omission being shelter (both rented and owned). While recognizing the importance of shelter differentials in any overall comparison of the general price level being encountered by consumers in different urban centres, the problems inherent in drawing valid comparisons between cities are such as to require further research. Meanwhile, it is considered that, despite the absence of shelter differentials at this time, publication of retail price comparisons for other elements of the budget will go some distance towards serving the varied needs of users.

Table 14 presents the results of an updating of earlier retail price measurements to May 1971 and includes more complete data on several cities. A fuller explanation of the study from which this table is derived is contained in the November 1968, November 1969 and April 1972 issues of *Prices and Price Indexes* (Statistics Canada, Catalogue 62-002).

mation étant supposées "fixes") perdront graduellement de leur valeur; le schéma de pondération de l'indice des prix à la consommation a été révisé pour la dernière fois en mai 1973, et avant cela, en 1961. De plus, il ne faut pas oublier qu'une partie du revenu peut être épargnée et qu'il serait faux de recalculer cette épargne en dollars constants à partir d'un indice qui se rapporte à des habitudes de consommation.

De même, il faut se rappeler que l'évaluation des variations des gains effectifs calculées à partir de moyennes effectives peut différer de l'évaluation des variations du pouvoir d'achat du revenu disponible en raison de facteurs tels que l'évolution de l'impôt sur le revenu des particuliers et des retenues destinées à l'assurance sociale, aux régimes de pensions, etc. Ainsi, l'indice de la rémunération effective ne sert pas à mesurer les variations des niveaux de consommation des salariés ou de leurs familles, mais plutôt à montrer les tendances du pouvoir d'achat des salariés par rapport aux articles contenus dans l'indice; enfin, l'indice ne prend pas en compte les autres revenus des familles (tels que les allocations familiales) ou les variations de l'épargne des familles.

La période de référence du tableau qui présente les salaires tant réels (en dollars courants) qu'effectifs (en dollars constants) prend pour base l'année 1961. En fait, on peut choisir n'importe quelle période de référence comme base, puisque les taux de variation entre deux périodes seront les mêmes quelle que soit la période de référence choisie.

On peut obtenir plus de renseignements sur le tableau 13 en s'adressant à la Division du travail, Statistique Canada.

Comparaisons entre les prix de détail d'une ville à l'autre

À l'origine, la statistique des différences entre les prix de détail d'une ville du Canada à l'autre a été mise au point pour l'alimentation; par la suite, on l'a étendue à d'autres postes du budget familial tels que l'habillement, les transports, l'entretien du ménage, la santé et les soins personnels, les loisirs, la formation et la lecture, et le tabac et l'alcool. Au total, les comparaisons d'une ville à l'autre portent sur des biens et des services constituant près des trois quarts du budget servant actuellement à construire l'indice des prix à la consommation au Canada, la seule grande omission étant le logement (location et frais de possession). Sans vouloir nier l'importance des différences en ce qui concerne le logement dans toute comparaison globale du niveau général des prix auxquels les consommateurs doivent faire face dans divers centres urbains, il faut bien dire que les problèmes que comporteraient l'établissement d'une comparaison valable d'une ville à l'autre sont tels qu'ils nécessitent plus de recherche. Entre-temps, on estime que malgré l'absence actuelle de données sur les dépenses de logement, la publication de comparaisons des prix de détail pour d'autres postes du budget permettra de faire de gros progrès en ce qui concerne la satisfaction des besoins variés des utilisateurs.

On trouvera au tableau 14 le résultat d'une mise à jour de mesures de prix de détail tirées précédemment jusqu'à mai 1971, ainsi que des données plus complètes sur plusieurs villes. Une explication plus détaillée de l'étude dont le tableau en question est tiré figure dans les livraisons de novembre 1968, novembre 1969, et avril 1972 de *Prix et indices des prix* (n^o 62-002 au catalogue).

The original data base of this study was the wide range of retail price quotations collected in the course of production of the national and urban Consumer Price Indexes. In developing these spatial price comparisons, efforts were made to achieve comparability by equating qualities of goods and services and by matching types of retail outlets, as far as possible. Price relationships between pairs of cities were derived and subsequently converted to a common base of Winnipeg prices equalling 100 to facilitate comparisons over the whole range of cities. Except for foodstuffs and new passenger cars for which inter-city price differentials were derived directly from new comparisons based on May 1971 price data, the updating of these measurements of inter-city retail price differentials was accomplished by application of the relative movement of prices, at the item level in each city, over the intervening periods as derived from the relevant city consumer price indexes. These price relationships at the item level were aggregated on the basis of the Canada urban consumer spending pattern, rather than the patterns applicable to individual cities. While differences in spending patterns exist among cities, the magnitude of these differences in the cities covered is not such as to affect most of the spatial comparisons significantly. Because of the previously mentioned absence of shelter price relationships, which may be of considerable significance in any overall comparison of inter-urban retail price differentials, aggregative indexes beyond major budget groupings are not shown.

The weighting factors used to combine items to group and component levels in Table 14 are based on 1957 expenditures, and therefore will not be identical to the 1967 weights, introduced in May 1973, in Consumer Price Index tables.

It should be noted that the retail prices used in this comparison, being those faced by consumers, include sales and excise taxes as applicable. Variations between provinces in the scale of sales taxes imposed on a wide range of non-food commodities can be of significance in explaining inter-city price differentials for these items.

While these indexes have been expressed in terms of Winnipeg = 100, the selection of Winnipeg as the base city has no special significance, and the indexes may be expressed on the base of any of the individual cities included.

Farm Input Price Indexes (1961 = 100)

Farm Input Price Indexes measure, through time, changes in prices of commodities and services used in Canadian farming operations. The item content and weights are based on data from the 1958 Farm Income and Expenditure Survey, the most recent source of sufficiently detailed data. These data have been modified to reflect 1961 prices and conditions. Farm Input Price Indexes are calculated quarterly for Eastern, Western and all Canada on a 1961 = 100 time base.

Les premières données de base pour la présente étude ont été constituées par l'importante collection de prix de détail recueillie lors de la confection des indices nationaux et urbains de prix à la consommation. Au moment d'établir ces comparaisons géographiques de prix, on s'est efforcé d'assurer la comparabilité en prenant des biens et des services de qualité égale et d'assortissant autant que possible les points de vente au détail par type. Les relations de prix entre paires de villes ont été calculées puis converties à la base commune des prix de Winnipeg = 100 afin de faciliter des comparaisons pour l'ensemble de toutes les villes. Sauf pour les denrées alimentaires et les voitures neuves pour lesquelles les différences de prix entre villes ont été tirées directement de nouvelles comparaisons fondées sur les données de mai 1971, la mise à jour de ces mesures des différences de prix au détail entre les villes a été assurée grâce à l'extension des mouvements relatifs de prix au niveau de chaque article dans chaque ville aux périodes observées selon le calcul établi à partir de l'indice de prix à la consommation pour la ville en question. Ces relations entre les prix au niveau de l'article ont été agrégées sur la base des habitudes de consommation du citoyen pour l'ensemble du Canada et non pas selon les habitudes de dépense applicables à des villes individuelles. Même s'il existe des différences dans les habitudes de dépense d'une ville à l'autre, l'importance de ces différences en ce qui concerne les villes dont il est question ici sont pas suffisantes pour influencer sensiblement sur la plupart des comparaisons géographiques. Du fait de l'absence des relations de prix en ce qui concerne le logement, dont il a déjà été question ci-dessus et qui pourrait avoir une importance considérable chaque fois que l'on voudrait tirer une comparaison globale entre les différences de prix à la consommation au détail d'une ville à l'autre, on ne trouvera ici aucun indice synthétique agrégé au-dessus des principales composantes du budget.

Les facteurs de pondérations utilisés pour regrouper les articles en groupes et en éléments dans le Tableau 14 sont basés sur les dépenses de 1957; ils ne sont donc pas identiques aux pondérations de 1967 adoptées en mai 1973 dans les tableaux relatifs à l'indice des prix à la consommation.

Il faut remarquer que les prix de détail ayant servi à la présente comparaison sont ceux que doit payer le consommateur et comprennent donc les taxes de vente et les taxes d'accises qui peuvent s'appliquer. Les différences d'une province à l'autre en les barèmes de taxe de vente imposés sur une grande variété de biens non alimentaires peut avoir une grande importance pour expliquer les différences de prix d'une ville à l'autre pour les articles en question.

Le fait que ces indices aient été exprimés en prenant Winnipeg = 100 ne signifie pas que le choix de Winnipeg comme ville de référence ait une signification particulière et les indices pourraient être exprimés sur la base de n'importe laquelle des villes qui y figurent.

Indices de prix des entrées dans l'agriculture (1961 = 100)

Les indices de prix des entrées dans l'agriculture mesurent l'évolution dans le temps du prix des produits et des services utilisés dans l'exploitation agricole au Canada. Les articles qui sont compris, ainsi que leurs poids, sont fondés sur l'enquête de 1958 sur les revenus et les dépenses des agriculteurs, qui constitue la source la plus récente dont les données soient suffisamment détaillées. Ces données ont été adaptées de manière à rendre compte des prix et des conditions constatées pour 1961. Les indices des prix des entrées dans l'agriculture sont calculés chaque trimestre pour l'Est, l'Ouest et l'ensemble du Canada sur la base 1961 = 100.

Farm Input Price Indexes replace one of the two major component indexes of the previously published series, Price Index Numbers of Commodities and Services Used by Farmers, 1935-39 = 100. The latter index was composed of a Farm Family Living Index and a Composite Index Exclusive of Living Component. The Farm Input Price Indexes replaces the Composite Index Exclusive of Living Component from 1961 forward.

A detailed description of concepts, methods and data sources is contained in the occasional paper, *Farm Input Price Indexes, 1961 = 100*, Catalogue No. 62-534, and is reproduced in the September 1971 issue of *Prices and Price Indexes*, Catalogue 62-002. The foregoing publications also contain total and component price indexes for Eastern, Western, and all Canada, from 1961 to and including the third quarter 1971.

Current price indexes will be published on a regular basis in the quarterly publication, *Farm Input Price Indexes, 1961 = 100*, Catalogue 62-004, and in the monthly publication *Prices and Price Indexes*, Catalogue 62-002.

The Farm Family Living component of the 1935-39 series has not been replaced by an updated counterpart, and publication has been suspended.

Security Price Indexes

Security price indexes measure through time the effect of price change on the value of a portfolio of stocks bought and held by a hypothetical investor (as opposed to the more speculative trader). The portfolio represents stocks of Canadian companies listed on Toronto and Montreal stock exchanges.

The number of shares held for each issue is in proportion to the total number of shares outstanding. Prices in the investor's mining and supplementary stock indexes are Thursday's closing quotations from the exchange (Montreal, Toronto, Vancouver or Calgary) with the highest volume for a particular stock, as reported in the Daily Canadian Data Bank of the Financial Post Computer Services Department. For preferred stocks, prices are monthly weighted averages of the daily closing price in which weights are daily total volume. The price reference base for the indexes is the year 1956, and the indexes express prices as a percentage of price 1956, arithmetically converted to the 1961 = 100 base.

Revised indexes on the base 1956 = 100 were first presented in the June 1962 issue of this publication. The most important change in the revision of the indexes, apart from the shift in the price reference base, was the classification of stocks according to the Standard Industrial Classification. In the continuing major group Industrials, 4 sub-groups (Milling and Grains, Food and Allied Products, Machinery and Equipment, and Building Materials) were replaced by 8 new sub-groups (Foods, Printing and Publishing, Primary Metals, Metal Fabricating, Non-metallic Minerals, Chemicals, Construction and Retail Trade). The remaining 5 sub-groups of the former index, viz., Industrial Mines, Beverages, Textile and Clothing, Pulp and Paper, and Oils (renamed Petroleum) were continued. The major group utilities was contin-

Les indices des prix des entrées dans l'agriculture remplacent l'un des deux principaux éléments d'indices de la série précédente sur l'indice de prix des produits et services utilisés par les agriculteurs, (1935-39 = 100). Cet indice comprenait l'indice du coût de la vie pour les familles agricoles et l'indice synthétique sans le coût de la vie. Les indices des prix des entrées dans l'agriculture remplacent l'indice synthétique sans le coût de la vie à partir de 1961.

Le bulletin hors série *Farm Input Price Indexes, 1961 = 100* (no 62-534 au catalogue) contient une description détaillée des concepts, des méthodes et des sources de données qui est reprise dans *Prices and Price Indexes* de septembre 1971 (n° 62-002 au catalogue). Ces deux bulletins contiennent également les indices des prix totaux et partiels pour l'Est et l'Ouest du Canada et pour l'ensemble du Canada, de 1961 au troisième trimestre de 1971 inclusivement.

Les indices des prix en cours seront publiés régulièrement dans le bulletin trimestriel *Farm Input Price Indexes, 1961 = 100* (n° 62-004) et dans le bulletin annuel *Prices and Price Indexes* (n° 62-002).

On n'a pas remplacé l'indice du coût de la vie pour la famille agricole des séries de 1935-39 par un équivalent à jour et on a cessé de la publier.

Indices des cours des valeurs mobilières

Les indices des cours des valeurs mobilières mesurent dans le temps l'incidence du mouvement des prix sur la valeur d'un portefeuille de titres achetés et détenus par un actionnaire hypothétique (par opposition au spéculateur). Le portefeuille comprend des actions de sociétés canadiennes cotées à la Bourse de Toronto et de Montréal.

Le nombre d'actions détenues pour chaque émission est proportionnel au nombre total d'actions en circulation. Les indices des prix des titres miniers et les indices supplémentaires sont les cours de fermeture de jeudi (Montréal, Toronto, Vancouver et Calgary) affichant le volume le plus élevé pour une valeur en particulier, d'après la Banque des données canadiennes quotidiennes du Service de l'informatique du *Financial Post*. Pour les actions privilégiées, les prix sont les moyennes pondérées mensuelles des cours de clôture de chaque jour et les poids, le volume quotidien total. La période de référence pour les indices est l'année 1956 et les indices représentent les prix exprimés en pourcentage des prix de 1956 recalculé sur la base 1961 = 100.

Les indices révisés sur la base 1956 = 100 ont été publiés pour la première fois dans la livraison de juin 1962 de cette publication. La modification la plus importante à la révision de l'indice, à part le changement de la période de référence, a été le classement des actions d'après la Classification des activités économiques. Dans le cas du grand groupe des valeurs industrielles, 4 sous-groupes (minoterie et céréales, aliments et produits connexes, machines et matériel et matériaux de construction) ont été remplacés par 8 nouveaux sous-groupes (aliments, imprimerie et édition, métaux primaires, produits métalliques, minéraux non métalliques, produits chimiques, construction et commerce de détail). On a conservé les 5 autres sous-groupes de l'ancien indice: mines industrielles, boissons, textiles et habillement, pâte et papiers, et huiles (sous la désignation de pétrole). Le grand groupe

ued but the Pipelines index was added as a sub-group and the previous Power and Traction sub-group was replaced by two new sub-groups, viz., Electric Power and Gas Distribution. A major group Finance was composed of the former major group Banks and the former supplementary index Investment and Loan. Constant weights which were previously limited to major groups, were extended to sub-groups. Weights in the index continue to be based on shares outstanding.

A revision of the Security Price Indexes to the 1971 = 100 base is under development.

For the list of stocks currently included in the Investors Index and Preferred Index, see *Prices and Price Indexes* for March 1974.

Residential and Non-Residential Building Construction Price Indexes

The fixed-weighted input price indexes of materials and wage rates for residential and non-residential building construction are being published here for the convenience of users (Table 20). A more complete description of the characteristics of the indexes appeared in the May 1970 issue of *Prices and Price Indexes*, and this explanation is available on request from the Prices Division, as is historical monthly data for the series.

Because the indexes measure the impact of price change on the materials and labour inputs to construction, and not the effects of changes in profit margins or productivity, there is thought to be an upward bias in these indexes as indicators of price change for the output of building construction, or buildings in place. Users are therefore warned to exercise caution in making use of the series, for this purpose. A comparison of these series with the implicit price deflators (1) providing an estimate of price change for the output of the industry, derived from the measurement of gross fixed capital formation in constant dollars, will provide some insight into the effects on the price movement of adjusting the fixed-weighted input indexes for changes in productivity and profit margins.

During the period from 1926-1966 a special sample or respondents supplied materials prices for the index. As of 1961 this sample has been replaced with prices from the ISPI system (2). The latter are published monthly in table 2 of this publication.

The Construction wage rate series is based on wage rate material supplied by the Labour Standards Branch, Dept. of Labour, and relates to minimum wages paid on government contracts for construction in a variety of trades and cities.

(1) Gross National Product Division, Statistics Canada.

(2) *Industry Selling Price Indexes 1956-1968* Catalogue 62-528.

de services d'utilité publique a été conservé mais l'indice de pipelines a été ajouté comme sous-groupe et l'ancien sous-groupe d'énergie et traction a été remplacé par deux nouveaux sous-groupes: l'énergie électrique et la distribution du gaz. Le nouveau grand groupe "Finances" est composé de l'ancien grand groupe banques et de l'ancien indice supplémentaire investissements prêts. Les facteurs constants de pondération qui étaient autrefois limités aux grands groupes s'appliquent maintenant aux sous-groupes. Les facteurs de pondération de l'indice continuent à être basés sur les actions en circulation.

On prépare actuellement une révision des Indices des constructions des valeurs mobilières sur la base 1971 = 100.

La liste des titres repris actuellement dans les indices des valeurs de placements et dans les indices des valeurs privilégiées se trouve dans *Prix et indices des prix* de Mars 1974.

Indices des prix de la construction résidentielle et non résidentielle

Les indices à pondération fixe des prix des entrées de matériaux et de salaires dans la construction résidentielle et non résidentielle sont publiés ici pour faciliter la tâche aux utilisateurs (Tableau 20). On trouvera une description plus détaillée des caractéristiques des indices dans *Prices and Price Indexes* de mai 1970. On peut s'en procurer un exemplaire ainsi que les données mensuelles chronologiques sur cette série en s'adressant à la Division des prix.

Comme les indices mesurent l'influence des variations de prix sur les entrées de matériaux et de main-d'oeuvre du bâtiment plutôt que les répercussions des variations de marges bénéficiaires ou de productivité, on les croit surestimés en tant qu'indicateurs des variations de prix de la construction, ou des bâtiments construits. Les utilisateurs devront donc faire preuve de discernement quand ils se serviront des séries à cette fin. Si l'on compare ces séries avec les facteurs de dégonflement (1) des prix implicites (qui donnent une estimation de la variation du prix pour la production de l'industrie), obtenus en mesurant la formation brute de capital fixe en dollars constants, on aura un aperçu des effets de l'ajustement sur l'évolution des prix des indices à pondération fixe des entrées pour tenir compte des variations de productivité et des marges bénéficiaires.

Au cours de la période 1926-1966, un échantillon spécial d'enquêtés a donné les prix pour l'indice. En 1961, on a remplacé cet échantillon par les prix tirés du système I.P.V.I. (2). Ces prix sont publiés par mois dans le tableau 2 du présent bulletin.

La série consacrée au taux de rémunération dans l'industrie du bâtiment est basée sur les chiffres fournis par la Direction des normes du travail du ministère du Travail; elle a trait au salaire minimum versé aux termes de marchés signés avec le gouvernement pour des travaux de construction dans divers comtés de métiers et dans diverses villes.

(1) Division du produit national brut, Statistique Canada.

(2) *Indices des prix de vente dans l'industrie, 1956-1968*, Catalogue 62-528 au catalogue).

Users are reminded that the indexes were arithmetically rebased to the year 1961 = 100 and therefore combining the components with the weights as shown will not provide the composite index provided. Users able to provide their own weights for the components can recombine the components to suit their particular needs.

Basic Union Wage Rate Indexes for Major Construction Trades

Basic union wage rate indexes are prepared for 12 major construction trades in each of 14 cities in Canada. Weighted average city indexes are prepared as well as a 14 city composite. Indexes are released quarterly in summary form in Tables 21 and 22 of Prices and Price Indexes (Catalogue 62-002). This index is found in table 20 of Prices and Price Indexes (Catalogue 62-002). Full trade detail, by city, is published quarterly in the Construction Price Statistics Service Bulletin, (Catalogue 62-006).

Rates utilized in index calculations are derived mainly from the *Construction Collective Agreement Survey Service* provided by the Canadian Construction Association. These rates are supplemented as necessary by surveys of some union locals. While indexes containing supplementary benefits will be available soon, presently published indexes relate to basic union wage rates only. The rates indicate the rate of straight time compensation for one hour in the city specified. Rates converted into the form of ratios were combined into weighted average city indexes utilizing 1961 Census of population data on numbers of people employed by trade and average earnings in the construction industry.

The base-weighted indexes provide an estimate of the impact of rate change on basic union wages for the major construction trades employed in a given city. Because union workers in cities tend to be engaged mainly in non-residential commercial building construction and because rates for trades associated with engineering work were excluded from the price sample the indexes best approximate wage rate change for non-residential construction.

Highway Construction Price Indexes (1961 = 100) (3)

The Price Indexes of Highway Construction in Canada express prices paid by provincial governments in contracts awarded for highway construction each year, as a percentage of prices paid in 1961. The arithmetic conversion of the indexes to a 1961 time base does not change their percentage movements as compared to the previously published indexes to a 1956 = 100 time base. Users are warned that an aggregation of the converted major group indexes with the published weights will not yield the published 1961 = 100 all items indexes. The conversion does not create a problem for a user wishing to reweight the converted major group indexes using weights appropriate to this own purpose.

The years refer to fiscal years. Thus 1968 refers to the period April 1, 1968 to March 31, 1969.

Nous rappelons aux utilisateurs que les indices ont été recalculés sur la base 1961 = 100 et qu'ils n'obtiendront pas l'indice synthétique fourni en combinant les éléments et les pondérations donnés. Les utilisateurs qui sont à même de fournir leur propre pondération pour les éléments peuvent procéder à leur propre combinaison adaptée à leurs besoins spécifiques.

Indices du salaire syndical de base dans les principaux corps de métiers

Les indices du salaire syndical de base portent sur les 12 principaux métiers de la construction dans 14 grandes villes canadiennes. On calcule les indices pondérés moyens pour chaque ville de même que l'indice synthétique des 14 villes. Les indices sont publiés chaque trimestre dans les Tableaux 21 et 22 de la publication *Prix et indices des prix* (n° 62-002 au catalogue). On peut trouver cet indice dans le tableau 20 de la publication *Prix et indices des prix* (no 62-002 au catalogue). Des données détaillées sur tous les métiers de la construction dans chaque ville sont publiés chaque trimestre dans le bulletin de service *Statistique des prix dans la construction* (n° 62-006 au catalogue).

Les taux utilisés dans le calcul des indices proviennent principalement de la publication *Construction Collective Agreement Survey Service* de l'Association canadienne de la construction. Des enquêtes auprès de certaines succursales de syndicats ont été menées lorsqu'il fallait disposer de taux supplémentaires. On publiera sous peu des indices contenant les avantages supplémentaires, mais les indices actuels portent uniquement sur le salaire syndical de base. Les taux correspondent à la rémunération normale pour une heure dans la ville en question. Les taux convertis en ratios ont été transformés en indices pondérés moyens des villes à partir des données tirées du recensement de la population de 1961 sur les effectifs de chaque métier et les gains moyens dans l'industrie de la construction.

Les indices pondérés permettent d'évaluer l'influence de la variation du taux des salaires syndicaux pour les principaux métiers de la construction dans une ville donnée. Étant donné que les travailleurs syndiqués dans les villes s'occupent surtout de la construction non résidentielle, ou commerciale, et que les taux des métiers relevant du génie civil n'ont pas été inclus dans l'échantillon des prix, les indices constituent la meilleure approximation des variations dans les taux de salaire dans la construction non résidentielle.

Indices des prix de la construction routière (1961 = 100) (3)

Les indices des prix de la construction routière au Canada représentent les prix payés chaque année par les administrations provinciales au titre des marchés de construction routière, en pourcentages des sommes payées en 1961. La conversion des indices à la base 1961 = 100 ne modifie pas leur évolution en pourcentages comparativement aux indices publiés précédemment et dont la base était 1956 = 100. Les utilisateurs ne doivent pas s'attendre à ce que le groupement des indices convertis des grands groupes et des pondérations publiées donne l'indice général publié (1961 = 100). Cette conversion ne pose aucun problème à l'utilisateur qui désire réviser la pondération des indices convertis des grands groupes en utilisant les poids adaptés à ses fins propres.

(3) Il s'agit d'exercices financiers. 1968 représente donc la période de 1er avril 1968 au 31 mars 1969.

Base-weighted indexes are published annually and measure, for the period 1956 to 1968, the effect of price change on the cost of specific programmes of highway construction in Canada represented by highway construction contracts of approximately \$50,000 or more awarded by specified provincial governments during the weight-base period. Weights of items in the index, representing the relative importance of units of construction in the year 1956 are held constant. Only the estimates of prices change from year to year, and the indexes thus measure the movement of prices through time. For a more complete statement of the problem of estimating price change for highway construction see pages vi & vii of the December 1967 issue of *Prices and Price Indexes*, Catalogue 62-002 and pages 9 & 10 of the reference paper *Price Indexes of Highway Construction* in Catalogue 62-520. The all-items index or its components are useful for planning and budgeting for highway construction programmes, in escalating or updating previously costed roadwork, in estimating replacement cost of previously completed roadwork, and as historical measurements of price trends in highway construction.

The indexes do not necessarily reflect the price movements of non-contract construction or maintenance work. The indexes are designed to measure price changes for a fixed programme of highway construction, in each of the seven provinces. Because price levels in the time base-period (1961) varied from province to province the indexes cannot be used to compare price differences between provinces, but only to compare differences in the rate at which prices are changing in the provinces.

Prices contained in the index are not for units of labour and materials as is usually the case in construction price indexes but rather for units of construction work put in place such as an acre of clearing, a cubic yard of earth excavation or a ton of bituminous hot-mix paving. In addition, the index contains prices of some materials, such as culvert pipe, usually supplied to the contractor by the highway departments. Prices of highway construction work are annual weighted averages of bid prices of units of construction in groups of contracts awarded, classified by price-determining characteristics of the contracts and the bid items such as volume of the bid item, type of contract and geographic location. Prices of material items of supply are prices paid by government departments to suppliers.

Price Indexes of Electric Utility Construction

In electric utility terms, the index is designed to provide an estimate of the impact of price change on the cost of materials, labour and equipment used in constructing and equipping electric utilities in a specified base period. The index provides an estimate of how much more, or less it would cost to reproduce the base-period programme of construction in another period, using the same construction technology as in the base period and assuming rates of profit and productivity in construction are the same in both periods.

Les indices pondérés en fonction de la base sont publiés chaque année; ils mesurent, pour la période allant de 1956 à 1968, l'influence de l'évolution des prix sur le coût des programmes spécifiques de construction de routes au Canada représentés par des marchés de construction de routes d'environ \$50,000 ou plus accordés par certaines administrations provinciales au cours de la période visée par la base de pondération. Les poids des éléments des indices qui représentent l'importance relative des unités de construction en 1956 sont constants. Seules les estimations des prix varient d'une année à l'autre; les indices mesurent donc l'évolution des prix dans le temps. Pour plus de détails sur l'estimation de l'évolution des prix pour la construction routière, se reporter aux pages vi et vii du numéro de décembre de *Prices and Price Indexes* (n° 62-002 au catalogue de Statistique Canada) et aux pages 9 et 10 du bulletin intitulé *Price Indexes of Highway Construction Canada* (no 62-520 au catalogue de Statistique Canada). L'index général ou ses éléments servent à la planification et à la budgétisation des programmes de construction routière, à indexer ou à mettre à jour les prix de travaux de routes effectués précédemment, à estimer le coût de remplacement des travaux routiers achevés précédemment et à mesurer chronologiquement l'évolution des prix de la construction routière.

Les indices ne reflètent pas nécessairement l'évolution des prix de la construction effectués hors marché ou des travaux d'entretien; ils servent à mesurer les variations de prix pour un programme déterminé de construction routière dans chacune des sept provinces. Au cours de la période qui a servi de base (1961) les niveaux de prix ont varié d'une province à l'autre; aussi, on ne peut utiliser les indices pour comparer des différences de prix entre les provinces mais on peut seulement les employer pour comparer les différences entre taux de variation des prix dans les provinces.

Les prix compris dans l'indice ne se rapportent pas aux unités de travail ni de matériaux comme c'est habituellement le cas dans l'indice des prix de la construction; ils se rapportent plutôt aux unités de travail de construction effectuées, comme le défrichage d'une acre de terrain, l'excavation d'une verge ou l'épandage à chaud d'une tonne de béton bitumineux. En outre, l'indice comprend le prix de certains matériaux, par exemple, les tuyaux de ponceau fournis habituellement à l'entrepreneur par les ministères de la Voirie. Les prix des travaux de construction routière sont des moyennes pondérées des prix de soumission par les unités de construction par groupe de marchés classés selon les caractéristiques des marchés qui déterminent le prix et les éléments d'offre tels que le volume de chaque poste, le type de marché et la situation géographique. Les prix de matériaux fournis sont les prix payés par les ministères aux fournisseurs.

Indices des prix à la construction dans les services d'électricité

En ce qui concerne les services d'électricité, l'indice a pour but de fournir une estimation des conséquences des variations des prix sur le coût des matériaux, de la main-d'œuvre et du matériel utilisés dans la construction et l'équipement des services d'électricité au cours d'une période de référence donnée. L'indice sert à mesurer combien il faudrait payer en plus ou en moins pour réaliser un programme de construction identique à celui de la période de référence en utilisant les mêmes techniques de construction et en supposant que les taux de rentabilité et de productivité de la construction soient les mêmes pour les deux périodes.

As the market does not yield comparable selling prices for such unique transactions as, for example, the sale of a transmission line, it was not possible to produce an index of the prices of completed structures. Completed structure indexes would be appropriate for users wishing either to estimate reproduction costs or to deflate capital formation. For such uses the indexes introduced in this publication have specific short-comings. Nonetheless, they may be helpful for such purposes provided the users understand the deficiencies. Thus the reader is asked to make particular note of Section II, of Occasional Paper Catalogue 62-526 Price Indexes of Electrical Utility Construction - The Necessity for Compromise and Section XI, (of the same paper) Uses and Limitations. In addition, because particular construction projects are unique, the aggregate indexes will not likely be appropriate for specific projects since they relate to an average mix of materials, labour and equipment derived from a variety of projects in a specific base period. Thus, if the component price indexes and their weights included in the aggregate index presented herein are inappropriate for a particular purpose the user should consider selecting appropriate component indexes from among those published herein. These indexes could then be combined into an aggregate index by utilizing weights derived from the projects or assets to be costed or deflated.

Prices used in the indexes are for the most part selling prices reported monthly by manufacturers for materials or equipment. The price reported is for units and terms of sale representative of the volume sales of the manufacturer. Where sales to electric utilities form a small share of the total sales of the manufacturer, the price reported may not adequately represent the price to the construction trade and others directly involved in constructing and equipping electric utility facilities. In such cases, prices charged other manufacturers or wholesalers have been included in the index. Federal sales tax changes are reflected in the index but no adjustments have been made for provincial tax changes. Until December 1964 wage rate data were supplied by the federal Department of Labour and represented minimum hourly rates paid to construction workers in major cities employed on federal government contracts. In 1965 union basic wage rates reported by major utilities and some contractors were incorporated into the index. The sample selected provides an estimate of wage rate change for urban own account and contract electric utility construction. Some further improvements will be made to improve the coverage relating to rural non-union work for transmission lines.

Construction has been defined as new construction or major reconstruction for distribution systems, transmission lines and transformation or switching stations. Maintenance and operating costs are excluded. Cost data were supplied by major utilities, relating to own account and to contract construction erected during the last half of the 1950's. Weights were derived from these data which indicated the relative importance of the major inputs to the construction. The components of cost relating to distribution and transmission facilities encompass such items as poles, hardware, conductors, insulators, meters, distribution transformers and

Comme il est impossible d'obtenir directement sur le marché des prix de vente comparables pour des opérations de caractère aussi unique, par exemple, que la vente d'une ligne de transport d'énergie, Statistique Canada n'a pu établir un indice du prix des installations en place. Un tel indice ne serait utile que si l'on désirait obtenir une estimation des sommes qu'il faudrait engager pour réaliser à nouveau un programme de construction identique ou encore pour dégonfler une formation de capital. Les indices publiés ici présentent en ce sens certaines lacunes. Ils peuvent néanmoins servir à de telles fins pourvu que les utilisateurs en comprennent les limites. Les lecteurs peuvent se rapporter aux Sections III et XI de la publication *Price Indexes of Electrical Utility Construction* (Statistique n° 62-526 au catalogue): "The Necessity for Compromise" et "Uses and Limitations". De plus, en raison du caractère unique de chaque projet de construction, l'indice synthétique ne pourra sans doute pas s'appliquer à un projet bien précis car il porte justement sur une moyenne des matériaux, de la main-d'oeuvre et du matériel utilisés dans la réalisation de plusieurs projets au cours d'une période de référence donnée. Ainsi, si les indices détaillés et les poids correspondants qui composent les indices synthétiques présentés ici ne conviennent pas à un usage bien précis, l'utilisateur pourra toujours se servir des autres indices détaillés et construire, à l'aide des coefficients de pondération, les indices de son choix, soit pour évaluer le coût d'un projet, soit pour établir des facteurs de dégonflement.

La plupart des prix des matériaux et du matériel utilisés pour établir les indices sont les prix de vente déclarés mensuellement par les fabricants. Ces prix sont représentatifs des unités de mesure et des conditions de vente valables pour les ventes en grande quantité de fabricants. Lorsque les ventes aux services électriques ne représentent qu'un faible pourcentage du chiffre d'affaire d'un fabricant, il est possible que le prix déclaré ne représente pas de façon satisfaisante le prix consenti aux entreprises en construction et aux autres industries s'occupant directement de construction et d'installation de services d'électricité. Dans ces cas, on a inclus dans l'indice les prix facturés aux autres fabricants ou grossistes. On a tenu compte, dans l'établissement de l'indice, des variations de la taxe de vente fédérale; toutefois, il n'a été fait aucun redressement pour les variations de taxe provinciale. Jusqu'en décembre 1964, les données sur les taux de rémunération étaient fournies par le ministère fédéral du Travail et représentaient le salaire horaire minimum versé aux personnes travaillant au titre d'un marché accordé par le gouvernement fédéral dans certaines grandes villes. En 1965, on fit entrer dans l'indice le salaire de base exigé par les syndicats et déclaré par les principaux services et par certains entrepreneurs. L'échantillon choisi représente donc une estimation des variations du taux de rémunération dans la construction en ville de services électriques pour compte propre ou au titre d'un marché. Certaines améliorations à l'indice sont prévues de façons à l'étendre aux personnes non syndiquées travaillant dans les régions rurales à la construction de lignes de transport d'énergie.

Le terme "construction" a été défini comme étant la construction neuve ou la réparation des réseaux de distribution, de lignes de transport d'énergie, de postes de transformation ou de postes de manoeuvre. L'entretien et les frais d'exploitation ne sont pas compris. Les données sur les prix de revient sont fournies par les principaux services d'électricité et portent sur la construction exécutée pour compte propre ou au titre d'un marché au cours de la deuxième moitié des années cinquante. Les poids tirés de ces données représentent l'importance relative des principaux éléments entrant dans la construction. Les composantes du coût de la distribution et du transport comprennent certains éléments comme

expenditures for labour, e.g. - linemen and groundmen. Costs relating to construction equipment such as trucks, and components of equipment operating costs such as tires, gasoline and repairs were also included. Transformation and switching stations encompass some of the items listed above but the most important elements of cost relate to transformers and switching equipment. Expenditures for land and rights-of-way have been excluded.

The term Canadian electric utility has been defined to include municipal as well as nonmunicipal utilities but the majority of the cost data tabulated was derived from the major nonmunicipal utilities. Manufacturers who produce electricity for their own use and who may also sell electricity have been excluded from the cost survey.

Price Indexes of Hydro-electric Generating Stations

The following additional points may be of assistance to users of the hydro-electric generating stations index which was described in some detail in Statistics Canada Occasional Paper, Catalogue 62-533.

- (a) Wage rate data are derived from a variety of sources but mainly from the Canadian Construction Association surveys of union agreements and from Federal Pay Research Bureau studies of salaries paid professional, technical and clerical personnel. Basic wage rates, excluding fringe benefits, were used in index calculations.
- (b) Prices for ready-mix concrete and for earth and gravels in place have been utilized as replacements for input prices of labour, materials and equipment rental for concrete production and embankments in place.
- (c) Prices are included for some categories of expense not previously included in input price indexes for construction: interest during construction, overhead expense and the provision and operation of temporary camp accommodation.
- (d) Weighting patterns exclude expenditure for ancillary facilities for logging and navigation permanent houses, etc.

Price Indexes of Machinery and Equipment

In response to the need of users wishing either to correct expenditure data of machinery and equipment for price change or to make comparison of commodity movement, a system of machinery and equipment indexes has been under development for a number of years. This is a system of industry indexes relating to types of equipment purchases made by establishments belonging to industries as defined by the 1960 Standard Industrial Classification.

les poteaux, la quincaillerie, les conducteurs, les isolateurs, les compteurs, les transformateurs de distribution et les dépenses de main-d'oeuvre (monteurs, personnel de service, etc.). Les dépenses entraînées par le matériel de construction (camions et pièces d'équipement) et les frais d'exploitation (pneus, essence et réparations) sont également inclus. Les postes de transformation et les postes de transformation et les postes de manœuvre comprennent certains des éléments ci-dessus; les frais les plus importants sont cependant entraînés par les transformateurs et les appareils de connexion. Les dépenses foncières et les droits de passage ont été exclus.

Par définition, l'expression "service d'électricité canadien" englobe aussi bien les services municipaux que les autres; toutefois, la majeure partie des données de coût ont été tirées des déclarations des services non municipaux. Les fabricants qui produisent de l'électricité destinée à l'auto-consommation et qui peuvent également vendre de l'électricité ont été exclus de ce recensement.

Indices de prix des centrales hydroélectriques

Les points supplémentaires ci-après peuvent aider les utilisateurs de l'indice de centrales hydroélectriques décrit en détail dans le bulletin hors-série de Statistique Canada portant n° 62-533 au catalogue.

- a) Les données sur le taux de rémunération proviennent de diverses sources et surtout des enquêtes sur les accords syndicaux de l'Association canadienne de la construction et des études du Bureau de recherche sur les traitements portant sur la rémunération des travailleurs intellectuels, des techniciens et du personnel administratif. Pour le calcul de l'indice, on a utilisé les taux de rémunération de base avant avantages sociaux non compris.
- b) Au lieu du prix des entrées de main-d'oeuvre, de matériaux et de location de matériel pour la production de béton et des remblais effectués, on a utilisé le prix du béton préparé et celui de la terre et du gravier en place.
- c) L'indice comprend les prix correspondant à certaines catégories de dépenses qui n'étaient pas reprises auparavant dans les indices de prix des entrées dans la construction: intérêt pendant la construction, frais généraux, fourniture et entretien de baraquements temporaires.
- d) Les facteurs de pondération ne comprennent pas les dépenses affectées aux installations auxiliaires pour l'exploitation forestière et la navigation, les maisons permanentes, etc.

Indices des prix des machines et du matériel

Afin de répondre au besoin des utilisateurs qui désirent réviser les données sur les dépenses en machines et en matériel, fonction des changements de prix ou établir une comparaison du mouvement des marchandises, on prépare depuis un certain nombre d'années un système d'indices des prix des machines et du matériel. Il s'agit d'un système d'indices par industrie ayant trait aux genres d'achats de matériel des établissements qui font partie des industries définies dans la Classification type des industries de 1960.

The base-weighted indexes give an estimate of how much more, or less, it would cost today to purchase a group of machines specified for a particular base period.

The interim time base for the indexes is 1968 = 100 and most of the data from which weighting patterns were derived came from 1968 or nearby years. Such data were usually supplied by major purchasers.

Conceptually purchasers' prices should be utilized in such indexes but because of a number of practical problems, manufacturers' selling prices were usually used. Such prices were then corrected as relevant for duty, exchange and federal sales tax.

Foreign prices utilized in the index are either U.S. Bureau of Labour Statistics commodity indexes or Prices Division collections from manufacturers most of whom reside in the United States.

The first industry index was released mid-1971 and related to purchases by the construction industry. Indexes for other industries will be released from time to time as they become available. In the interim preliminary indexes for a number of other industries are available on request. Certain commodity indexes which exclude adjustments for exchange, duty and federal sales tax can also be provided on request.

Les indices pondérés en fonction de la base donnent une estimation de la différence du prix d'achat d'un groupe de machines déterminé pour une période de base donnée.

La base provisoire pour les indices est 1968 = 100. La plupart des données dont on a extrait les facteurs de pondération dataient de 1968 environ. D'habitude, ces données étaient fournies par les principaux acheteurs.

Du point de vue conceptuel, on devrait utiliser les prix des acheteurs dans ce genre d'indices, mais on a habituellement employé les prix de vente de fabricants pour des question d'ordre pratique. On a ensuite apporté à ces prix les corrections appropriées pour les droits de douane, le change et la taxe de vente fédérale.

Les prix étrangers utilisés dans l'indice sont les indices de prix des marchandises du *U.S. Bureau of Labour Statistics* ou ceux que la Division des prix a recueillis auprès des fabricants dont la majorité réside aux États-Unis.

Le premier indice par industrie a été publié au milieu de 1971; il se rapporte aux achats de l'industrie de la construction. Les indices des autres industries seront publiés de temps à autre, à mesure qu'ils seront disponibles. En attendant, on peut obtenir sur demande les indices préliminaires pour un certain nombre d'autres industries. Il en est de même pour certains indices de prix de marchandises, compte non tenu des ajustements pour le change, les droits de douane et la taxe de vente fédérale.

SYMBOLS

The following standard symbols are used in Statistics Canada publications:

- . . Figures not available.
- . . . Figures not appropriate or not applicable.
- Nil or zero.
- - Amount too small to be expressed.
- p Preliminary figures.
- r Revised figures.
- x Confidential to meet secrecy requirements of the Statistics Act.

SIGNES CONVENTIONNELS

Les signes conventionnels suivants sont employés uniformément dans les publications de Statistique Canada:

- . . Nombres indisponibles.
- . . . N'ayant pas lieu de figurer.
- Néant ou zéro.
- - Nombres infimes.
- p Nombres provisoires.
- r Nombres rectifiés.
- x Confidentiels en vertu des dispositions de la Loi sur la Statistique relatives au secret.

NOTES ON PRICES AND PRICE INDEX NUMBERS

Industry Selling Price Index: Manufacturing (1961 = 100)

The industry selling price index (Total Manufacturing) moved 0.2% lower in December to 182.3 from the November index of 182.6. This was the first since September 1973 that a downward movement was recorded. The index, however, was 19.2% higher than the December 1973 index of 152.9.

In terms of the relative contribution to the overall change in the total manufacturing index, the more notable changes were decreases recorded in the foods and beverages group (-1.6%) particularly in the sugar refineries (-20.1%) and feed manufacturers (-1.0%). Decreases also occurred in the wood products group (-0.6%) reflecting lower prices in the sawmills and planing mills industry (-1.7%). Lower prices recorded in the smelting and refining industry (-1.7%) were mainly responsible for lower levels of the primary metals group.

The most notable increases for the period occurred in the chemical and chemical products group (1.0%) and in the non-metallic minerals group (2.2%) where an advance of (5.8%) was registered for the ready mix concrete manufacturers industry.

NOTES SUR LES PRIX ET LES INDICES DE PRIX

Indice des prix de vente dans l'industrie: industries manufacturières (1961 = 100)

L'indice des prix de vente dans l'industrie (ensemble des industries manufacturières) a diminué de 0.2% pour passer de 182.6 en novembre (chiffre rectifié) à 182.3 en décembre. C'était la première fois que l'indice baissait depuis septembre 1973, mais il était cependant, supérieur de 19.2% à celui de décembre 1973 (152.9).

En ce qui concerne l'apport relatif des groupes à la variation globale de l'indice des industries manufacturières, les variations les plus sensibles ont été enregistrées dans le groupe des aliments et boissons qui a baissé de 1.6%, en particulier par suite de diminutions des prix dans les raffineries de sucre (-20.1%) et chez les fabricants de provendes (-1.0%). On a également observé des baisses dans le groupe des produits du bois (-0.6%) par suite des diminutions de prix dans les scieries (-1.7%). De même les prix ont diminué dans l'industrie de la fonte et de l'affinage (-1.7%), entraînant des baisses dans le groupe de l'industrie des métaux primaires.

Les plus fortes augmentations au cours de cette période ont été enregistrées dans le groupe des produits chimiques (1.0%) et dans celui des minéraux non métalliques (2.2%) où l'on a observé une hausse de 5.8% dans l'industrie du béton préparé.

General Wholesale Price Index (1935-39=100)

The General Wholesale Index decreased 1.9% to 481.9 from the revised November index of 491.3. This was the first monthly decrease since September 1973. However, it was 16.7% higher than December 1973. Four of the eight major groups decreased, two remained the same and two increased. The vegetable products group index decreased 5.3% to 539.4 from the revised November index of 569.7. This reflected price declines for total sugar and its products and total fruits fresh 22.6% and 18.4% respectively. Textile products went down 4.2% to 405.3 from the revised index of 423.0 for November due to a sharp fall in raw cotton prices. Non ferrous metals group index declined 2.1%. Animal products index and Iron products index remained the same while the non-metallic minerals rose 0.1% and the chemical products 2.7% to 363.6 from the revised index of 354.2. As a result of increases in soap and detergents, fertilizer materials etc.

Indice général des prix de gros (1935-39=100)

L'indice général des prix de gros a diminué de 1.9% pour passer de 491.3 en novembre (chiffre rectifié) à 481.9 en décembre. C'était la première fois que l'indice baissait depuis septembre 1973. Toutefois, il était supérieur de 16.7% à celui de décembre 1973. Parmi les huit groupes principaux, quatre ont diminué, deux n'ont pas varié et deux ont augmenté. L'indice du groupe des produits d'origine végétale a diminué de 5.3% pour passer de 569.7 en novembre (chiffre rectifié) à 539.4 en décembre. Cette baisse était due aux diminutions de prix du sucre et de ses produits et de tous les fruits frais, qui ont baissé respectivement de 22.6% et 18.4%. Les produits textiles ont diminué de 4.2% pour passer de 423.0 en novembre (chiffre rectifié) à 405.3 en décembre, par suite de la chute des prix du coton brut. L'indice du groupe des métaux non ferreux a diminué de 2.1%. L'indice des produits animaux et celui des produits du fer n'ont pas varié, tandis que l'indice des produits minéraux non métalliques a augmenté de 0.1%; celui des produits chimiques a grimpé de 2.7% pour passer de 354.2 en novembre (chiffre rectifié) à 363.6 en décembre, par suite des augmentations de prix enregistrées pour le savon et les détersifs, les engrais etc.

Security Price Indexes (1961=100)

The common stock prices index decreased 3.9% in December to 127.3. Among the three major groups, industrials declined 4.7% to 129.9, utilities 0.9% to 110.8 and finance 3.7% to 139.4. Among the thirteen industrial sub-groups, stock prices in printing and publishing sub-group increased 1.9%, while the other sub-groups registered declines. Among the utilities sub-groups, telephone index advanced 3.2% to 88.1, transportation increased slightly (0.1%) from 255.5 to 255.8. A decrease in finance index reflected losses of 4.6% in banks (162.0) and 0.9% in investments and loans (104.8).

During the same period, the index of stock prices in mining decreased 13.1% to 107.9 as gold and base metals moved down respectively 14.5% and 10.4% to 187.7 and 65.2.

In the case of the two supplementary indexes, uranium decreased 5.2% to 190.0 and primary oil and gas decreased 17.1% to 208.0.

The preferred stock index moved down 5.3% to 53.1 in December from 56.1 in November.

Canadian Farm Products Price Index (1935-39=100)

The price index of Canadian farm products at terminal markets declined 0.4% to 508.6 in December from the November index of 510.8. A decrease of 1.2% to 572.9 from 580.1 in the animal products index reflected lower prices for steers on both Eastern and Western markets, and for lambs and poultry in the East. Higher prices were shown for eggs and hogs on both markets, for cheesemilk in the East, and for lambs, raw wool, calves and fluid milk in the West.

The field products index rose 0.5% to 444.3 from 442.0 on higher prices for hay on both Eastern and Western markets, and for oats and wheat in the East. Lower prices were shown for potatoes on both markets, and for rye and flax in the West.

Thirty Industrial Materials Price Index (1935-39=100)

The price index of thirty industrial materials, calculated as an unweighted geometric average, declined 0.9% to 506.5 in December from the revised November index of 511.2. Prices were lower for thirteen commodities, higher for six and unchanged for eleven. Principal changes included increases for raw sugar, steel scrap, raw cotton, steers, tin, and beef hides, domestic copper, wheat, spruce lumber,

Indices des cours des valeurs mobilières (1961=100)

L'indice des cours des actions ordinaires a diminué de 3.9% en décembre pour s'inscrire à 127.3. Parmi les trois grands groupes, les valeurs industrielles ont enregistré une perte de 4.7% pour s'établir à 129.9, les services publics accusent une baisse de 0.9% pour se fixer à 110.8 et les finances ont perdu 3.7% pour marquer 139.4. Parmi les treize sous-groupes industriels, une augmentation de 1.9% est à signaler dans le prix des actions de l'impression et de l'édition; les autres sous-groupes ont enregistré une perte. En ce qui concerne les services publics, l'indice du téléphone a progressé de 3.2% pour atteindre 88.1, les valeurs du transport ont légèrement augmenté (0.1%) passant de 255.5 à 255.8. La baisse de l'indice des finances est due aux pertes de 4.6% de l'indice bancaire (162.0) et de 0.9% des valeurs des placements et des prêts (104.8).

Au cours de la même période, l'indice des prix des titres miniers est descendu de 13.1% pour se fixer à 107.9, à la suite d'une perte de 14.5% des aurifères (187.7), et d'une diminution de 10.4% des actions des métaux communs, qui se sont stabilisés à 65.2.

Pour ce qui est des deux indices de prix supplémentaires, on a observé une diminution de 5.2% dans le cas de l'uranium qui s'est fixé à 190.0 et une baisse de 17.1% du pétrole et du gaz primaires qui tombaient à 208.0.

L'indice des actions privilégiées a diminué de 5.3%, passant de 56.1 en novembre à 53.1 en décembre.

Indice des prix des produits agricoles canadiens (1935-39=100)

L'indice des prix des produits agricoles canadiens sur les marchés terminaux a diminué de 0.4% pour passer de 510.8 en novembre (chiffre rectifié) à 508.6 en décembre. L'indice des produits animaux a baissé de 1.2% (il est passé de 580.1 à 572.9) à la suite des diminutions des prix des bouvillons, sur le marché de l'Est et l'Ouest, ainsi que des agneaux et de la volaille sur le marché de l'Est. On a enregistré des hausses de prix pour les oeufs et les porcs sur les deux marchés, pour le lait de fromagerie dans l'est, et pour les agneaux, la laine brute, les veaux et le lait naturel dans l'Ouest.

L'indice des produits de grande culture a augmenté de 0.5% pour passer de 442.0 à 444.3, par suite des hausses de prix enregistrées pour le foin sur les deux marchés, et pour l'avoine et le blé dans l'Est. Par contre, les prix des pommes de terre ont baissé sur les deux marchés et ceux du seigle et du lin ont diminué dans l'Ouest.

Indice des prix de trente matières industrielles (1935-39=100)

L'indice des prix de trente matières industrielles, calculé comme moyenne géométrique non pondérée, a baissé de 0.9% pour passer de 511.2 en novembre (chiffre rectifié) à 506.5 en décembre. Les prix de treize marchandises ont baissé, ceux de six ont augmenté et onze n'ont pas varié. Les principales variations comprennent des baisses de prix pour le sucre brut, les résidus d'acier, le coton brut, les bouvillons, l'étain, l'avoine, les peaux de

bleached sulphite pulp and iron ore while increases were recorded for raw rubber, raw wool, steel sheets, structural shapes, linseed oil and hogs.

Farm Input Price Index Fourth Quarter 1974 (1961 = 100)

The Farm Input Price Index for Canada increased 3.9% in the 4th quarter of 1974, moving to 202.8 from a 3rd quarter level of 195.2. The eastern index rose 4.4% to 208.4 from 199.7, while the western index moved up 3.4% to 196.3 from a revised 3rd quarter level of 189.9. Over the previous 12 month period, the index rose 15.2% in Canada, 15.4% in the East, and 14.8% in the West.

Higher prices for livestock feed, hired labour, machinery and motor vehicles replacement and operation, fertilizer and custom work were responsible for most of the increase in the index.

Consumer Price Movements

The Consumer Price Index for Canada (1961 = 100) rose 1.0% to 175.8 in December from 174.1 in November. Though all major components moved up, a 1.4% advance in the Food index accounted for over two-fifths of the All-Items rise, and a 0.8% increase for Housing contributed a further quarter. The Tobacco and Alcohol component went up 2.2% and that for Clothing 0.6%. Increases of 0.4% were registered for the Transportation and for the Recreation, Education and Reading indexes, and the Health and Personal Care element rose 0.7%. The All-Items Index for the month of December 1974 was 12.4% higher than that for December 1973. The table at the end of this text provides comparisons of CPI changes between corresponding months of 1973 and 1974 as well as the annual average change between 1973 and 1974, amounting to 10.9%.

The Food index advance of 1.4% to 201.6 in December from 198.8 in November was largely attributable to a 1.5% rise in the level of prices for food consumed at home; food eaten away from home moved up 1.0%. Higher prices for sugar and for beef were major contributors to the increased index for home-consumed food. In early December retail sugar prices peaked nearly 25% above the month before, while beef prices, reversing a three-month downward trend, rose by 4.2% from their November level. Pork prices exhibited mixed movements over the month, edging up, on average, by 0.9% in contrast to poultry prices which moved down 3.3%. Declines were also registered for fresh produce as vegetable and fruit prices averaged 5.3% and 3.5% lower, respectively, compared with a month earlier. Prices for processed vegetables and fruit, on the other hand, continued to climb steadily to levels 28.6% and 17.6%, respectively, above those of December 1973. A 1.0% rise in the dairy products index in the latest month was largely attributable to a further increase in fresh milk prices, while higher quotations for such items as cookies, cake mixes and breakfast cereals contributed to moving the cereal and bakery products index up 1.5%. Margarine prices registered a 6% rise in December

boeuf, le cuivre canadien, le blé, le bois d'épinette, la p blanchie au sulphite et le minerai de fer; on a enregistré hausses pour le caoutchouc brut, la laine brute, les feuilles d'ac les profilés de charpente, l'huile de lin et les porcs.

Indices des prix des entrées dans l'agriculture, quatrième trimestre de 1974 (1961 = 100)

L'indice canadien des prix des entrées dans l'agriculture augmenté de 3.9% au cours du 4e trimestre de 1974, passant 195.2 au 3e trimestre à 202.8. L'indice pour l'Est a enregistré hausse de 4.4%, passant de 199.7 à 208.4, tandis que l'indice l'Ouest progressait de 3.4% pour atteindre 196.3 contre 18 (chiffre rectifié). Pendant la période précédente de 12 m l'indice a augmenté de 15.2% au Canada, de 15.4% dans l'Es de 14.8% dans l'Ouest.

La plus grande partie de l'augmentation de l'indice attribuable aux hausses de prix des aliments pour le bétail, d main-d'oeuvre salariée, du remplacement et de l'exploitation machines et des véhicules automobiles, des engrais et du tra sur commande.

Mouvements des prix à la consommation

L'indice des prix à la consommation au Can (1961 = 100) a augmenté de 1.0%; il est passé de 174.1 novembre à 175.8 en décembre. Bien que tous les élém principaux aient enregistré une hausse, c'est l'indice de l'alime tion qui a le plus augmenté, soit de 1.4%, et il a contribué à des deux cinquièmes de l'augmentation de l'indice d'ensemble plus, l'indice de l'habitation, avec une augmentation de 0.8% compté pour un quart de la hausse globale. L'indice des tabac alcools a augmenté de 2.2% et celui de l'habillement de 0.6% a enregistré des hausses de 0.4% de l'indice des transports et celui des loisirs, formation et lecture; quant à l'indice de l'hyg et des soins personnels, il a augmenté de 0.7%. L'indice d'ens ble a augmenté de 12.4% entre décembre 1973 et décembre 1 Le tableau de la fin de ce texte, fournit des comparaisons variations de l'IPC entre des mois correspondants de 197 1974, ainsi que la variation annuelle moyenne entre 1973 et 1 qui se chiffre à 10.9%.

L'indice de l'alimentation a augmenté de 1.4% (il est p de 198.8 en novembre à 201.6 en décembre) par suite, essenti ment, de la hausse de 1.5% du prix des aliments consommés maison; les repas pris au restaurant ont augmenté de 1.0% majeure partie de l'augmentation de l'indice des aliments sommés à la maison découle surtout de la hausse des prix du s et du boeuf. Au début de décembre, les prix de détail du s avaient atteint un sommet représentant une augmentation de de 25% par rapport au mois précédent, tandis que les pri boeuf, à l'inverse de la tendance des trois mois précédents, av augmenté de 4.2%. Les prix du porc ont présenté diverses ten ces au cours du mois, ils ont augmenté en moyenne de 0.9%, que les prix de la volaille ont baissé de 3.3%. On a égale enregistré des baisses pour les produits frais comme les légum les fruits dont les prix ont diminué respectivement de 5.3% et par rapport au mois précédent. Les prix des fruits et légume conserve, par contre, ont continué de grimper régulièrement enregistrer des augmentations respectives de 17.6% et 28.6% rapport à décembre 1973. L'augmentation de 1.0% de l'indie produits laitiers le mois dernier est surtout attribuable aux mentations du prix du lait frais; quant à l'indice des céréal produits céréaliers, il a augmenté de 1.5% par suite des ha

to stand 65% above twelve months earlier. Between December 1973 and December 1974, the total Food index increased 17.1% with the price of food consumed at home rising 17.0% and that for food away from home 17.8%.

The Housing index rose 0.8% to 173.5 in December from 172.0 in November. Within the shelter component, home ownership costs moved up 0.8% and rents advanced 0.3%. The household operation element rose 1.1% mainly in response to higher domestic gas rates in some centres, to general price increases for most appliances and to advances in a number of household supply items such as floor wax, food wrap and light bulbs. In addition, furniture prices rose in some outlets in a number of cities and increases were also registered for tableware, floor coverings and linens. Between December 1973 and December 1974, the Housing index advanced 10.2%.

The Clothing index advanced 0.6% to 158.2 in December from 157.2 in November mainly in response to increased charges for clothing services which rose, on average, 5.0% due to generally higher prices for dry-cleaning, laundry and shoe repairs. A rise of 0.5% in the men's clothing component resulted from advances in most items surveyed and increases of 0.3% and 0.1% were recorded in the children's wear and footwear indexes, respectively. In contrast, the women's wear element declined 0.3% mainly because of sale prices on some items of outer wear, and the piece goods index edged down 0.2%. In the twelve months to December 1974, the Clothing index rose 9.2%.

The Transportation index rose 0.4% to 157.7 in December from 157.1 in November. This advance was mainly attributable to higher taxi fares in Montreal and Winnipeg and to increases in the plane and train fares indexes. Although motor oil prices rose in a number of centres, the average price of gasoline edged down for the sixth consecutive month. The Transportation index increased 11.6% in the latest twelve months.

The Health and Personal Care index rose 0.7% to 177.7 in December from 177.6 in November mainly because of price advances for most toiletry items in a number of centres and because charges for men's haircuts rose, on average, in Vancouver and Victoria. Prescribed and non-prescribed pharmaceuticals also recorded general increases. In the latest twelve months, the Health and Personal Care index advanced 10.9%.

The Recreation, Education and Reading index rose 12.1% to 166.3 in December from 165.6 in November mainly in response to generally higher prices for toys and games and to increased hotel rates in some cities. The home entertainment component remained unchanged as increased quotations for television sets in a number of cities were offset by scattered price reductions for stereo combinations and photograph records. In the latest twelve months, the Recreation, Education and Reading index advanced 12.1%.

enregistrées par des articles comme les biscuits secs, les mélanges à gâteau et les céréales de table. Le prix de la margarine a augmenté de 6% de novembre à décembre et de 65% de décembre 1973 à décembre 1974. En un an, l'indice global de l'alimentation a augmenté de 17.1%, avec des augmentations respectives de 17.0% et 17.8% pour les aliments consommés à la maison et pour les repas pris au restaurant.

L'indice de l'habitation a augmenté de 0.8%; il est passé de 172.0 en novembre à 173.5 en décembre. Pour ce qui est de l'élément logement, les coûts de propriété ont augmenté de 0.8% et des prix des loyers de 0.3%. Les dépenses de ménage ont augmenté de 1.1% surtout à cause de la hausse des tarifs du gaz domestique dans certaines villes, ainsi qu'à la suite des augmentations générales des prix de la plupart des appareils ménagers et d'un grand nombre de fournitures ménagères comme la cire à plancher, les emballages pour aliments et les ampoules électriques. De plus, le prix des meubles a augmenté dans certains points de vente de certaines villes et l'on a observé des hausses des prix des articles de table, des revêtements de sol et du linge de maison. Entre décembre 1973 et décembre 1974, l'indice de l'habitation a augmenté de 10.2%.

L'indice de l'habillement a augmenté de 0.6% il est passé de 157.2 en novembre à 158.2 en décembre principalement à cause de la hausse des tarifs des services vestimentaires qui ont augmenté, en moyenne, de 5.0%, par suite des augmentations générales des frais de nettoyage à sec, de blanchissage et de réparation des chaussures. L'indice des vêtements pour hommes a augmenté de 0.5% à la suite de hausse générales des prix de tous les articles observés et l'on a également enregistré des hausses de 0.3% et 0.1%, respectivement, des prix des vêtements pour enfants et des chaussures. Par contre, les prix des vêtements pour femmes ont baissé de 0.3% surtout à cause des soldes de certains vêtements de dessus; quant aux tissus à la verge, leurs prix ont également diminué de 0.2%. De décembre 1973 à décembre 1974, l'indice de l'habillement a augmenté de 9.2%.

L'indice des transports a augmenté de 0.4%; il est passé de 157.1 en novembre à 157.7 en décembre. Cette augmentation est surtout attribuable à la hausse des tarifs des taxis à Montréal et à Winnipeg et à celle des tarifs aériens et ferroviaires. Bien que les prix de l'huile à moteur aient augmenté dans beaucoup de villes, le prix moyen de l'essence a baissé pour le sixième mois consécutif. L'indice des transports a augmenté de 11.6% par rapport à décembre 1973.

L'indice de l'hygiène et des soins personnels a augmenté de 0.7%, il est passé de 177.6 en novembre à 178.7 en décembre surtout à cause de la hausse des prix de la plupart des articles de toilette dans bon nombre de villes et par suite de la hausse des tarifs des coiffeurs pour hommes à Vancouver et à Victoria. On a enregistré des hausses générales des prix des médicaments avec et sans ordonnance. Au cours des douze derniers mois, l'indice de l'hygiène et des soins personnels a augmenté de 10.9%.

L'indice des loisirs, formation et lecture a augmenté de 0.4%, il est passé de 165.6 en novembre à 166.3 en décembre par suite de la hausse des prix des jouets et jeux et des tarifs des hôtels dans certaines villes. L'élément 'détente au foyer' n'a pas bougé car la hausse des prix des appareils de télévision dans beaucoup de villes a été compensée par des diminutions des prix des meubles-stéréo et des disques. Au cours des douze derniers mois, l'indice des loisirs, formation et lecture a augmenté de 12.1%.

The Tobacco and Alcohol index advanced 2.2% to 152.0 in December from 148.7 in November with most of the rise being attributable to generally higher cigarette prices and to increases for home-consumed beer in Quebec. In the latest twelve months, the Tobacco and Alcohol index rose 11.0%.

Consumer price movements, reclassified by goods and services, offer another view of the incidence of price change. Between November and December, the total goods index advanced 1.0% with the main impetus coming from non-durable goods which rose 1.3% mainly in response to higher prices for food, tobacco and alcoholic beverages and health and personal care supplies. The index for durable goods rose 0.6% chiefly because of higher quotations for appliances and furniture. Semi-durable goods advanced 0.3% mainly in response to higher prices for men's and children's wear, and for toys and games. A rise of 0.9% was recorded in the services index with the major contributor being the shelter, clothing and transportation elements. In the latest twelve months, the total goods index advanced 13.9% and that for services 9.7%.

L'indice des tabacs et alcools a augmenté de 2.2%; il est passé de 148.7 en novembre à 152.0 en décembre. L'essentiel de cette augmentation est attribuable à la hausse du prix des cigarettes et à celle du prix de la bière consommée à la maison, au Québec. Au cours des douze derniers mois, l'indice des tabacs et alcools a augmenté de 11.0%.

Les mouvements des prix à la consommation, reclassés en deux catégories, soit les biens et les services, présentent un autre aspect de l'évolution des variations de prix. Entre novembre et décembre, l'indice global des biens a augmenté de 1.0% surtout par suite de la hausse des prix des biens non durables, qui ont augmenté de 1.3% à cause des augmentations enregistrées par les aliments, les tabacs, les boissons alcooliques et les fournitures de soins personnels. L'indice des biens durables a augmenté de 0.6% surtout à cause de la hausse du prix des meubles et des appareils ménagers. Les biens semi-durables ont augmenté de 0.3% en grande partie du fait de la hausse du prix des vêtements pour hommes et pour enfants, et des jouets et jeux. On a enregistré une hausse de 0.9% de l'indice des services par suite de la hausse des coûts de logement, des prix des vêtements, et des tarifs de transport. Au cours des douze derniers mois, l'indice total des biens a augmenté de 13.9% et celui des services de 9.7%.

Month — Mois	Consumer Price Indexes for Canada (1961 = 100) — Indices des prix à la consommation au Canada (1961 = 100)		Per cent change between corresponding months in 1973 and 1974 — Variation en % entre les mois correspondants de 1973 et 1974
	1973	1974	
January — Janvier.....	144.5	157.6	+ 9.1
February — Février.....	145.3	159.2	+ 9.6
March — Mars.....	145.7	160.8	+ 10.4
April — Avril.....	147.3	161.9	+ 9.9
May — Mai.....	148.4	164.6	+ 10.9
June — Juin.....	149.7	166.7	+ 11.4
July — Juillet.....	151.0	168.0	+ 11.3
August — Août.....	153.0	169.6	+ 10.8
September — Septembre.....	153.9	170.6	+ 10.9
October — Octobre.....	154.3	172.2	+ 11.6
November — Novembre.....	155.5	174.1	+ 12.0
December — Décembre.....	156.4	175.8	+ 12.4
Annual average — Moyenne annuelle.....	150.4	166.8	+ 10.9

Note: A measure of the change in the Consumer Price Index for Canada between the years 1973 and 1974 can be obtained by comparison of the annual average indexes (i.e., averages of the twelve monthly indexes) for both years as shown below: Note: On peut obtenir une mesure de la variation de l'indice des prix à la consommation au Canada entre 1973 et 1974 en comparant les moyennes annuelles des indices (c.à-d. les moyennes des douze indices mensuels) des deux années, comme ci-dessous:

<u>Industrial price indexes - Indices des prix dans l'industrie</u>							
Industry selling price index: manufacturing - 1961=100(1) - Indices des prix de vente dans l'industrie: industries manufacturières	182.3	182.6	152.9	150.4	- 0.2	1.7	19.2
General wholesale index - (1935-39=100)(2) - L'indice général de gros	481.9	491.3r	413.0	408.6	- 1.9	1.1	16.7
Vegetable products - Substances végétales	539.4	569.7r	422.2	414.0	- 5.3	2.0	27.8
Animal products - Produits animaux	508.2	508.0r	479.8	482.4	-	0.5	5.9
Textile products - Produits textiles	405.3	423.0r	391.5	386.5	- 4.2	1.3	3.5
Wood products - Produits du bois	568.5	570.3r	516.4	516.4	- 0.3	-	10.1
Iron products - Produits du fer	474.5	474.5r	377.2	372.0	-	1.4	25.8
Non-ferrous metals - Métaux non ferreux	413.6	422.4r	361.6	362.7	- 2.1	0.3	14.4
Non-metallic minerals - Minéraux non métallique	354.0	353.8r	277.3	258.2	0.1	7.4	27.7
Chemical products - Produits chimiques	363.6	354.2r	284.1	277.2	2.7	2.5	28.0
<u>Canadian farm products - (1935-39=100)(3) - Produits agricoles canadiens</u>							
Eastern - Total - De l'est	508.6	510.8	481.7	481.0	- 0.4	0.1	(3)
Western - Total - De l'ouest	475.9	481.7r	436.3	435.2	- 1.2	0.3	9.1
Field - Cultures	541.4	540.3	527.1	526.8	0.2	0.1	(3)
Animal - Animaux	444.3	442.0	437.8	436.1	0.5	0.4	(3)
	572.9	580.1r	525.5	525.9	- 1.2	0.1	9.0
<u>Selected price indexes - (2) - Certains indices de prix</u>							
Thirty industrial materials - (1935-39=100) - Trente matériaux industriels	506.5	511.2r	463.9	455.4	- 0.9	1.9	9.2
Residential building construction materials (1971=100) - Matériaux de construction résidentielle	133.8	137.7r	128.3	127.6	- 2.8	0.5	4.3
Non-residential building materials - (1961=100) - Matériaux de construction non résidentielle	185.3	194.4r	166.0r	164.0	- 4.7	1.2	11.6
<u>Consumer price indexes - Canada (1961=100) - Indices des prix à la consommation</u>							
All-items - Indice d'ensemble	175.8	174.1	156.4	155.5	1.0	0.6	12.4
Food - Aliments	201.6	198.8	172.1	171.8	1.4	0.2	17.1
Housing - Habitation	173.5	172.0	157.4	156.1	0.8	0.8	10.2
Clothing - Habillement	158.2	157.2	144.9	143.8	0.6	0.8	9.2
Transportation - Transports	157.7	157.1	141.3	140.1	0.4	0.9	11.6
Health and personal care - Soins personnels et hygiène	178.7	177.6	161.1	160.8	0.7	0.2	10.9
Recreation, education and reading - Loisirs, formation et lecture	166.3	165.6	148.3	148.3	0.4	-	12.1
Tobacco and alcohol - Tabacs et alcools	152.0	148.7	136.9	136.9	2.2	-	11.0
<u>Security price indexes - (1961=100) - Indices des cours de valeurs mobilières</u>							
Investors index - Total - Indices des portefeuillistes	127.3	132.5	174.8	192.9	- 3.9	- 9.4	- 27.2
Industrials - Total - Industriels	129.9	136.3	188.6	209.0	- 4.7	- 9.8	- 31.1
Industrial mines - Mines industrielles	79.9	85.3	132.3	147.3	- 6.3	- 10.2	- 39.6
Foods - Aliments	125.4	127.9	137.7	150.2	- 2.0	- 8.3	- 8.9
Beverages - Boissons	174.8	182.5	247.0	260.7	- 4.2	- 5.3	- 29.2
Textiles and clothing - Textiles et vêtements	105.6	114.6	142.2	165.2	- 7.9	- 13.9	- 25.7
Pulp and paper - Pâte et papier	106.4	110.9	137.2	157.1	- 4.1	- 12.7	- 22.4
Printing and publishing - Impression et édition	289.9	284.6	356.5	392.8	1.9	- 9.2	- 18.7
Primary metals - Métaux primaires	91.9	94.2	128.7	136.0	- 2.4	- 5.4	- 28.6
Metal fabricating - Fabrications des métaux	131.8	141.9	169.7	205.4	- 7.1	- 17.4	- 22.3
Non-metallic minerals - Minéraux non métalliques	123.1	132.6	160.8	181.2	- 7.2	- 11.2	- 23.5
Petroleum - Pétrole	174.5	187.4	302.0	336.6	- 6.9	- 10.3	- 42.2
Chemicals - Produits chimiques	93.3	101.3	107.3	118.4	- 7.9	- 9.4	- 13.0
Construction - Construction	107.4	115.1	143.9	159.5	- 6.7	- 9.8	- 25.4
Retail trade - Commerce de détail	119.0	120.2	133.6	148.8	- 1.0	- 10.2	- 10.9
Utilities - Total - Services publics	110.8	111.8	128.7	140.2	- 0.9	- 8.2	- 13.9
Pipeline - Pipe-line	92.6	98.7	130.4	143.1	- 6.2	- 8.9	- 29.0
Transportation - Transport	255.8	255.5	288.0	314.7	0.1	- 8.5	- 11.2
Telephone - Téléphone	88.1	85.4	81.3	83.6	3.2	- 2.8	8.4
Electric power - Énergie électrique	67.9	71.2	97.9	113.4	- 4.6	- 13.7	- 30.6
Gas distribution - Distribution du gaz	126.3	127.8	148.4	160.9	- 1.2	- 7.8	- 14.9
Finance - Total - Finances	139.4	144.7	173.1	188.5	- 3.7	- 8.2	- 19.5
Banks - Banques	162.0	169.8	205.0	222.6	- 4.6	- 7.9	- 21.0
Investment and loan - Placements et prêts	104.8	105.8	123.1	135.3	- 0.9	- 9.0	- 14.8
<u>Mining - Actions minières</u>							
Mining index - Total - Indices des prix des titres minières	107.9	124.1	135.7	138.2	- 13.1	- 1.8	- 20.5
Gold - Or	187.7	219.6	196.9	173.1	- 14.5	13.7	- 4.7
Base metals - Métaux communs	65.2	72.8	103.4	120.3	- 10.4	- 14.0	- 36.9
<u>Supplementary indexes - Indices supplémentaires</u>							
Uranium - L'uranium	190.0	200.5	285.3	299.8	- 5.2	- 4.8	- 33.4
Primary oils and gas - Pétrole et gaz primaires	208.0	250.8	460.8	501.4	- 17.1	- 8.1	- 54.9

(1) Gross weighted, including inter-industry shipments. For explanation see page 88. - Indice pondéré brut comprenant les livraisons inter-industrielles. Pour toute explication, voir page 88.

(2) Indexes for 1973 and 1974 are subject to revision. - Les indices pour 1973 et 1974 sont sujets à révision.

(3) Year to year percentage change not shown since these indexes are not comparable. Indexes subsequent to July 1973 are subject to revision. See notes page 89 for details of Western grain prices. - La variation proportionnelle d'une année à l'autre n'est pas indiquée étant donné que ces indices ne sont pas comparables. Les indices postérieurs à juillet 1973 sont sujets à révision. Voir les renvois de la page 89 pour les prix détaillés des grains de l'ouest.

TABLE 2. INDUSTRY SELLING PRICE INDEXES BY INDUSTRY AND SELECTED COMMODITIES
TABLEAU 2. INDICE DES PRIX DE VENTE DANS L'INDUSTRIE PAR INDUSTRIE ET PAR CERTAINS PRODUITS

Industries and selected commodities(1)		1961 = 100												Annual
		Month - Mois												
Industrie et certains produits(1)		J	F	M	A	M	J	J	A	S	O	N	D	Annual

TABLE 2. INDUSTRY SELLING PRICE INDEXES BY INDUSTRY AND SELECTED COMMODITIES

TABLEAU 2. INDICE DES PRIX DE VENTE DANS L'INDUSTRIE PAR INDUSTRIE ET PAR CERTAINS PRODUITS

		1961 = 100												
Industries and selected commodities(1)		Month — Mois												Annual
Industrie et certains produits(1)		J	F	M	A	M	J	J	A	S	O	N	D	Annuel
Structural steel shapes, light, less than 1/8" thick — Profils de charpente légers, en acier, moins de po. d'épaisseur.	1970	111.7	111.7	111.7	111.7	111.7	111.7	111.7	111.7	111.7	111.7	111.7	116.6	112.1
	1971	116.6	116.6	116.6	116.6	116.6	118.3	120.8	121.1	121.1	121.1	121.1	121.1	119.0
	1972	121.1	121.1	121.1	121.1	121.1	121.1	121.1	121.1	121.1	125.5	125.5	125.5	122.2
	1973	129.1	129.2	131.0	133.0	134.4	135.6	134.1	134.1	132.7	132.7	136.5	145.1	134.0
	1974	149.4	158.6	188.7	190.6	197.1	199.5	203.6	204.0	204.0	204.0	204.0	200.8	
12 2910 040														
Bars, hot rolled, bolt, nut, rivet, spike, etc. carbon and alloy — Barres laminées à chaud, boulons, écrou, rivets, pointes, etc. carbone et alliage.	1970													
	1971													
	1972									121.9	124.9	124.9	124.9	
	1973	128.1	128.0	129.5	132.4	132.9	133.3	133.1	133.2	132.8	133.1	135.8	144.1	133.0
	1974	147.6	149.2	158.9	160.6	173.4	176.9	177.9	178.2	178.2	178.3	178.3	178.0	
12 2910 082														
Bars, concrete reinforcing, incl. twisted, etc. — Barres pour béton armé, y compris barres torsadées, etc.	1970	104.1	104.1	106.4	107.3	107.3	107.3	107.3	107.3	107.3	107.3	107.7	107.7	106.8
	1971	107.7	107.7	112.8	113.6	113.6	113.6	113.6	113.6	113.6	115.2	110.8	114.9	112.6
	1972	114.9	113.6	116.0	116.7	121.6	121.6	121.6	121.6	121.6	121.6	121.6	121.6	119.5
	1973	121.6	121.3	125.8	126.6	126.9	126.9	127.1	129.8	132.0	132.9	136.7	144.9	129.4
	1974	146.6	155.0	172.5	189.1	199.8	201.6	206.9	207.9	207.9	207.9	208.0	204.6	
12 2910 042														
Plates, 100" and under in width — Tôle forte de 100 po. ou moins en largeur.	1970	112.7	112.7	112.7	112.7	112.7	112.7	112.7	112.7	112.7	112.7	112.7	116.8	113.0
	1971	116.8	116.8	116.8	116.8	116.8	116.8	116.9	116.9	116.9	116.9	123.6	123.6	118.0
	1972	123.6	123.5	123.5	123.5	123.5	123.5	123.5	123.5	123.5	129.6	129.6	129.6	125.0
	1973	129.6	129.6	129.6	129.6	129.6	134.9	135.5	135.5	135.5	135.5	135.5	135.5	133.0

- (1) Indexes for 1972, 1973 and 1974 are subject to revision. - Les indices pour 1972, 1973 et 1974 sont sujets à révision.
- (2) This industry was changed in commodity content, price sample and weights in accordance with significant changes within the industry. Figures are revised from January 1971 to date. - La composition en marchandises, les échantillons de prix et les mesures de poids ont changé dans cette industrie conformément à des changements importants survenus dans l'industrie même. Les chiffres sont révisés de janvier 1971 à aujourd'hui.
- (3) Effective January 1973 changes have been made in the calculation of this index. For details see page 88. - À compter de janvier 1973, on a modifié le calcul de cet indice. Pour plus de détails, voir la page 88.
- (4) An extensive revision of the weight and price sample (including the incorporation of goods purchased and resold in same condition as purchased) necessitated by developments in the industry's production pattern since 1961 have resulted in the introduction of new price indexes and a discontinuity in the industry price index. - Une révision approfondie de l'échantillon des pondérations et des prix (y compris l'intégration des biens achetés et revendus sans aucune modification), nécessitée par l'évolution du régime de production de l'industrie depuis 1961, a amené l'adoption de nouveaux indices des prix ainsi qu'une solution de continuité dans l'indice des prix industriels.

	Old Series	New series
	Ancienne série	Nouvelle série
December - 1970 - Décembre	95.1	92.3
January - 1971 - Janvier	95.1	92.1
Average - 1971 - Moyenne	95.2	91.8

- (5) This series has been revised from January 1969 forward. An expanded list of establishments and commodities has been selected and prices for these have been aggregated to a total industry index using 1971 shipments data. The price quotations are, in general, of an improved quality. Selected commodity data on a 1971 time and weight base, are available on request. - Les chiffres de cette série ont été révisés à partir de janvier 1969. Une liste augmentée des établissements et des produits a été établie, et les prix de ces produits ont été agrégés pour former un indice total de l'activité économique à partir des données sur les livraisons de 1971. De manière générale, le calcul des prix est plus fiable. Les utilisateurs peuvent obtenir sur demande des données sur certain produits utilisant les facteurs de pondération de 1971 et dont la période de référence est 1971.
- (6) Motor gasoline prices are 'List' and may not be a reflection of actual transaction prices. - Les prix de l'essence sont des prix de détail suggérés et peuvent ne pas traduire les prix réels à la transaction.
- (7) Gross weighted, including inter-industry shipments. For explanation see page 88. - Indice pondéré brut comprenant les livraisons inter-industrielles. Pour toute explication voir page 88.

ALL-ITEMS Consumer Price Index Converted to 1949=100 - December 1974 - L'indice des prix à la consommation de tous les éléments converti à 1949=100 - Décembre 1974 227.1

(1) Indexes prior to May 1973 incorporate 1957 expenditure weights, those for May 1973 forward are based on 1967 expenditures. The revised series is linked to its predecessor at April 1973. For further explanation, see page 92. - Avant mai 1973 les indices étaient calculés à l'aide des pondérations fondées sur les dépenses de 1957; à partir de mai 1973 ils sont calculés à l'aide des pondérations fondées sur les dépenses de 1967. Les séries révisées sont raccordées aux précédentes en avril 1973. Pour plus de renseignements, voir page 92.

Transportation services - Transports	203.5	201.1	183.3	182.2	194.5	179.2	174.8

(1) Indexes prior to May 1973 incorporate 1957 expenditures weights, those for May 1973 forward are based on 1967 expenditures. The revised series is linked to its predecessor at April 1973. For further explanation see page 92. - Avant mai 1973 les indices étaient calculés à l'aide des pondérations fondées sur les dépenses de 1957; à partir de mai 1973 ils sont calculés à l'aide des pondérations fondées sur les dépenses de 1967. Les séries révisées sont raccordées aux précédentes en avril 1973. Pour plus de renseignements, voir page 92.

(2) Excludes accessories and notions. - Ne comprend pas les accessoires et menus articles.

(3) Includes clothing accessories and notions. - Comprend les accessoires et menus articles vestimentaires.

(4) Includes constant weighted food component. - Comprend l'élément aliments calculé à l'aide de pondérations constantes.

TABLE 11. Consumer Price Indexes, Regional Cities(1)

TABLEAU 11. Indices des prix à la consommation, agglomérations urbaines(1)

1961=100

Note: (i) These indexes measure within each city the percentage change in consumer prices from the base period to the subsequent time periods. They cannot be used to compare levels of prices between cities. (ii) For inter-city indexes of retail price differentials refer to Table 14. - **Nota:** (i) Les indices mesurent dans chaque ville le pourcentage de variation des prix à la consommation depuis la période de base jusqu'à des périodes subséquentes. Ils ne peuvent servir à comparer les niveaux des prix d'une ville à l'autre. (ii) Pour les indices comparatifs des prix de détail, se reporter au tableau 14.

(1) Indexes prior to May 1973 incorporate 1957 expenditure weights, those for May 1973 forward are based on 1967 expenditure. The revised series is linked to its predecessor at April 1973. For further explanation, see page 92. - Avant mai 1973 les indices étaient calculés à l'aide des pondérations fondées sur les dépenses de 1957; à partir de mai 1973 ils sont calculés à l'aide des pondérations fondées sur les dépenses de 1967. Les séries révisées sont raccordées aux précédentes en avril 1973. Pour plus de renseignements, voir page 92.

(2) Until April 1973, the shelter element of regional cities' housing indexes moved on the basis of changes in rents only. However, from May 1973 on, homeownership has been included in the shelter element of regional cities' housing indexes, so that the Canada and regional city shelter indexes now contain the same elements. See also page 93. - Jusqu'en avril 1973, l'élément logement des indices de l'habitation des agglomérations urbaines était basé uniquement sur les variations des loyers. Toutefois, depuis mai 1973, les frais de possession d'une maison ont été incorporés à l'élément logement des indices de l'habitation des agglomérations urbaines; il en résulte que les indices du logement pour le Canada et pour les agglomérations urbaines comportent maintenant les mêmes éléments. Voir aussi la page 93.

(3) Includes shelter and household operation. Until April 1973, the shelter element of regional cities' housing indexes moved on the basis of changes in rents only. However, from May 1973 on, homeownership has been included in the shelter element of regional cities' housing indexes, so that the Canada and regional city shelter indexes now contain the same elements. See also page 93. - Comprend le logement et l'entretien du ménage. Jusqu'en avril 1973, l'élément logement des indices de l'habitation des agglomérations urbaines était basé uniquement sur les variations des loyers. Toutefois, depuis mai 1973, les frais de possession d'une maison ont été incorporés à l'élément logement des indices de l'habitation des agglomérations urbaines; il en résulte que les indices du logement pour le Canada et pour les agglomérations urbaines comportent maintenant les mêmes éléments. Voir aussi la page 93.

(1) Indexes prior to May 1973 incorporate 1964 expenditure weights, those for May 1973 forward are based on 1967 expenditures. The revised series is linked to its predecessor at April 1973. For further explanation, see page 92. - Avant mai 1973 les indices étaient calculés à l'aide des pondérations fondées sur les dépenses de 1964; à partir de mai 1973 ils sont calculés à l'aide des pondérations fondées sur les dépenses de 1967. Les séries révisées sont raccordées aux précédentes en avril 1973. Pour plus de renseignements, voir page 92.

(2) Includes shelter and household operation. Until April 1973, the shelter element of regional cities housing indexes moved on the basis of changes in rents only. However, from May 1973 on, homeownership has been included in the shelter element of regional cities' housing indexes, so that the Canada and regional city shelter indexes now contain the same elements. See also page 93. - Comprend le logement et l'entretien du ménage. Jusqu'en avril 1973, l'élément logement des indices de l'habitation des agglomérations urbaines était basé uniquement sur les variations des loyers. Toutefois, depuis mai 1973, les frais de possession d'une maison ont été incorporés à l'élément logement des indices de l'habitation des agglomérations urbaines; il en résulte que les indices du logement pour le Canada et pour les agglomérations urbaines comportent maintenant les mêmes éléments. Voir aussi la page 93.

- (1) Indexes for 1974 are subject to revision. - Les indices pour 1974 sont sujets à révision.
(2) From Table 18. For explanation of recent revisions see Vol 1, No. 7 of Construction Price Statistics, Service Bulletin 62-006. - Du tableau 18. Pour une explication des récentes révisions voir Vol 1, No. 7 du bulletin de service "Statistique des prix dans la construction" 62-006.
(3) National Income and Expenditure Accounts, Catalogue 13-001, quarterly. - (No. 13-001 au catalogue, trimestriel).
(4) Indexes for 1973 and 1974 are subject to revision. - Les indices pour 1973 et 1974 sont sujets à révision.
(5) From Table 19. For explanation of recent revisions see Vol 1, No. 10 of Construction Price Statistics, Service Bulletin 62-006. - Du tableau 19. Pour une explication des récentes révisions voir Vol 1, No. 10 du bulletin de service "Statistique des prix dans la construction" 62-006.
(6) This series contains an engineering component as well as a building component, and is therefore not precisely comparable in coverage with the non-residential composite index. The implicit price indexes are adjusted for changes in contractors profit and productivity. - Cette série comprend une composante génie aussi bien qu'une composante construction: elle n'a donc pas tout à fait la même portée que l'indice synthétique pour la construction non-résidentielle. Les indices synthétiques sont corrigés des variations des profits et de la productivité des entrepreneurs.

(1) To assist comparison with other published series the indexes presented have been arithmetically converted from 1956=100 to 1961=100. The 1956=100 indexes are available on request. - Pour faciliter la comparaison avec d'autres séries publiées, ces indices ont été recalculés sur la base 1961=100. Les indices originaux (1956=100) sont disponibles.

(2) The years refer to fiscal years. Thus 1961 refers to the period April 1, 1961 to March 31, 1962. - Années financières; par exemple, 1961 couvre la période du 1er avril 1961 au 31 mars 1962.

(3) Major components for the provincial indexes are presented annually in Construction Price Statistics, Service Bulletin No. 62-006. - Les principaux éléments des indices pour les provinces sont publiés annuellement dans le bulletin de service, Statistiques des Prix dans la Construction, no 62-006.

(4) Direct comparisons should not be made between this index and the highway index published by the Ontario Department of Transportation & Communications. The item content of the indexes is different. - On ne peut comparer directement cet indice avec celui de la voirie publié par le Département du transport et des communications de l'Ontario. Les éléments des deux indices sont différents.

Equipment - Matériel	115.1	106.7	106.1	119.4	124.8	123.5	127.7	
Hydro-electric generating stations(4) - Centrales d'énergie hydro-électrique(4)	126.5	131.6	139.5	148.3	155.2	164.8	176.5	

(1) Major components for the provincial indexes are presented annually in Construction Price Statistics, Service bulletin, 62-006. - Les principaux éléments des indices pour les provinces sont publiés annuellement dans le bulletin de service, Statistiques des prix dans la construction, no 62-006 au catalogue.

(2) The years refer to fiscal years. Thus 1961 refers to the period April 1, 1961 to March 31, 1962. - Années financières, par exemple, 1961 couvre la période du 1er avril 1961 au 31 mars 1962.

(3) For further detailed explanation see occasional paper 62-526. - Pour plus de renseignements, voir le bulletin hors série No 62-526 au catalogue.

(4) For further detailed explanation see occasional paper 62-533. - Pour plus de renseignements, voir le bulletin hors série No 62-533 au catalogue.

TABLE 27. Price Indexes for Machinery and Equipment
TABLEAU 27. Indices des prix des machines et du matériel

	Implicit price index (business gross fixed capital formation)(1)	Construction machinery and equipment - Machines et matériel de construction		Forestry East of the Rockies - Forestier à l'est des Rocheuses
	Indices implicites de prix (formation brute de capital fixe)(1)	Arithmetically converted to - Arithmétiquement converti à		
	1961=100	1961=100	1968=100(2)	1968=100(3)
1962	103.3	105.6	82.6	
1963	106.1	108.4	84.8

Explanation of Methods Used and Additional Sources for Price Series

Industrial Price Indexes

Industry Selling Price Indexes (1961 = 100)

Industry selling price indexes are published for approximately 100 industries within manufacturing. Also published are approximately 425 commodity price indexes for the products of these industries. The Classification system is that of the 1960 standard industrial classification, thus permitting the joint use of price statistics with other data such as production and employment similarly classified.

The data upon which both the initial selection of commodities to be priced and responding firms are made are contained in the Census of Manufacturers, a series of annual surveys collecting statistics on shipments of commodities, employment and materials used. Prices are collected on the 15th of each month or the nearest transaction date for the commodity being priced; sales and excise taxes are excluded.

The industry classified price indexes are useful for analysis of price movements, for estimation of the constant dollar value of shipments, and for purposes of contract escalations.

A complete description of these indexes is contained in: Industry Selling Price Indexes 1956-68, Catalogue 62-528.

Industry Selling Price Index: Manufacturing

The index is gross weighted. It measures the movements of prices of gross shipments of manufacturing industries, including inter-industry shipments between individual industries within manufacturing. Therefore, it duplicates the movements of some prices in the sense that, for example, flour prices are given full weight as part of the shipments of the Flour Mills Industry and then are implicitly counted again through full weighting of the shipment prices of those manufacturing industries which use flour as an ingredient in their outputs, e.g., bread, biscuits, cakes, etc.

"Iron & Steel Mills:" 12-2910

The principal change in the index is as follows: From January 1973 forward prices collected from the various companies are, for any given commodity, weighted together in a way that reflects the relative importance of each company's shipments of the commodity to the total shipments of that commodity by all companies in the year 1971. In addition prices for stainless products were deleted from the series bars hot rolled etc. (12-2910-082), in September 1972 and from the series sheets and strip cold rolled etc. (12-2910-084) in October 1972. Prices for stainless products, however, are included in the price index for the iron and steel mills industry.

The concept of price change measured is net return to mill.

Explication des méthodes utilisées et sources supplémentaires des séries de prix

Indices des prix industriels

Indices des prix de vente dans l'industrie (1961 = 100)

Les indices des prix de vente dans l'industrie sont publiés pour environ 100 industries manufacturières. Près de 425 indices des prix des produits de ces industries sont également publiés. Les produits sont classés d'après la Classification type des industries de 1960, ce qui permet d'utiliser la statistique des prix avec d'autres données telles que la production et l'emploi classées de la même manière.

Les données sur lesquelles se fonde le choix initial de produits dont il faut déterminer le prix et des établissements enquêtés figurent dans le "recensement des manufactures", série de bulletins sur les enquêtes annuelles au cours desquelles on recueille des statistiques sur les expéditions de produits, sur l'emploi et sur les matières utilisées. La collecte des prix a lieu le 15 de chaque mois ou à la date de transaction la plus rapprochée pour le produit en question; les taxes de vente et droits d'accise ne sont pas pris en compte.

Les indices des prix classés par industrie servent à analyser les mouvements de prix, à estimer la valeur des expéditions en dollars constants et à indexer les contrats.

La description complète de ces indices est donnée dans "Indices des prix de vente dans l'industrie, 1956-68", (n° 62-52 au catalogue).

Indices des prix de vente dans l'industrie: Industries manufacturières

Il s'agit d'un indice pondéré brut. Il mesure les mouvements du prix des livraisons brutes des industries manufacturières y compris les livraisons inter-industrielles des industries manufacturières. Il prend donc deux fois en compte les mouvements de certains prix: les prix de la farine, par exemple, font l'objet d'une pondération complète comme ayant trait aux livraisons de meuneries et ils sont comptés à nouveau implicitement du fait de la pondération complète des prix de livraisons des industries manufacturières qui utilisent de la farine comme ingrédient de leurs produits, tels que le pain, les biscuits ou les gâteaux.

"Sidérurgie:" 12-2910

Le principal changement apporté à l'indice est le suivant: depuis janvier 1973, les prix recueillis auprès des différentes sociétés sont, pour tout produit, pondérés de manière à refléter l'importance relative des livraisons de chaque société par rapport aux livraisons totales de ce produit par toutes les sociétés en 1971. En outre, les prix des produits en acier inoxydable ont été enlevés de la série "barres, laminés à chaud, etc." (12-2910-082) en septembre 1972 et de la série "tôles et feuillards, laminés à froid, etc." (12-2910-084) en octobre 1972. Ils sont toutefois compris dans l'indice des prix de l'industrie de la sidérurgie.

Le concept de la mesure de la variation des prix se fonde sur le revenu net à l'usine.

Purchase Price Indexes of Secondary Metals (1969=100)

Ferrous and non-ferrous indexes are compiled from a series of input prices, inclusive of transportation and brokerage fees, submitted by a wide variety of purchasers from selected industries. Indexes for certain categories of metals cannot be published because of the confidentiality of the data under the Statistics Act.

Canadian Farm Products Price Index (1935-39=100)

Prices of Western grains used in the index are Canadian Wheat Board buying prices for the grades listed below. Initial payments are first used in the index calculation and are revised as further payments are announced.

Final payments for the crop year August 1972 — July 1973 were announced on November 6, 1973 for wheat, oats and barley. The estimates of Final payments for the 1973-74 crop year are based on wheat Board predictions of April 1974.

Indices du prix d'achat des métaux de deuxième fusion (1969=100)

L'indice des métaux ferreux et non ferreux est établi à partir d'une série de prix comprenant les frais de transport et de dédouanement; ces données sont fournies par un large éventail de clients de certaines industries. Confidentiels en vertu de la Loi sur la statistique, les indices de certaines catégories de métaux ne peuvent être publiés.

Indice des prix des produits agricoles canadiens (1935-39=100)

Les prix des céréales de l'Ouest figurant dans l'indice représentent les prix à l'acheteur de la Commission canadienne du blé pour les catégories énumérées ci dessous. Les paiements initiaux servent d'abord au calcul de l'indice et sont ensuite révisés lorsque d'autres paiements sont annoncés.

Les prix définitifs pour la campagne allant d'août 1972 à juillet 1973 ont été annoncés le 6 novembre 1973, en ce qui concerne le blé, l'avoine et l'orge. Les estimations des paiements totaux pour la campagne agricole 1973-74 sont fondées sur les prévisions d'avril 1974 de la Commission canadienne du blé.

Used in original indexes from Aug. 1972 to July 1973. Utilisé dans les premiers indices d'août 1972 jusqu'en juillet 1973.
Incorporated retroactively in revised final indexes Aug. 1972 to July 1973. Inclus rétroactivement dans les indices finals révisés d'août 1972 à juillet 1973.
Used in current indexes. — Utilisé dans les indices courants.

General Wholesale Index (1935-39 = 100)

The General Wholesale Index is a commodity classified index of prices. The index is "general" inasmuch as it incorporates a diverse selection of both primary and processed commodities. It is called "wholesale" because its ingredient prices relate to that broad and heterogeneous area of commodity distribution which excludes only retail trade. In fact, the term "wholesale" has more of a connotation of bulk trading than of any homogeneous level of distribution. Thus, though the index mainly includes prices of producers, it also covers transactions of "middle men" who trade in commodities of a type or in quantities characteristic of primary marketing functions.

Though general wholesale price indexes have been calculated by many countries for years there is no precise answer to the question of what such an index measures. This is so because the index cannot be associated with any adequately definable value aggregate. Unlike a consumer price index which can be identified with expenditures of household consumers, a general wholesale index covers a host of overlapping transactions sometimes involving the same ingredient in as many as three different stages of processing. Yet, conceptually, it is not a measure of the purchasing power of money because it omits significant areas of monetary transactions such as prices of land, labour, securities and services, except in so far as prices of these things are implicit in commodity prices. As a conventional summary figure, its use has tended towards a reference level against which to observe the behaviour of particular price groups such as farm products, industrial materials, building materials and the various other groupings for which indexes are published. And as an indicator of general business conditions it is usually included in the group which is regarded as approximately coincident with the business cycle. However, its main attribute now lies in its long historical continuity.

For further details about the General Wholesale Index please consult: Wholesale Price Indexes 1913-50 (Reference Paper No. 24) Prices and Price Indexes 1949-52 (Vol. 23) (Catalogue 62-501).

Thirty Industrial Materials, (1935-39 = 100)

The price index of thirty industrial materials is calculated as an unweighted geometric average of prices of the selected commodities. The formula is as follows:

$$\sqrt[30]{\frac{p^1}{tN} \times \frac{p^2}{tN} \times \frac{p^3}{tN} \times \dots \times \frac{p^{30}}{tN}}$$

$$\sqrt[30]{\frac{p^1}{t \ 35-39} \times \frac{p^2}{t \ 35-39} \times \frac{p^3}{t \ 35-39} \times \dots \times \frac{p^{30}}{t \ 35-39}}$$

Indice général des prix de gros (1935-39 = 100)

L'indice général des prix de gros est un indice des prix classés par produit. Cet indice est "général" du fait qu'il comprend une variété de produits primaires et de produits transformés. Il est appelé "de gros" parce que les prix qui le composent se rapportent au domaine vaste et hétérogène de la distribution des produits dont seul le commerce de détail est exclu. En réalité l'expression "de gros" fait penser plus au commerce de gros qu'au niveau homogène de distribution. Bien que l'indice comprenne surtout les prix établis par les producteurs, il englobe également les transactions des "intermédiaires" qui vendent des produits dont le genre et la qualité sont particuliers aux fonctions premières de la commercialisation.

De nombreux pays calculent l'indice général des prix de gros depuis des années; il n'en reste pas moins impossible de dire exactement ce que cet indice mesure, car on ne peut l'associer à une valeur globale que l'on puisse définir exactement. Contrairement à l'indice des prix à la consommation que l'on peut identifier grâce aux dépenses des ménages, l'indice général des prix de gros couvre une foule de transactions à double emploi impliquant parfois le même élément considéré jusqu'à trois étapes différentes de la transformation. Cependant, du point de vue conceptuel, cet indice ne constitue pas une mesure du pouvoir d'achat du dollar parce qu'il ne tient pas compte de transactions monétaires aussi importantes que le prix du terrain, du travail, des valeurs mobilières et des services, sauf si elles sont comprises dans le prix des produits. En tant que chiffre représentatif classique, on a eu tendance à s'en servir pour comparer le comportement de certains groupes de prix, par exemple, celui des produits agricoles, des matières industrielles, des matériaux de construction et de divers autres groupes pour lesquels on publie des indices. Comme indicateur de la situation générale du commerce, l'indice est habituellement intégré au groupe dont on considère qu'il correspond le plus exactement au cycle commercial. Sa qualité principale réside cependant dans sa longue continuité chronologique.

Pour plus de détails sur l'indice général des prix de gros, consulter *Wholesale Price Indexes 1913-50* (Reference Paper No. 24) et *Prices and Price Indexes 1949-52* (Vol. 23) (n° 62-501 au catalogue).

Indice des prix de trente matières industrielles (1935-39 = 100)

L'Indice des prix de trente matières industrielles est calculé comme moyenne géométrique non pondérée des prix de certaines marchandises. La formule est la suivante:

$$\sqrt[30]{\frac{p^1}{tN} \times \frac{p^2}{tN} \times \frac{p^3}{tN} \times \dots \times \frac{p^{30}}{tN}}$$

$$\sqrt[30]{\frac{p^1}{t \ 35-39} \times \frac{p^2}{t \ 35-39} \times \frac{p^3}{t \ 35-39} \times \dots \times \frac{p^{30}}{t \ 35-39}}$$

The selection of materials for pricing relates to groups such as "stable" prices, numbering 12, food prices, numbering 5 and "sensitive" prices, numbering 13. We plan to construct an index of industrial prices that will relate to current usage of materials and that will be of the more traditional Laspeyre's type in its construction. The presently published index contains prices for some materials that no longer constitute important industrial inputs.

The Consumer Price Index for Canada (1961 = 100)

The Consumer Price Index measures the percentage change through time in the cost of purchasing a constant "basket" of goods and services representing the purchases by a particular population group in a specified time period. The "basket" is an unchanging or equivalent quantity and quality of goods and services, consisting of items for which there are continually measurable market prices over time.

The index relates to a broad but specific group of urban families and reflects the price changes experienced by that "target group". The index may not represent closely the experience of any one specific family within the group, nor would it be expected to reflect price change for other population groups for which income, family size and place of residence are characteristically different. The target group to which the current index relates is composed of families — (a) living in cities with over 30,000 population, (b) ranging in size from two to six persons and (c) with annual incomes in 1967 ranging from \$4,000 to \$12,000. To measure the influences of price change on the cost of goods and services purchased by such families, the Consumer Price Index reflects movements of some 300 items.

The history of consumer price indexes in Canada tends back to the early 1900's and encompasses periodic revisions of index base reference periods and weighting patterns. In January 1969, the time base was updated to 1961 = 100 from 1949 = 100; details are contained in the January 1969 issue of the monthly publication *Prices and Price Indexes*, Catalogue 62-002.

From March 1961 to April 1973 inclusive, the weights and relative importance of the items in the Consumer Price Index were based on 1957 family expenditure patterns; details of these weights can be found in *The Consumer Price Index for Canada (1949 = 100) (Revision Based on 1957 Expenditures)*, Catalogue 62-518. A subsequent weight revision to reflect 1967 family expenditure patterns (and within the food component, 1969 detailed spending habits) was introduced in May 1973. Full details of the latest weighting pattern and other background information on the Consumer Price Index is available in the occasional paper *The Consumer Price Index for Canada (1961 = 100) (Revision Based on 1967 Expenditures)*, Catalogue 62-539.

Le choix des matières servant au prélèvement des prix et se rapportant à des groupes tels que prix "stables", (12 matières), prix des aliments (5 matières) et prix "variables" (13 matières). Nous projetons d'établir un indice des prix industriels qui se rapportera à l'utilisation courante des matières et dont la structure se rapprochera plus du type Laspeyres plus traditionnel. L'indice publié ici renferme les prix de certaines matières qui ne sont plus considérées comme intrants importants dans l'industrie.

L'indice des prix à la consommation pour le Canada (1961 = 100)

L'indice des prix à la consommation mesure le taux de variation dans le temps du coût à l'achat d'un "panier" constant de biens et de services représentant les achats d'un groupe déterminé de la population au cours d'une période donnée. Le "panier" est constitué par des biens et des services en quantité et de qualité constantes; il comprend uniquement les biens et services qui ont un prix et dont les prix peuvent être observés de façon continue.

L'indice se rapporte à un groupe vaste, mais délimité, de familles urbaines et rend compte des changements de prix auxquels ce "groupe cible" doit faire face. L'indice peut ne pas suivre de près les changements de prix touchant une famille en particulier de ce groupe, pas plus que les changements de prix touchant d'autres groupes de la population dont le revenu, la taille des familles ou les lieux de résidence diffèrent sensiblement. Le groupe cible auquel se rapporte l'indice actuel se compose de familles a) vivant dans des villes de plus de 30,000 habitants, b) dont la taille est comprise entre deux et six personnes, et c) dont les revenus annuels en 1967 étaient compris entre \$4,000 et \$12,000. Afin de mesurer les effets de changements de prix sur le coût des biens et des services achetés par ces familles, l'indice des prix à la consommation suit les mouvements de quelque 300 articles.

L'histoire des indices de prix à la consommation au Canada remonte au début des années 1900, et elle comprend des révisions périodiques des périodes de référence de base de l'indice ainsi que des schémas de pondération. En janvier 1969, on a aligné la base de temps de 1949 = 100 à 1961 = 100; d'autres renseignements figurent dans l'édition de janvier 1969 de la publication mensuelle *Prix et indices des prix* (n° 62-002 au catalogue).

De mars 1961 à avril 1973 inclusivement, les poids, ou l'importance relative des éléments de l'indice des prix à la consommation étaient basés sur les tendances de dépense des familles pour 1957; on peut trouver le détail de ces poids dans la publication *The Consumer Price Index for Canada (1949 = 100) (Revision based on 1957 Expenditure)*, (n° 62-518 au catalogue). En mai 1973, on a introduit une nouvelle révision des poids afin de prendre en compte les tendances de consommation des familles en 1967 (et, dans l'élément aliments, les habitudes détaillées de dépense en 1969). Le détail complet du dernier schéma de pondération et d'autres renseignements fondamentaux sur l'indice des prix à la consommation figurent dans la publication hors série *L'indice des prix à la consommation du Canada (1961 = 100) (Révision fondée sur les dépenses de 1967)*, (n° 62-539 au catalogue).

The Consumer Price Index for Canada Reclassified by Goods and Services

A revised supplementary classification system, entitled "The Consumer Price Index Reclassified by Goods and Services", was introduced in May 1973 with the revision of the weighting pattern of the Consumer Price Index to reflect 1967 expenditures.

This supplementary classification introduces an improved framework for regrouping the items which comprise the Index. In it, all items in the C.P.I. have been reclassified into two major categories — goods and services — according to their most characteristic or dominant attribute. The goods component has been sub-divided into three categories: durable, semi-durable, and non-durable goods, according to expected average useful lifetime criteria. Services, on the other hand, have been sub-divided according to broad functional categories.

Historical series conforming to the revised classification system replace the previously published supplementary indexes and are available, with explanatory notes, for the period January 1961 to April 1973 inclusive, in *Retail Prices and Living Costs Service Bulletin*, Catalogue 62-005, Vol. 2 No. 7.

Consumer Price Indexes for Regional Cities (1961 = 100)

Consumer Price Indexes for Regional Cities are published monthly in this bulletin (Table 11). Except for their individual weighting systems, and the fact that they are based on fewer quotations, the regional city indexes are generally similar in concept and item coverage to the Consumer Price Index for Canada.

Prior to May 1973, the city indexes may have underestimated the degree of price movements occurring because the shelter component of the city indexes moved on the basis of changes in rents only, whereas changes in both rents and homeownership costs were, and continue to be, included in the Canada index. As a result of homeownership costs having increased more rapidly than rents, the housing and the all-items indexes for cities tended to underestimate somewhat the rates of price increase particularly over longer periods. From May 1973 forward, however, homeownership costs are included in the regional city consumer price indexes so that the Canada and the regional city indexes are consistent in terms of their content and treatment.

Each city index is designed to measure the influence of changes in retail prices taking place in the locality specified, upon the cost of a fixed basket of goods and services representing the level of consumption of a representative group of families in the particular area specified.

In using the city indexes, it should be remembered that *they do not in any way indicate whether price levels are higher or lower in one city than in another*. Rather, they measure, *within each city*, the percentage change in consumer prices from the base period to subsequent time periods.

L'indice des prix à la consommation au Canada reclassé par biens et services

Un système révisé de classification supplémentaire, intitulé "L'indice des prix à la consommation au Canada reclassé par biens et services", a été introduit en mai 1973 en même temps que la révision des schémas de pondération de l'indice des prix à la consommation afin de rendre compte des dépenses de 1967.

Cette classification supplémentaire regroupe dans un cadre amélioré les éléments de l'indice. En effet, tous les éléments de l'I.P.C. ont été reclassés dans deux grandes catégories, soit la catégorie des biens et celle des services, suivant leur caractère le plus distinctif ou dominant. La catégorie des biens présente trois sous-catégories (biens durables, biens semi-durables, biens non durables) déterminées en fonction de la vie utile moyenne prévisible. D'autre part, on a réparti les services suivant quelques grandes catégories fonctionnelles.

Les séries historiques conformes au système révisé de classification remplacent les indices supplémentaires publiés auparavant, et on peut les trouver, avec des notes explicatives, pour la période janvier 1961-avril 1973, dans la publication "Prix de détail et coût de la vie" - Bulletin de service, n° 62-005 au catalogue, vol. 2 no 7.

Indices des prix de la consommation dans certaines agglomérations urbaines (1961 = 100)

Ces indices sont publiés tous les mois dans la présente publication (Tableau 11). À l'exception de leurs systèmes de pondération particuliers, et de ce qu'ils font appel à moins de prix, ces indices sont en général semblables par leur concept et par les éléments qui les composent à l'indice des prix à la consommation au Canada.

Avant mai 1973, les indices des agglomérations ont pu sous-estimer le degré de changement des prix, parce que l'élément logement des indices des agglomérations ne variait qu'en fonction de l'évolution des loyers, tandis que l'indice pour le Canada comprenait et ne comprend toujours que les changements de loyers et les coûts de propriété. Comme les coûts de propriété ont augmenté plus vite que les loyers, les indices du logement et l'ensemble pour les villes tendent à sous-estimer quelque peu le taux de croissance des prix, principalement sur des périodes plus longues. À partir de mai 1973, cependant, les coûts de propriété sont inclus dans les indices de prix à la consommation des agglomérations urbaines, de sorte que les indices pour le Canada et les agglomérations urbaines sont homogènes à la fois pour leur contenu et de leur traitement.

Chaque indice de ville est conçu de manière à mesurer l'effet des changements des prix de détail dans la ville en question sur les prix d'un panier constant de biens et de services représentant le niveau de consommation d'un groupe représentatif de familles dans cette ville.

Le lecteur devra toujours garder en mémoire que ces indices *n'indiquent en aucune façon si les prix sont plus élevés dans une ville que dans une autre*. Ils mesurent plutôt *dans chaque ville* le taux de variation des prix à la consommation à partir de la période de base et des périodes subséquentes.

For comparisons of retail price differentials between cities, see Table 14 of this publication and the relevant explanatory notes.

Purchasing Power of the 1961 Consumer Dollar

As consumer prices rise, the sum of money required to purchase an unchanging or equivalent quantity and quality of goods and services increases, and the amount of these items that can be purchased with a fixed sum of money decreases. Conversely, as prices fall, the amount of goods and services that can be purchased with a fixed sum of money increases. Thus, rising prices are associated with declining purchasing power of money and falling prices are associated with its increasing purchasing power.

The purchasing power of the consumer dollar, in other words, bears an inverse relationship to the movement of the Consumer Price Index. For example, by January 1973, consumer prices measured by the C.P.I. were 44.5% higher, so that an equivalent basket of goods and services which could be purchased for \$100.00 in 1961 would cost the consumer \$144.50 in January 1973. Each consumer dollar in January 1973, therefore, buys less than in 1961, and the amount of its reduced value can be expressed in terms of the inverse consumer price movement. Thus, in January 1973 the purchasing power of the 1961 consumer dollar declined to approximately 69 cents ($\$1.00 \times 100.0/144.5 = \0.69).

Users of the tabulation which shows the purchasing power of the 1961 consumer dollar at different points in time (Table 12) should note that, as in the case of the Consumer Price Index from which it is derived, it may not represent solely the experience of any one specific family within the age group to which the C.P.I. relates; nor should it be expected to reflect the experience of other population groups whose income, family size and place of residence are characteristically different. It should also be noted that, like the C.P.I., it is not directly affected by changes in income tax, employment insurance premiums and certain other security payments.

Measuring the Purchasing Power of Wages

Changing consumer price levels affect the amounts of consumer goods and services which a dollar will buy, and average wages, insofar as they are spent on such items will, of course, be affected in the same way. A wage measurement which takes the change of consumer prices into account, can be calculated by reducing actual average wages by the percentage rise in consumer price levels, or increasing them if the amount price levels fall. Wages thus adjusted may be used to indicate the comparative purchasing power of average earnings if consumer price levels and consumption patterns had remained constant. The following illustration shows how this kind of an adjustment can be made.

Suppose that a series of average weekly wages rises from \$80.00 in week A to \$100.00 in week B, and that in the same interval a consumer price index advances from 100 to 110. Because of the 10% rise in consumer prices, \$1.00 will buy as much in week B as it would in week A. On the

Pour étudier les différences de prix de détail entre les villes, il faut consulter le tableau 14 de la présente publication et les notes explicatives qui l'accompagnent.

Pouvoir d'achat du dollar de consommation 1961

À mesure que les prix à la consommation montent, la somme nécessaire à l'achat d'une quantité et d'une qualité constantes ou équivalentes de biens et de services augmente, et la quantité de ces articles qui peut être achetée avec une somme d'argent fixe diminue. Inversement, à mesure que les prix baissent, la quantité de biens et de services qui peut être achetée avec une somme d'argent constante augmente. Ainsi, la hausse des prix est liée à la baisse du pouvoir d'achat de la monnaie, et la baisse des prix est liée à la hausse du pouvoir d'achat.

Le pouvoir d'achat du dollar de consommation, en d'autres termes, évolue en raison inverse du mouvement de l'indice des prix à la consommation. Ainsi, en janvier 1973, par rapport au niveau de 1961, les prix à la consommation mesurés par l'I.P.C. avaient progressé de 44.5%, de sorte qu'un panier équivalent de biens et de services qui coûtait \$100 à l'achat en 1961 aurait coûté \$144.50 en janvier 1973 au consommateur. Par conséquent, chaque dollar de consommation en janvier 1973 achète moins qu'en 1961, et l'on peut exprimer le montant de sa valeur réduite en fonction de l'inverse du mouvement des prix à la consommation. Ainsi, en janvier 1973, le pouvoir d'achat du dollar de consommation 1961 était tombé approximativement à 69 cents ($\$1.00 \times 100.0/144.5 = \0.69).

Les utilisateurs du tableau qui indique le pouvoir d'achat du dollar de consommation de 1961 à différentes périodes (Tableau 12) doivent noter que, comme dans le cas de l'indice des prix à la consommation dont il a été tiré, il peut ne pas suivre de près le cas d'une famille en particulier faisant partie du grand groupe auquel se rapporte l'I.P.C., pas plus qu'il ne rend nécessairement compte des dépenses d'autres groupes de la population dont les revenus, la taille des familles et les lieux de résidence diffèrent sensiblement. Il faut également noter que, tout comme l'I.P.C., il n'est pas touché directement par les changements de l'impôt sur le revenu, les primes d'assurance-chômage et certains autres paiements d'assistance.

Mesure du pouvoir d'achat des salaires

Les changements du niveau des prix à la consommation affectent les quantités de biens et de services de consommation qu'un dollar peut acheter, et les salaires moyens, dans la mesure où ils sont consacrés à de tels articles, seront naturellement touchés de la même façon. Une mesure des salaires qui prendrait en compte les changements de prix à la consommation peut se calculer en réduisant les salaires moyens réels du taux d'accroissement des prix à la consommation, ou en les augmentant dans une proportion égale à la baisse des prix. Les salaires ainsi ajustés peuvent servir à indiquer le pouvoir d'achat comparatif des gains moyens si les prix à la consommation et les tendances de consommation étaient restés constants. L'exemple suivant montre comment on peut procéder à un ajustement de cette nature.

Supposons qu'une série de salaires hebdomadaires moyens passe de \$80 pendant la semaine A à \$100 au cours de la semaine B, et qu'au cours de la même période un indice des prix à la consommation passe de 100 à 110. Par suite de la hausse de 10% des prix à la consommation, \$1 n'achètera pas autant au cours de

other hand, the 25% rise from \$80.00 to \$100.00 will overstate the increase which has occurred in the purchasing power of average weekly wages. This overstatement can be removed by reducing the figure of \$100.00 by the amount of the consumer price index increase. The adjusted average is \$90.91 $((100.0/110.0) \times \$100)$, which may be referred to as a weekly wage average for week B expressed in the dollars of period A; or it may be said to indicate the level of real weekly wages relative to week A.

The foregoing calculation can be carried a step further to express, in index number form, the relationship between the week A average of \$80.00 and the week B adjusted figure of \$90.91. Assuming the week A average of \$80.00 as an index equal to 100, the week B index becomes 113.6 $((90.91/80.00) \times 100)$. Such an index may be called an index of average weekly real wages. It indicates that average wages for week B will buy 13.6% more goods and services than they did in week A, in spite of a 10% rise in consumer prices. This 13.6% increase in real wages compares with the 25% rise in money wages $((\$100.00 - \$80.00 / \$80.00) \times 100)$.

In Table 13, the index numbers of average weekly wages in manufacturing in current dollar terms (1961 = 100) are calculated by dividing the weekly wages in current dollars by the 1961 average weekly wage in current dollars and multiplying the result by one hundred. For example, the weekly wage index for September 1972 in current dollars (1961 = 100) is 196.4 $((146.23/74.45) \times 100)$. The weekly wages in 1961 dollar terms are determined by dividing the weekly wage in current dollars by the consumer price index for Canada for the month following the month to which the wages relate and multiplying the result by one hundred. Thus, the September 1972 weekly wage in 1961 dollars is \$102.98 $((146.23/142.0) \times 100)$. (The wage and the price data both refer to generally similar time periods: current wages for a particular month relate to the last pay periods in that month, while most prices for the consumer price index of the following month are collected in the first week of that month.)

The index numbers of weekly wages in 1961 dollar terms (1961 = 100) are determined by dividing the weekly wages in 1961 dollars by the base (1961) average weekly wage and multiplying the result by one hundred. For example, the September 1972 weekly wage index in 1961 dollar terms (1961 = 100) is 138.3 $((102.98/74.45) \times 100)$.

It should be noted that while the estimates of average real wages may reflect the experiences of broad groups of workers in manufacturing fairly well, their applicability to individual wage-earners depends upon a number of considerations. For example, individual earnings will differ significantly from the group average, depending upon occupation, industry, geographical location, or sex of the wage-earner. Moreover, individual spending habits differ widely, but the consumer price index which is used to adjust the earnings data refers only to the average consumption pattern of a particular population group. Group spending patterns change over periods of time. To the extent that this occurs, the wage data adjusted by the consumer price index (which has a "fixed" consumption pattern), will gradually be ren-

la semaine B qu'au cours de la semaine A. Par contre, la hausse de 25% (de \$80 à \$100) va surévaluer la hausse qui s'est produite dans le pouvoir d'achat des salaires hebdomadaires moyens. Cette surévaluation peut être réduite en réduisant le chiffre de \$100 du montant de l'accroissement de l'indice des prix à la consommation. La moyenne ajustée sera \$90.91 $((100.0/110.0) \times 100)$, et que l'on peut désigner comme étant la moyenne du salaire hebdomadaire pour la semaine B exprimée en dollars de la période A; on peut aussi dire qu'elle indique le niveau réel des salaires par rapport à la semaine A.

On peut pousser ce calcul plus loin, en exprimant à l'aide d'un indice, la relation entre le salaire moyen de \$80 de la semaine A, et le salaire révisé de \$90.91 de la semaine B. En supposant que la moyenne de la semaine A soit un indice égal à 100, l'indice de la semaine B devient 113.6 $((90.91/80.00) \times 100)$. On pourrait appeler un tel indice l'indice de la rémunération hebdomadaire effective. Il indique que le salaire moyen pour la semaine B permettra aux consommateurs d'acheter pour 13.6% de plus de biens et services que pendant la semaine A, et ceci, en dépit de l'augmentation de 10% des prix à la consommation. Cette augmentation effective de 13.6% se compare à l'augmentation de 25% des salaires $((\$100.00 - \$80.00 / \$80.00) \times 100)$.

Au Tableau 13, les nombres indices des salaires hebdomadaires moyens dans les industries manufacturières en dollars courants (1961 = 100) s'obtiennent en divisant les salaires hebdomadaires en dollars courants par le salaire hebdomadaire moyen de 1961 en dollars courants et en multipliant le résultat par cent. Ainsi, l'indice des salaires hebdomadaires pour septembre 1972 exprimés en dollars courants (1961 = 100) est 196.4 $((146.23/74.45) \times 100)$. Les salaires hebdomadaires en dollars de 1961 s'obtiennent en divisant les salaires hebdomadaires en dollars courants par l'indice des prix à la consommation pour le Canada pour le mois qui suit celui auquel se rapportent les salaires, et en multipliant le quotient par cent. Ainsi, le salaire hebdomadaire de septembre 1972 exprimé en dollars de 1961 est \$102.98 $((146.23/142.0) \times 100)$. (Les données sur les salaires et les prix portent en général sur des périodes semblables: les salaires courants d'un mois donné sont généralement ceux des dernières périodes de paie du mois, alors que la plupart des prix pour l'indice des prix à la consommation du mois suivant sont recueillis au cours de la première semaine de ce mois.)

Les nombres indices des salaires hebdomadaires en dollars de 1961 (1961 = 100) s'obtiennent en divisant les salaires hebdomadaires en dollars de 1961 par les salaires hebdomadaires moyens de l'année de base (1961) et en multipliant le quotient par cent. Ainsi, l'indice des salaires hebdomadaires pour septembre 1972, exprimés en dollars de 1961 (1961 = 100), sera 138.3 $((102.98/74.45) \times 100)$.

Il convient de souligner que, même si les estimations des salaires réels moyens résument assez bien la situation d'un large éventail de travailleurs dans les industries manufacturières, elles ne peuvent être appliquées aux individus sans quelques précautions. Ainsi, le revenu d'un salarié s'écartera sensiblement de la moyenne du groupe en fonction de sa profession, de l'industrie dans laquelle il travaille, de sa situation géographique ou de son sexe. De plus, les habitudes de consommation varient considérablement d'un individu à l'autre, alors que l'indice des prix à la consommation qui sert à redresser les données sur les gains porte uniquement sur la structure moyenne de consommation d'un groupe déterminé. De même, les habitudes de consommation changent avec le temps. Ainsi, les données sur les gains rajustées par l'indice des prix à la consommation (les habitudes de consom-

ered less valid; the consumer price index weighting pattern was last revised in May 1973, and prior to that, in 1961. Furthermore, some part of income may be saved, and it should be borne in mind that it is not appropriate to reduce savings to a constant dollar basis by using an index which reflects consumption patterns.

It should also be kept in mind that measures of change in real earnings calculated from averages of gross earnings may differ from changes in the purchasing power of "take-home" pay, due to such factors as changes in personal income tax and pay deductions for such things as social insurance and pension plans. Thus index numbers of real wages should not be interpreted as measuring fluctuations in the levels of consumption of wage-earners or wage-earners' families; they are intended to show only the trend in purchasing power of wages over the items covered by the price index, and in addition to the factors already mentioned, do not take into account other family income (including family allowances) or changes in the savings position of families.

The table in this report showing indexes of both actual (current dollar) and real (constant dollar) wages uses 1961 as a reference year. However, any reference period may be chosen as a base since percentage changes between any two periods will be the same regardless of the reference period selected.

Further information regarding Table 13 can be obtained from: Labour Division, Statistics Canada.

Inter-City Retail Price Comparisons

Statistics relating to differences in retail prices between Canadian cities were initially developed for food, and subsequently extended to cover such other elements of the family budget as clothing, transportation, household appliances, health and personal care, recreation, education, reading, and tobacco and alcohol. In all, inter-city price comparisons are drawn for commodities and services comprising nearly three-quarters of the budget on which the Consumer Price Index for Canada is currently based with the major omission being shelter (both rented and owned). While recognizing the importance of shelter differentials in an overall comparison of the general price level being countered by consumers in different urban centres, the problems inherent in drawing valid comparisons between cities are such as to require further research. Meanwhile, it is considered that, despite the absence of shelter differentials at the time, publication of retail price comparisons for other elements of the budget will go some distance towards serving the varied needs of users.

Table 14 presents the results of an updating of earlier retail price measurements to May 1971 and includes complete data on several cities. A fuller explanation of the study from which this table is derived is contained in the December 1968, November 1969 and April 1972 issues of *Prices and Price Indexes* (Statistics Canada, Catalogue no. 62-002).

mation étant supposées "fixes") perdront graduellement de leur valeur; le schéma de pondération de l'indice des prix à la consommation a été révisé pour la dernière fois en mai 1973, et avant cela, en 1961. De plus, il ne faut pas oublier qu'une partie du revenu peut être épargnée et qu'il serait faux de recalculer cette épargne en dollars constants à partir d'un indice qui se rapporte à des habitudes de consommation.

De même, il faut se rappeler que l'évaluation des variations des gains effectifs calculées à partir de moyennes effectives peut différer de l'évaluation des variations du pouvoir d'achat du revenu disponible en raison de facteurs tels que l'évolution de l'impôt sur le revenu des particuliers et des retenues destinées à l'assurance sociale, aux régimes de pensions, etc. Ainsi, l'indice de la rémunération effective ne sert pas à mesurer les variations des niveaux de consommation des salariés ou de leurs familles, mais plutôt à montrer les tendances du pouvoir d'achat des salariés par rapport aux articles contenus dans l'indice; enfin, l'indice ne prend pas en compte les autres revenus des familles (tels que les allocations familiales) ou les variations de l'épargne des familles.

La période de référence du tableau qui présente les salaires tant réels (en dollars courants) qu'effectifs (en dollars constants) prend pour base l'année 1961. En fait, on peut choisir n'importe quelle période de référence comme base, puisque les taux de variation entre deux périodes seront les mêmes quelle que soit la période de référence choisie.

On peut obtenir plus de renseignements sur le tableau 13 en s'adressant à la Division du travail, Statistique Canada.

Comparaisons entre les prix de détail d'une ville à l'autre

À l'origine, la statistique des différences entre les prix de détail d'une ville du Canada à l'autre a été mise au point pour l'alimentation; par la suite, on l'a étendue à d'autres postes du budget familial tels que l'habillement, les transports, l'entretien du ménage, la santé et les soins personnels, les loisirs, la formation et la lecture, et le tabac et l'alcool. Au total, les comparaisons d'une ville à l'autre portent sur des biens et des services constituant près des trois quarts du budget servant actuellement à construire l'indice des prix à la consommation au Canada, la seule grande omission étant le logement (location et frais de possession). Sans vouloir nier l'importance des différences en ce qui concerne le logement dans toute comparaison globale du niveau général des prix auxquels les consommateurs doivent faire face dans divers centres urbains, il faut bien dire que les problèmes que comporteraient l'établissement d'une comparaison valable d'une ville à l'autre sont tels qu'ils nécessitent plus de recherche. Entre-temps, on estime que malgré l'absence actuelle de données sur les dépenses de logement, la publication de comparaisons des prix de détail pour d'autres postes du budget permettra de faire de gros progrès en ce qui concerne la satisfaction des besoins variés des utilisateurs.

On trouvera au tableau 14 le résultat d'une mise à jour de mesures de prix de détail tirées précédemment jusqu'à mai 1971, ainsi que des données plus complètes sur plusieurs villes. Une explication plus détaillée de l'étude dont le tableau en question est tiré figure dans les livraisons de novembre 1968, novembre 1969, et avril 1972 de *Prix et indices des prix* (n° 62-002 au catalogue).

The original data base of this study was the wide range of retail price quotations collected in the course of production of the national and urban Consumer Price Indexes. In developing these spatial price comparisons, efforts were made to achieve comparability by equating qualities of goods and services and by matching types of retail outlets, as far as possible. Price relationships between pairs of cities were derived and subsequently converted to a common base of Winnipeg prices equalling 100 to facilitate comparisons over the whole range of cities. Except for foodstuffs and new passenger cars for which inter-city price differentials were derived directly from new comparisons based on May 1971 price data, the updating of these measurements of inter-city retail price differentials was accomplished by application of the relative movement of prices, at the item level in each city, over the intervening periods as derived from the relevant city consumer price indexes. These price relationships at the item level were aggregated on the basis of the Canada urban consumer spending pattern, rather than the patterns applicable to individual cities. While differences in spending patterns exist among cities, the magnitude of these differences in the cities covered is not such as to affect most of the spatial comparisons significantly. Because of the previously mentioned absence of shelter price relationships, which may be of considerable significance in any overall comparison of inter-urban retail price differentials, aggregative indexes beyond major budget groupings are not shown.

The weighting factors used to combine items to group and component levels in Table 14 are based on 1957 expenditures, and therefore will not be identical to the 1967 weights, introduced in May 1973, in Consumer Price Index tables.

It should be noted that the retail prices used in this comparison, being those faced by consumers, include sales and excise taxes as applicable. Variations between provinces in the scale of sales taxes imposed on a wide range of non-food commodities can be of significance in explaining inter-city price differentials for these items.

While these indexes have been expressed in terms of Winnipeg = 100, the selection of Winnipeg as the base city has no special significance, and the indexes may be expressed on the base of any of the individual cities included.

Farm Input Price Indexes (1961 = 100)

Farm Input Price Indexes measure, through time, changes in prices of commodities and services used in Canadian farming operations. The item content and weights are based on data from the 1958 Farm Income and Expenditure Survey, the most recent source of sufficiently detailed data. These data have been modified to reflect 1961 prices and conditions. Farm Input Price Indexes are calculated quarterly for Eastern, Western and all Canada on a 1961 = 100 time base.

Les premières données de base pour la présente étude ont été constituées par l'importante collection de prix de détail recueillie lors de la confection des indices nationaux et urbains de prix à la consommation. Au moment d'établir ces comparaisons géographiques de prix, on s'est efforcé d'assurer la comparabilité en prenant des biens et des services de qualité égale et en assortissant autant que possible les points de vente au détail par type. Les relations de prix entre paires de villes ont été calculées puis converties à la base commune des prix de Winnipeg = 100 afin de faciliter des comparaisons pour l'ensemble de toutes les villes. Sauf pour les denrées alimentaires et les voitures neuves pour lesquelles les différences de prix entre villes ont été tirées directement de nouvelles comparaisons fondées sur les données de mai 1971, la mise à jour de ces mesures des différences de prix de détail entre les villes a été assurée grâce à l'extension des mouvements relatifs de prix au niveau de chaque article dans chaque ville aux périodes observées selon le calcul établi à partir de l'indice de prix à la consommation pour la ville en question. Ces relations entre les prix au niveau de l'article ont été agrégées sur la base de habitudes de consommation du citoyen pour l'ensemble du Canada et non pas selon les habitudes de dépense applicables à des villes individuelles. Même s'il existe des différences dans les habitudes de dépense d'une ville à l'autre, l'importance de ces différences en ce qui concerne les villes dont il est question ici n'est pas suffisante pour influencer sensiblement sur la plupart des comparaisons géographiques. Du fait de l'absence des relations de prix en ce qui concerne le logement, dont il a déjà été question ci-dessus et qui pourrait avoir une importance considérable chaque fois que l'on voudrait tirer une comparaison globale entre les différences de prix à la consommation au détail d'une ville à l'autre, on ne trouvera ici aucun indice synthétique agrégé au-delà des principales composantes du budget.

Les facteurs de pondérations utilisés pour regrouper les articles en groupes et en éléments dans le Tableau 14 sont basés sur les dépenses de 1957; ils ne sont donc pas identiques aux pondérations de 1967 adoptées en mai 1973 dans les tableaux relatifs à l'indice des prix à la consommation.

Il faut remarquer que les prix de détail ayant servi à la présente comparaison sont ceux que doit payer le consommateur et comprennent donc les taxes de vente et les taxes d'accises qui peuvent s'appliquer. Les différences d'une province à l'autre entre les barèmes de taxe de vente imposés sur une grande variété de biens non alimentaires peuvent avoir une grande importance pour expliquer les différences de prix d'une ville à l'autre pour les articles en question.

Le fait que ces indices aient été exprimés en prenant Winnipeg = 100 ne signifie pas que le choix de Winnipeg comme ville de référence ait une signification particulière et les indices pourraient être exprimés sur la base de n'importe laquelle des villes qui y figurent.

Indices de prix des entrées dans l'agriculture (1961 = 100)

Les indices de prix des entrées dans l'agriculture mesurent l'évolution dans le temps du prix des produits et des services utilisés dans l'exploitation agricole au Canada. Les articles qui sont compris, ainsi que leurs poids, sont fondés sur l'enquête de 1958 sur les revenus et les dépenses des agriculteurs, qui constitue la source la plus récente dont les données soient suffisamment détaillées. Ces données ont été adaptées de manière à rendre compte des prix et des conditions constatées pour 1961. Les indices des prix des entrées dans l'agriculture sont calculés chaque trimestre pour l'Est, l'Ouest et l'ensemble du Canada sur la base 1961 = 100.

Farm Input Price Indexes replace one of the two major component indexes of the previously published series, Price Index Numbers of Commodities and Services Used by Farmers, 1935-39 = 100. The latter index was composed of a Farm Family Living Index and a Composite Index Exclusive of Living Component. The Farm Input Price Indexes replaces the Composite Index Exclusive of Living Component from 1961 forward.

A detailed description of concepts, methods and data sources is contained in the occasional paper, *Farm Input Price Indexes, 1961 = 100*, Catalogue No. 62-534, and is reproduced in the September 1971 issue of *Prices and Price Indexes*, Catalogue 62-002. The foregoing publications also contain total and component price indexes for Eastern, Western, and all Canada, from 1961 to and including the third quarter 1971.

Current price indexes will be published on a regular basis in the quarterly publication, *Farm Input Price Indexes, 1961 = 100*, Catalogue 62-004, and in the monthly publication *Prices and Price Indexes*, Catalogue 62-002.

The Farm Family Living component of the 1935-39 series has not been replaced by an updated counterparts, and publication has been suspended.

Security Price Indexes

Security price indexes measure through time the effect of price change on the value of a portfolio of stocks bought and held by a hypothetical investor (as opposed to the more speculative trader). The portfolio represents stocks of Canadian companies listed on Toronto and Montreal stock exchanges.

The number of shares held for each issue is in proportion to the total number of shares outstanding. Prices in the investor's mining and supplementary stock indexes are Thursday's closing quotations from the exchange (Montreal, Toronto, Vancouver or Calgary) with the highest volume for particular stock, as reported in the Daily Canadian Data Bank of the Financial Post Computer Services Department. For preferred stocks, prices are monthly weighted averages of the daily closing price in which weights are daily total volume. The price reference base for the indexes is the year 1956, and the indexes express prices as a percentage of price 1956, arithmetically converted to the 1961 = 100 base.

Revised indexes on the base 1956 = 100 were first presented in the June 1962 issue of this publication. The most important change in the revision of the indexes, apart from the shift in the price reference base, was the classification of stocks according to the Standard Industrial Classification. In the continuing major group Industrials, 4 sub-groups (Mining and Grains, Food and Allied Products, Machinery and Equipment, and Building Materials) were replaced by 8 new sub-groups (Foods, Printing and Publishing, Primary Metals, Metal Fabricating, Non-metallic Minerals, Chemicals, Construction and Retail Trade). The remaining 5 sub-groups of the former index, viz., Industrial Mines, Beverages, Textile and Clothing, Pulp and Paper, and Oils (renamed Petroleum) were continued. The major group utilities was contin-

Les indices des prix des entrées dans l'agriculture remplacent l'un des deux principaux éléments d'indices de la série précédente sur l'indice de prix des produits et services utilisés par les agriculteurs, (1935-39 = 100). Cet indice comprenait l'indice du coût de la vie pour les familles agricoles et l'indice synthétique sans le coût de la vie. Les indices des prix des entrées dans l'agriculture remplacent l'indice synthétique sans le coût de la vie à partir de 1961.

Le bulletin hors série *Farm Input Price Indexes, 1961 = 100* (no 62-534 au catalogue) contient une description détaillée des concepts, des méthodes et des sources de données qui est reprise dans *Prices and Price Indexes* de septembre 1971 (n° 62-002 au catalogue). Ces deux bulletins contiennent également les indices des prix totaux et partiels pour l'Est et l'Ouest du Canada et pour l'ensemble du Canada, de 1961 au troisième trimestre de 1971 inclusivement.

Les indices des prix en cours seront publiés régulièrement dans le bulletin trimestriel *Farm Input Price Indexes, 1961 = 100* (n° 62-004) et dans le bulletin annuel *Prices and Price Indexes* (n° 62-002).

On n'a pas remplacé l'indice du coût de la vie pour la famille agricole des séries de 1935-39 par un équivalent à jour et on a cessé de la publier.

Indices des cours des valeurs mobilières

Les indices des cours des valeurs mobilières mesurent dans le temps l'incidence du mouvement des prix sur la valeur d'un portefeuille de titres achetés et détenus par un actionnaire hypothétique (par opposition au spéculateur). Le portefeuille comprend des actions de sociétés canadiennes cotées à la Bourse de Toronto et de Montréal.

Le nombre d'actions détenues pour chaque émission est proportionnel au nombre total d'actions en circulation. Les indices des prix des titres miniers et les indices supplémentaires sont les cours de fermeture de jeudi (Montréal, Toronto, Vancouver et Calgary) affichant le volume le plus élevé pour une valeur en particulier, d'après la Banque des données canadiennes quotidiennes du Service de l'informatique du *Financial Post*. Pour les actions privilégiées, les prix sont les moyennes pondérées mensuelles des cours de clôture de chaque jour et les poids, le volume quotidien total. La période de référence pour les indices est l'année 1956 et les indices représentent les prix exprimés en pourcentage des prix de 1956 recalculé sur la base 1961 = 100.

Les indices révisés sur la base 1956 = 100 ont été publiés pour la première fois dans la livraison de juin 1962 de cette publication. La modification la plus importante à la révision de l'indice, à part le changement de la période de référence, a été le classement des actions d'après la Classification des activités économiques. Dans le cas du grand groupe des valeurs industrielles, 4 sous-groupes (minoterie et céréales, aliments et produits connexes, machines et matériel et matériaux de construction) ont été remplacés par 8 nouveaux sous-groupes (aliments, imprimerie et édition, métaux primaires, produits métalliques, minéraux non métalliques, produits chimiques, construction et commerce de détail). On a conservé les 5 autres sous-groupes de l'ancien indice: mines industrielles, boissons, textiles et habillement, pâte et papiers, et huiles (sous la désignation de pétrole). Le grand groupe

ued but the Pipelines index was added as a sub-group and the previous Power and Traction sub-group was replaced by two new sub-groups, viz., Electric Power and Gas Distribution. A major group Finance was composed of the former major group Banks and the former supplementary index Investment and Loan. Constant weights which were previously limited to major groups, were extended to sub-groups. Weights in the index continue to be based on shares outstanding.

A revision of the Security Price Indexes to the 1971 = 100 base is under development.

For the list of stocks currently included in the Investors Index and Preferred Index, see *Prices and Price Indexes* for March 1974.

Residential and Non-Residential Building Construction Price Indexes

The fixed-weighted input price indexes of materials and wage rates for residential and non-residential building construction are being published here for the convenience of users (Table 20). A more complete description of the characteristics of the indexes appeared in the May 1970 issue of *Prices and Price Indexes*, and this explanation is available on request from the Prices Division, as is historical monthly data for the series.

Because the indexes measure the impact of price change on the materials and labour inputs to construction, and not the effects of changes in profit margins or productivity, there is thought to be an upward bias in these indexes as indicators of price change for the output of building construction, or buildings in place. Users are therefore warned to exercise caution in making use of the series, for this purpose. A comparison of these series with the implicit price deflators (1) providing an estimate of price change for the output of the industry, derived from the measurement of gross fixed capital formation in constant dollars, will provide some insight into the effects on the price movement of adjusting the fixed-weighted input indexes for changes in productivity and profit margins.

During the period from 1926-1966 a special sample or respondents supplied materials prices for the index. As of 1961 this sample has been replaced with prices from the ISPI system (2). The latter are published monthly in table 2 of this publication.

The Construction wage rate series is based on wage rate material supplied by the Labour Standards Branch, Dept. of Labour, and relates to minimum wages paid on government contracts for construction in a variety of trades and cities.

de services d'utilité publique a été conservé mais l'indice de pipelines a été ajouté comme sous-groupe et l'ancien sous-groupe d'énergie et traction a été remplacé par deux nouveaux sous-groupes: l'énergie électrique et la distribution du gaz. Le nouveau grand groupe "Finances" est composé de l'ancien grand groupe banques et de l'ancien indice supplémentaire investissements prêts. Les facteurs constants de pondération qui étaient autrefois limités aux grands groupes s'appliquent maintenant aux sous-groupes. Les facteurs de pondération de l'indice continuent à être basés sur les actions en circulation.

On prépare actuellement une révision des Indices des coûts des valeurs mobilières sur la base 1971 = 100.

La liste des titres repris actuellement dans les indices des valeurs de placements et dans les indices des valeurs privilégiées se trouve dans *Prix et indices des prix* de Mars 1974.

Indices des prix de la construction résidentielle et non résidentielle

Les indices à pondération fixe des prix des entrées de matériaux et de salaires dans la construction résidentielle et non résidentielle sont publiés ici pour faciliter la tâche aux utilisateurs (Tableau 20). On trouvera une description plus détaillée des caractéristiques des indices dans *Prices and Price Indexes* de mai 1970. On peut s'en procurer un exemplaire ainsi que les données mensuelles chronologiques sur cette série en s'adressant à la Division des prix.

Comme les indices mesurent l'influence des variations de prix sur les entrées de matériaux et de main-d'oeuvre du bâtiment plutôt que les répercussions des variations de marges bénéficiaires ou de productivité, on les croit surestimés en tant qu'indicateurs des variations de prix de la construction, ou des bâtiments construits. Les utilisateurs devront donc faire preuve de discernement quand ils se serviront des séries à cette fin. Si l'on compare ces séries avec les facteurs de dégonflement (1) des prix implicites (qui donnent une estimation de la variation du prix pour la production de l'industrie), obtenus en mesurant la formation brute de capital fixe en dollars constants, on aura un aperçu des effets de l'ajustement sur l'évolution des prix des indices à pondération fixe des entrées pour tenir compte des variations de productivité et des marges bénéficiaires.

Au cours de la période 1926-1966, un échantillon spécial d'enquêtés a donné les prix pour l'indice. En 1961, on a remplacé cet échantillon par les prix tirés du système I.P.V.I. (2). Ces prix sont publiés par mois dans le tableau 2 du présent bulletin.

La série consacrée au taux de rémunération dans l'industrie du bâtiment est basée sur les chiffres fournis par la Direction des normes du travail du ministère du Travail; elle a trait au salaire minimum versé aux termes de marchés signés avec le gouvernement pour des travaux de construction dans divers corps de métiers et dans diverses villes.

(1) Gross National Product Division, Statistics Canada.

(2) *Industry Selling Price Indexes 1956-1968 Catalogue* 62-528.

(1) Division du produit national brut, Statistique Canada.

(2) *Indices des prix de vente dans l'industrie, 1956-1968*, (62-528 au catalogue).

Users are reminded that the indexes were arithmetically rebased to the year 1961 = 100 and therefore combining the components with the weights as shown will not provide the composite index provided. Users able to provide their own weights for the components can recombine the components to suit their particular needs.

Basic Union Wage Rate Indexes for Major Construction Trades

Basic union wage rate indexes are prepared for 12 major construction trades in each of 14 cities in Canada. Weighted average city indexes are prepared as well as a 14 city composite. Indexes are released quarterly in summary form in Tables 21 and 22 of Prices and Price Indexes (Catalogue 62-002). This index is found in table 20 of Prices and Price Indexes (Catalogue 62-002). Full trade detail, by city, is published quarterly in the Construction Price Statistics Service Bulletin, (Catalogue 62-006).

Rates utilized in index calculations are derived mainly from the *Construction Collective Agreement Survey Service* provided by the Canadian Construction Association. These rates are supplemented as necessary by surveys of some union locals. While indexes containing supplementary benefits will be available soon, presently published indexes relate to basic union wage rates only. The rates indicate the rate of straight time compensation for one hour in the city specified. Rates converted into the form of ratios were combined into weighted average city indexes utilizing 1961 Census of Population data on numbers of people employed by trade and average earnings in the construction industry.

The base-weighted indexes provide an estimate of the impact of rate change on basic union wages for the major construction trades employed in a given city. Because union workers in cities tend to be engaged mainly in non-residential or commercial building construction and because rates for trades associated with engineering work were excluded from the price sample the indexes best approximate wage rate change for non-residential construction.

Highway Construction Price Indexes (1961 = 100) (3)

The Price Indexes of Highway Construction in Canada express prices paid by provincial governments in contracts awarded for highway construction each year, as a percentage of prices paid in 1961. The arithmetic conversion of the indexes to a 1961 time base does not change their percentage movements as compared to the previously published indexes to a 1956 = 100 time base. Users are warned that an aggregation of the converted major group indexes with the published weights will not yield the published 1961 = 100 all items indexes. The conversion does not create this problem for a user wishing to reweight the converted major group indexes using weights appropriate to this own purpose.

(3) The years refer to fiscal years. Thus 1968 refers to the period April 1, 1968 to March 31, 1969.

Nous rappelons aux utilisateurs que les indices ont été recalculés sur la base 1961 = 100 et qu'ils n'obtiendront pas l'indice synthétique fourni en combinant les éléments et les pondérations donnés. Les utilisateurs qui sont à même de fournir leur propre pondération pour les éléments peuvent procéder à leur propre combinaison adaptée à leurs besoins spécifiques.

Indices du salaire syndical de base dans les principaux corps de métiers

Les indices du salaire syndical de base portent sur les 12 principaux métiers de la construction dans 14 grandes villes canadiennes. On calcule les indices pondérés moyens pour chaque ville de même que l'indice synthétique des 14 villes. Les indices sont publiés chaque trimestre dans les Tableaux 21 et 22 de la publication *Prix et indices des prix* (n° 62-002 au catalogue). On peut trouver cet indice dans le tableau 20 de la publication *Prix et indices des prix* (no 62-002 au catalogue). Des données détaillées sur tous les métiers de la construction dans chaque ville sont publiés chaque trimestre dans le bulletin de service *Statistique des prix dans la construction* (n° 62-006 au catalogue).

Les taux utilisés dans le calcul des indices proviennent principalement de la publication *Construction Collective Agreement Survey Service* de l'Association canadienne de la construction. Des enquêtes auprès de certaines succursales de syndicats ont été menées lorsqu'il fallait disposer de taux supplémentaires. On publiera sous peu des indices contenant les avantages supplémentaires, mais les indices actuels portent uniquement sur le salaire syndical de base. Les taux correspondent à la rémunération normale pour une heure dans la ville en question. Les taux convertis en ratios ont été transformés en indices pondérés moyens des villes à partir des données tirées du recensement de la population de 1961 sur les effectifs de chaque métier et les gains moyens dans l'industrie de la construction.

Les indices pondérés permettent d'évaluer l'influence de la variation du taux des salaires syndicaux pour les principaux métiers de la construction dans une ville donnée. Étant donné que les travailleurs syndiqués dans les villes s'occupent surtout de la construction non résidentielle, ou commerciale, et que les taux des métiers relevant du génie civil n'ont pas été inclus dans l'échantillon des prix, les indices constituent la meilleure approximation des variations dans les taux de salaire dans la construction non résidentielle.

Indices des prix de la construction routière (1961 = 100) (3)

Les indices des prix de la construction routière au Canada représentent les prix payés chaque année par les administrations provinciales au titre des marchés de construction routière, en pourcentages des sommes payées en 1961. La conversion des indices à la base 1961 = 100 ne modifie pas leur évolution en pourcentages comparativement aux indices publiés précédemment et dont la base était 1956 = 100. Les utilisateurs ne doivent pas s'attendre à ce que le groupement des indices convertis des grands groupes et des pondérations publiées donne l'indice général publié (1961 = 100). Cette conversion ne pose aucun problème à l'utilisateur qui désire réviser la pondération des indices convertis des grands groupes en utilisant les poids adaptés à ses fins propres.

(3) Il s'agit d'exercices financiers. 1968 représente donc la période de 1er avril 1968 au 31 mars 1969.

Base-weighted indexes are published annually and measure, for the period 1956 to 1968, the effect of price change on the cost of specific programmes of highway construction in Canada represented by highway construction contracts of approximately \$50,000 or more awarded by specified provincial governments during the weight-base period. Weights of items in the index, representing the relative importance of units of construction in the year 1956 are held constant. Only the estimates of prices change from year to year, and the indexes thus measure the movement of prices through time. For a more complete statement of the problem of estimating price change for highway construction see pages vi & vii of the December 1967 issue of *Prices and Price Indexes*, Catalogue 62-002 and pages 9 & 10 of the reference paper *Price Indexes of Highway Construction* in Catalogue 62-520. The all-items index or its components are useful for planning and budgeting for highway construction programmes, in escalating or updating previously costed roadwork, in estimating replacement cost of previously completed roadwork, and as historical measurements of price trends in highway construction.

The indexes do not necessarily reflect the price movements of non-contract construction or maintenance work. The indexes are designed to measure price changes for a fixed programme of highway construction, in each of the seven provinces. Because price levels in the time base-period (1961) varied from province to province the indexes cannot be used to compare price differences between provinces, but only to compare differences in the rate at which prices are changing in the provinces.

Prices contained in the index are not for units of labour and materials as is usually the case in construction price indexes but rather for units of construction work put in place such as an acre of clearing, a cubic yard of earth excavation or a ton of bituminous hot-mix paving. In addition, the index contains prices of some materials, such as culvert pipe, usually supplied to the contractor by the highway departments. Prices of highway construction work are annual weighted averages of bid prices of units of construction in groups of contracts awarded, classified by price-determining characteristics of the contracts and the bid items such as volume of the bid item, type of contract and geographic location. Prices of material items of supply are prices paid by government departments to suppliers.

Price Indexes of Electric Utility Construction

In electric utility terms, the index is designed to provide an estimate of the impact of price change on the cost of materials, labour and equipment used in constructing and equipping electric utilities in a specified base period. The index provides an estimate of how much more, or less it would cost to reproduce the base-period programme of construction in another period, using the same construction technology as in the base period and assuming rates of profit and productivity in construction are the same in both periods.

Les indices pondérés en fonction de la base sont publiés chaque année; ils mesurent, pour la période allant de 1956 à 1968, l'influence de l'évolution des prix sur le coût des programmes spécifiques de construction de routes au Canada représenté par les marchés de construction de routes d'environ \$50,000 ou plus accordés par certaines administrations provinciales au cours de la période visée par la base de pondération. Les poids des éléments des indices qui représentent l'importance relative des unités de construction en 1956 sont constants. Seules les estimations de prix varient d'une année à l'autre; les indices mesurent donc l'évolution des prix dans le temps. Pour plus de détails sur l'estimation de l'évolution des prix pour la construction routière, se reporter aux pages vi et vii du numéro de décembre de *Prices and Price Indexes* (n° 62-002 au catalogue de Statistique Canada) et aux pages 9 et 10 du bulletin intitulé *Price Indexes of Highway Construction in Canada* (no 62-520 au catalogue de Statistique Canada). L'indice général ou ses éléments servent à la planification et à la budgétisation des programmes de construction routière, à indexer ou à mettre à jour les prix de travaux de routes effectués précédemment, à estimer le coût de remplacement des travaux routiers achevés précédemment et à mesurer chronologiquement l'évolution des prix de la construction routière.

Les indices ne reflètent pas nécessairement l'évolution des prix de la construction effectués hors marché ou des travaux d'entretien; ils servent à mesurer les variations de prix pour un programme déterminé de construction routière dans chacune des sept provinces. Au cours de la période qui a servi de base (1961), les niveaux de prix ont varié d'une province à l'autre; aussi, on ne peut utiliser les indices pour comparer des différences de prix entre les provinces mais on peut seulement les employer pour comparer les différences entre taux de variation des prix dans les provinces.

Les prix compris dans l'indice ne se rapportent pas aux unités de travail ni de matériaux comme c'est habituellement le cas dans l'indice des prix de la construction; ils se rapportent plutôt aux unités de travail de construction effectué, comme le défrichement d'une acre de terrain, l'excavation d'une verge cube ou l'épandage à chaud d'une tonne de béton bitumineux. En outre, l'indice comprend le prix de certain matériaux, par exemple, les tuyaux de ponceau fournis habituellement à l'entrepreneur par les ministères de la Voirie. Les prix des travaux de construction routière sont des moyennes pondérées des prix de soumission pour les unités de construction par groupe de marchés classés selon les caractéristiques des marchés qui déterminent le prix et les éléments d'offre tels que le volume de chaque poste, le type de marché et la situation géographique. Les prix de matériaux fournis sont les prix payés par le ministère aux fournisseurs.

Indices des prix à la construction dans les services d'électricité

En ce qui concerne les services d'électricité, l'indice a pour but de fournir une estimation des conséquences des variations de prix sur le coût des matériaux, de la main-d'oeuvre et du matériel utilisés dans la construction et l'équipement des services d'électricité au cours d'une période de référence donnée. L'indice sert à mesurer combien il faudrait payer en plus ou en moins pour réaliser un programme de construction identique à celui de la période de référence en utilisant les mêmes techniques de construction et en supposant que les taux de rentabilité et de productivité de la construction soient les mêmes pour les deux périodes.

As the market does not yield comparable selling prices for such unique transactions as, for example, the sale of a transmission line, it was not possible to produce an index of the prices of completed structures. Completed structure indexes would be appropriate for users wishing either to estimate reproduction costs or to deflate capital formation. The indexes introduced in this publication have certain short-comings. Nonetheless, they may be helpful for such purposes provided the users understand the deficiencies. Thus the reader is asked to make particular note of Section I, of Occasional Paper Catalogue 62-526 Price Indexes of Electrical Utility Construction - The Necessity for Compromise and Section XI, (of the same paper) Uses and Limitations. In addition, because particular construction projects are unique, the aggregate indexes will not likely be appropriate for specific projects since they relate to an average mix of materials, labour and equipment derived from a variety of projects in a specific base period. Thus, if the component price indexes and their weights included in the aggregate index presented herein are inappropriate for a particular purpose the user should consider selecting appropriate component indexes from among those published herein. These indexes could then be combined into an aggregate index by utilizing weights derived from the projects or assets to be costed or deflated.

Prices used in the indexes are for the most part selling prices reported monthly by manufacturers for materials or equipment. The price reported is for units and terms of sale representative of the volume sales of the manufacturer. Where sales to electric utilities form a small share of the total sales of the manufacturer, the price reported may not adequately represent the price to the construction trade and others directly involved in constructing and equipping electric utility facilities. In such cases, prices charged other manufacturers or wholesalers have been included in the index. Federal sales tax changes are reflected in the index but no adjustments have been made for provincial tax changes. Until December 1964 wage rate data were supplied by the Federal Department of Labour and represented minimum hourly rates paid to construction workers in major cities employed on federal government contracts. In 1965 union basic wage rates reported by major utilities and some contractors were incorporated into the index. The sample selected provides an estimate of wage rate change for urban on account and contract electric utility construction. Some other improvements will be made to improve the coverage relating to rural non-union work for transmission lines.

Construction has been defined as new construction or major reconstruction for distribution systems, transmission lines and transformation or switching stations. Maintenance and operating costs are excluded. Cost data were supplied by major utilities, relating to own account and to contract construction erected during the last half of the 1950's. The weights were derived from these data which indicated the relative importance of the major inputs to the construction. The components of cost relating to distribution and transmission facilities encompass such items as poles, hardware, conductors, insulators, meters, distribution transformers and

Comme il est impossible d'obtenir directement sur le marché des prix de vente comparables pour des opérations de caractère aussi unique, par exemple, que la vente d'une ligne de transport d'énergie, Statistique Canada n'a pu établir un indice du prix des installations en place. Un tel indice ne serait utile que si l'on désirait obtenir une estimation des sommes qu'il faudrait engager pour réaliser à nouveau un programme de construction identique ou encore pour dégonfler une formation de capital. Les indices publiés ici présentent en ce sens certaines lacunes. Ils peuvent néanmoins servir à de telles fins pourvu que les utilisateurs en comprennent les limites. Les lecteurs peuvent se rapporter aux Sections III et XI de la publication *Price Indexes of Electrical Utility Construction* (Statistique n° 62-526 au catalogue): "The Necessity for Compromise" et "Uses and Limitations". De plus, en raison du caractère unique de chaque projet de construction, l'indice synthétique ne pourra sans doute pas s'appliquer à un projet bien précis car il porte justement sur une moyenne des matériaux, de la main-d'oeuvre et du matériel utilisés dans la réalisation de plusieurs projets au cours d'une période de référence donnée. Ainsi, si les indices détaillés et les poids correspondants qui composent les indices synthétiques présentés ici ne conviennent pas à un usage bien précis, l'utilisateur pourra toujours se servir des autres indices détaillés et construire, à l'aide des coefficients de pondération, les indices de son choix, soit pour évaluer le coût d'un projet, soit pour établir des facteurs de dégonflement.

La plupart des prix des matériaux et du matériel utilisés pour établir les indices sont les prix de vente déclarés mensuellement par les fabricants. Ces prix sont représentatifs des unités de mesure et des conditions de vente valables pour les ventes en grande quantité de fabricants. Lorsque les ventes aux services électriques ne représentent qu'un faible pourcentage du chiffre d'affaire d'un fabricant, il est possible que le prix déclaré ne représente pas de façon satisfaisante le prix consenti aux entreprises en construction et aux autres industries s'occupant directement de construction et d'installation de services d'électricité. Dans ces cas, on a inclus dans l'indice les prix facturés aux autres fabricants ou grossistes. On a tenu compte, dans l'établissement de l'indice, des variations de la taxe de vente fédérale; toutefois, il n'a été fait aucun redressement pour les variations de taxe provinciale. Jusqu'en décembre 1964, les données sur les taux de rémunération étaient fournies par le ministère fédéral du Travail et représentaient le salaire horaire minimum versé aux personnes travaillant au titre d'un marché accordé par le gouvernement fédéral dans certaines grandes villes. En 1965, on fit entrer dans l'indice le salaire de base exigé par les syndicats et déclaré par les principaux services et par certains entrepreneurs. L'échantillon choisi représente donc une estimation des variations du taux de rémunération dans la construction en ville de services électriques pour compte propre ou au titre d'un marché. Certaines améliorations à l'indice sont prévues de façons à l'étendre aux personnes non syndiquées travaillant dans les régions rurales à la construction de lignes de transport d'énergie.

Le terme "construction" a été défini comme étant la construction neuve ou la réparation des réseaux de distribution, de lignes de transport d'énergie, de postes de transformation ou de postes de manœuvre. L'entretien et les frais d'exploitation ne sont pas compris. Les données sur les prix de revient sont fournies par les principaux services d'électricité et portent sur la construction exécutée pour compte propre ou au titre d'un marché au cours de la deuxième moitié des années cinquante. Les poids tirés de ces données représentent l'importance relative des principaux éléments entrant dans la construction. Les composantes du coût de la distribution et du transport comprennent certains éléments comme

expenditures for labour, e.g. - linemen and groundmen. Costs relating to construction equipment such as trucks, and components of equipment operating costs such as tires, gasoline and repairs were also included. Transformation and switching stations encompass some of the items listed above but the most important elements of cost relate to transformers and switching equipment. Expenditures for land and rights-of-way have been excluded.

The term Canadian electric utility has been defined to include municipal as well as nonmunicipal utilities but the majority of the cost data tabulated was derived from the major nonmunicipal utilities. Manufacturers who produce electricity for their own use and who may also sell electricity have been excluded from the cost survey.

Price Indexes of Hydro-electric Generating Stations

The following additional points may be of assistance to users of the hydro-electric generating stations index which was described in some detail in Statistics Canada Occasional Paper, Catalogue 62-533.

- (a) Wage rate data are derived from a variety of sources but mainly from the Canadian Construction Association surveys of union agreements and from Federal Pay Research Bureau studies of salaries paid professional, technical and clerical personnel. Basic wage rates, excluding fringe benefits, were used in index calculations.
- (b) Prices for ready-mix concrete and for earth and gravels in place have been utilized as replacements for input prices of labour, materials and equipment rental for concrete production and embankments in place.
- (c) Prices are included for some categories of expense not previously included in input price indexes for construction: interest during construction, overhead expense and the provision and operation of temporary camp accommodation.
- (d) Weighting patterns exclude expenditure for ancillary facilities for logging and navigation permanent houses, etc.

Price Indexes of Machinery and Equipment

In response to the need of users wishing either to correct expenditure data of machinery and equipment for price change or to make comparison of commodity movement, a system of machinery and equipment indexes has been under development for a number of years. This is a system of industry indexes relating to types of equipment purchases made by establishments belonging to industries as defined by the 1960 Standard Industrial Classification.

les poteaux, la quincaillerie, les conducteurs, les isolateurs, les compteurs, les transformateurs de distribution et les dépenses de main-d'oeuvre (monteurs, personnel de service, etc.). Les dépenses entraînées par le matériel de construction (camions et pièces d'équipement) et les frais d'exploitation (pneus, essence et réparations) sont également inclus. Les postes de transformation et les postes de transformation et les postes de manœuvre comprennent certains des éléments ci-dessus; les frais les plus importants sont cependant entraînés par les transformateurs et les appareils de connexion. Les dépenses foncières et les droits de passage ont été exclus.

Par définition, l'expression "service d'électricité canadien" englobe aussi bien les services municipaux que les autres; toutefois, la majeure partie des données de coût ont été tirées des déclarations des services non municipaux. Les fabricants qui produisent de l'électricité destinée à l'auto-consommation et qui peuvent également vendre de l'électricité ont été exclus de cette enquête.

Indices de prix des centrales hydroélectriques

Les points supplémentaires ci-après peuvent aider les utilisateurs de l'indice de centrales hydroélectriques décrit en détail dans le bulletin hors-série de Statistique Canada portant n° 62-533 au catalogue.

- a) Les données sur le taux de rémunération proviennent de diverses sources et surtout des enquêtes sur les accords syndicaux de l'Association canadienne de la construction et des études du Bureau de recherche sur les traitements portant sur la rémunération des travailleurs intellectuels des techniciens et du personnel administratif. Pour le calcul de l'indice, on a utilisé les taux de rémunération de base, avantages sociaux non compris.
- b) Au lieu du prix des entrées de main-d'oeuvre, de matériaux et de location de matériel pour la production de béton et des remblais effectués, on a utilisé le prix du béton préparé et celui de la terre et du gravier en place.
- c) L'indice comprend les prix correspondant à certains postes de dépenses qui n'étaient pas repris auparavant dans les indices de prix des entrées dans la construction: intérêt pendant la construction, frais généraux, fourniture et entretien de barraquements temporaires.
- d) Les facteurs de pondération ne comprennent pas les dépenses affectées aux installations auxiliaires pour l'exploitation forestière et la navigation, les maisons permanentes, etc.

Indices des prix des machines et du matériel

Afin de répondre au besoin des utilisateurs qui désirent réviser les données sur les dépenses en machines et en matériel, en fonction des changements de prix ou établir une comparaison du mouvement des marchandises, on prépare depuis un certain nombre d'années un système d'indices des prix des machines et du matériel. Il s'agit d'un système d'indices par industrie ayant trait aux genres d'achats de matériel des établissements qui font partie des industries définies dans la Classification type des industries de 1960.

The base-weighted indexes give an estimate of how much more, or less, it would cost today to purchase a group of machines specified for a particular base period.

The interim time base for the indexes is 1968 = 100 and most of the data from which weighting patterns were derived came from 1968 or nearby years. Such data were usually supplied by major purchasers.

Conceptually purchasers' prices should be utilized in such indexes but because of a number of practical problems, manufacturers' selling prices were usually used. Such prices were then corrected as relevant for duty, exchange and federal sales tax.

Foreign prices utilized in the index are either U.S. Bureau of Labour Statistics commodity indexes or Prices Division collections from manufacturers most of whom reside in the United States.

The first industry index was released mid-1971 and related to purchases by the construction industry. Indexes for other industries will be released from time to time as they become available. In the interim preliminary indexes for a number of other industries are available on request. Certain commodity indexes which exclude adjustments for exchange, duty and federal sales tax can also be provided on request.

Les indices pondérés en fonction de la base donnent une estimation de la différence du prix d'achat d'un groupe de machines déterminé pour une période de base donnée.

La base provisoire pour les indices est 1968 = 100. La plupart des données dont on a extrait les facteurs de pondération dataient de 1968 environ. D'habitude, ces données étaient fournies par les principaux acheteurs.

Du point de vue conceptuel, on devrait utiliser les prix des acheteurs dans ce genre d'indices, mais on a habituellement employé les prix de vente de fabricants pour des questions d'ordre pratique. On a ensuite apporté à ces prix les corrections appropriées pour les droits de douane, le change et la taxe de vente fédérale.

Les prix étrangers utilisés dans l'indice sont les indices de prix des marchandises du *U.S. Bureau of Labour Statistics* ou ceux que la Division des prix a recueillis auprès des fabricants dont la majorité réside aux États-Unis.

Le premier indice par industrie a été publié au milieu de 1971; il se rapporte aux achats de l'industrie de la construction. Les indices des autres industries seront publiés de temps à autre, à mesure qu'ils seront disponibles. En attendant, on peut obtenir sur demande les indices préliminaires pour un certain nombre d'autres industries. Il en est de même pour certains indices de prix de marchandises, compte non tenu des ajustements pour le change, les droits de douane et la taxe de vente fédérale.
